

MEDHAVA

Capability benchmark

The 56 products the owner supplied, in his order, and what this project has against each.

Read this part first

56 of the 56 pages were not read. This environment's egress proxy refuses every host outside a short allowlist. Measured, not assumed:

Host	Result
<code>www.zoho.com</code>	CONNECT refused — 403 at the gateway
<code>zoho.com</code>	CONNECT refused
<code>www.bigin.com</code>	CONNECT refused
<code>en.wikipedia.org</code>	CONNECT refused
<code>api.github.com</code>	200
<code>registry.npmjs.org</code>	200

The shell and the fetch tool take the same proxy, so there is no route to those pages from here at all. This is a network policy on the environment, not a missing connector: nothing can be installed that changes it.

So each row separates three kinds of statement, and a gate keeps them apart:

- **Sourced** — the URL and the product name, from the owner's own message.
- **Derived** — which apps this project names, and the rung each has reached. Read from the registers by `checkzoho.js`, never typed.
- **Inferred** — what the other product does. This is recollection, not the page.

`checkzoho.js` refuses any row that states what a page claims without recording the day somebody read it. That rule is the whole point: an essay about competitors written from memory and formatted as a comparison table looks exactly like a benchmark and is worth nothing.

There is no MUST / SHOULD / FUTURE column. Ranking what to build next against pages nobody read would be a priority invented to fill a column. What to build next is in `BUILD_QUEUE.md`, ordered by what this project can

verify about itself.

What the comparison does establish

Our own coverage, which is answered entirely by our own register and survives the unread pages intact.

Verdict	Count	Meaning
COVERED	30	this project names at least one app for it. Whether it matches in DEPTH is unknown and needs the page.
NO APP	20	this project names none.
OUT OF SCOPE	6	deliberately not part of this product, with the reason stated.

Of the 30 covered, **11 have at least one app that is implemented or tested**. The other 19 are covered on paper: named in the module register, not standing up.

Every row

Product	Verdict	This project names	Rung	Why
Books	COVERED	Accounting, Invoicing, Finance Reports, GST & Tax	SPECIFIED	Bookkeeping, invoicing and statutory returns are all named apps here. Not one of the four is built: a posted sale writes its own balanced ledger entry, and nothing reads those entries back as books.
CRM	COVERED	CRM & Customer 360	TESTED	Lead to won and the lifetime after it, in one record.
Begin	COVERED	CRM & Customer 360	TESTED	A smaller packaging of the same capability class. Packaging is a pricing decision, not a second capability.
POS	COVERED	POS	TESTED	Counter billing drawing on the same stock number as every other channel.
Forms	COVERED	Forms & Feedback (NPS)	SPECIFIED	Forms are named, tied to the record they are about rather than standing alone.
Bookings	NO APP	—	—	Appointment scheduling against somebody's availability is named nowhere in the 22 modules. A trade that sells time rather than goods has nothing here.
Campaigns	COVERED	Campaigns	SPECIFIED	Email campaigns to a list are named in module 17, beside the automation that triggers them and the CRM record the list is drawn from.
Social	COVERED	Social Calendar, Publisher	SPECIFIED	Scheduling and publishing across social channels are both named.
Marketing Automation	COVERED	Automation, Campaigns	SPECIFIED	Named in module 17 beside the campaigns it automates.
Sites	COVERED	Website & Page Builder, Blog & Pages	SPECIFIED	A site builder and the pages it publishes are both named.
LandingPage	COVERED	Website & Page Builder	SPECIFIED	Maps to the same app as Sites. Whether a landing page needs its own builder — with the split testing that usually justifies one — is a depth question the page would answer and this environment cannot reach.
Commerce	COVERED	Channels & Storefronts, D2C Sales, Catalog / PIM	TESTED	A storefront, its orders and the catalogue behind it are all named, and the orders half runs on the real database.

Product	Verdict	This project names	Rung	Why
Vikra Seller	COVERED	Marketplace OMS, Listing & Catalog Manager	TESTED	Selling through somebody else's marketplace is module 15's subject.
Desk	COVERED	Helpdesk & Live Chat, Knowledge Base	TESTED	Tickets tied to the order they are about, and the knowledge base beside them.
SalesIQ	COVERED	Helpdesk & Live Chat	TESTED	Live chat is named. Website visitor tracking and lead scoring from browsing behaviour are named nowhere, so this is covered at the name and probably not at the depth — which is exactly the distinction the unread pages would settle.
Field Service Management	NO APP	—	—	Dispatching a technician to a site, with the job, the parts and the visit, is named nowhere. A service trade has nothing here.
Lens	NO APP	—	—	Remote assistance over a camera. AR / Virtual Try-On is a customer-facing fitting tool and is not the same capability.
Solo	OUT OF SCOPE	—	—	A bundle for a one-person business. This product is built around a company being a row and a group being the sum of them; a single-person packaging is a pricing decision, not a capability to build.
Expense	COVERED	Expenses	SPECIFIED	Claiming, approving and posting a staff expense is named in module 12, and the advance a worker takes against pay is tracked separately in module 16 as a balance beside pay rather than a term inside it.
Payroll	COVERED	Staff & Contractors, Payout Execution, Time-off & Advances	SPECIFIED	Module 16 names the roster, the leave and advances beside it, and the payout.
Inventory	COVERED	Stock, Catalog / PIM, Kit & Combo SKU	TESTED	One quantity per SKU per location per stage, and it runs on the real database.
ERP	COVERED	Identity, Settings & Audit, Industry Packs	SPECIFIED	The whole-product comparison rather than a capability. What it is really asking is whether one system spans the business, which is what the 22 modules claim and what the requirements registry measures honestly.
Billing	COVERED	Subscriptions, Invoicing	SPECIFIED	A schedule that raises its own invoice and chases a failed payment is named.

Product	Verdict	This project names	Rung	Why
Procurement	COVERED	Procurement, Vendor Management	TESTED	Named in module 07, and both are browser apps today.
Spend	COVERED	Expenses, Budget vs Actual, Open-to-Buy / Budget Ceiling	SPECIFIED	Spend against a ceiling is named in three places, including the one that stops a purchase order rather than reporting on it afterwards.
Invoice	COVERED	Invoicing	SPECIFIED	Raising an invoice is named in module 12 and shares its numbering, tax setup and ledger posting with every other way this system sells — which is the point of it not being a separate product.
Practice	OUT OF SCOPE	—	—	A practice-management tool for an accounting firm handling many clients' books. This product keeps one business's own books across its own companies. Serving other people's books is a different product with a different isolation model.
Checkout	NO APP	—	—	A hosted payment page somebody sends a customer to. Orders are named; the checkout that collects the money is not.
Payments	NO APP	—	—	Payment Data Scope states which systems may ever see a card credential, which is a policy about payments and not a payments product. Taking money is named nowhere, and it is blocked besides: it needs live credentials this repository must never hold.
Connect	COVERED	Forum, Discuss	SPECIFIED	An internal place to talk, named twice in module 20.
Vani	NO APP	—	—	Contextual comments left on a document or a page. Documents are filed against the record they belong to; annotating them in place is named nowhere.
TeamInbox	NO APP	—	—	A shared mailbox several people answer from. Communications sends outward; nothing here receives into a queue a team works through.
Sheet	NO APP	—	—	A spreadsheet. Excel Dashboard Builder reads workbooks; it is not one.
Show	NO APP	—	—	Building and presenting slides. Named nowhere in the 22 modules, and nothing here is adjacent to it — the documents this system produces are ledgers, bills and packing slips, which are printed rather than presented.

Product	Verdict	This project names	Rung	Why
Office Suite	OUT OF SCOPE	—	—	A word processor, spreadsheet and presentation tool. This is a system for running a business's operations, and building an office suite beside it would be the widest possible way to be shallow everywhere.
ToDo	NO APP	—	—	A personal task list. Approvals and Projects & Cases are work assigned through a process, which is not the same thing as somebody's own list.
PDF Editor	NO APP	—	—	Ask & Print produces PDFs and Documents & eSign files them. Editing a PDF that arrived from somewhere else is named nowhere.
People	COVERED	Staff & Contractors, Time-off & Advances, Appraisal & Hiring	SPECIFIED	The employee record, leave, and appraisal are all named in module 16.
Recruit	COVERED	Recruitment	SPECIFIED	Hiring is named in module 16 as its own app beside the appraisal cycle, so a candidate becomes an employee record rather than being re-entered.
Shifts	NO APP	—	—	Building a rota and publishing it to staff is named nowhere, which is a real hole for a business whose floor runs in shifts — attendance is captured, and the schedule it is measured against is not.
Workerly	OUT OF SCOPE	—	—	For a staffing agency placing temporary workers with client companies. This product employs its own people; placing them elsewhere is a different business.
Vault	OUT OF SCOPE	—	—	A password manager, and the one competitor capability this product refuses on purpose. Its standing promise is that it will never ask for a marketplace, bank or account password; storing them would contradict the promise directly. This is a difference to state out loud rather than a gap to close.
Directory	COVERED	Identity, Settings & Audit	SPECIFIED	Users, roles and permissions are named. Single sign-on and syncing against an outside identity provider are not, so this is covered at the name and thin under it.
Creator	NO APP	—	—	Building an application without code. The requirements registry carries this as CAP-STUDIO, NOT STARTED: packs configure vocabulary and fields, and let nobody build a screen.

Product	Verdict	This project names	Rung	Why
Catalyst	NO APP	—	—	A developer platform to build and host services on. Carried as CAP-DEVPLATFORM, NOT STARTED — the internal API is four routes for two modules, with no versioning, no keys and no webhooks.
ManageEngine SaaS Management	OUT OF SCOPE	—	—	Governing which SaaS subscriptions a company's IT department pays for. That is an IT-department product, not part of running the operations of the business.
Analytics	COVERED	Report Builder, CEO Dashboard	TESTED	Both are named and both open in a browser. Neither queries the database: the registry carries CAP-ANALYTICS as SPECIFIED, and the prototype computes over an in-page store.
DataPrep	NO APP	—	—	Cleaning and reshaping data before it is analysed. Master-Data Hygiene finds duplicates among customers, vendors and designs; it is not a transformation tool.
Analytics — embedded	NO APP	—	—	Putting somebody else's dashboards inside your own product under your own brand. That needs the developer platform this project has not started.
Analytics — dashboard builder	COVERED	CEO Dashboard, Report Builder, Excel Dashboard Builder	TESTED	Three named apps, two of them browser prototypes today.
Projects	COVERED	Projects & Cases, Timesheets & Planning	SPECIFIED	Named in module 20 with the time recorded against them.
Sprints	NO APP	—	—	Agile iteration planning. Projects & Cases is not the same shape and does not claim to be.
BugTracker	NO APP	—	—	Tracking defects in software. Quality Control inspects goods, not code.
Digital Adoption Platform	NO APP	—	—	In-product walkthroughs teaching people to use the software. Named nowhere, and worth noticing for a system whose users are a shop floor.
Vertical Solutions Studio	NO APP	—	—	Building an industry-specific application on the platform. Industry Packs are the nearest thing and are deliberately narrower — a pack may rename, extend and switch discretionary rules off, and may never invent a concept or carry code.
One	COVERED	Identity, Settings & Audit	SPECIFIED	The bundle of everything above under one account. Its comparison here is the whole requirements

Product	Verdict	This project names	Rung	Why
				registry, not a single app.

The one refused on purpose

Vault — A password manager, and the one competitor capability this product refuses on purpose. Its standing promise is that it will never ask for a marketplace, bank or account password; storing them would contradict the promise directly. This is a difference to state out loud rather than a gap to close.

Every other OUT OF SCOPE row is a product for a different kind of business. This one is a capability this project could build and will not, and it is worth saying out loud rather than leaving in a table: a difference stated is a position, and a difference buried is a gap.

Where every number here comes from

Nothing in this document is typed. It is generated by `node brand/delivery/website/mkaudit.js` and every figure is read at that moment from the register that owns it:

Fact	Register	Gate
modules and apps	<code>brand/site/modules.js</code>	<code>checkneutral.js</code> , <code>checkshape.js</code>
what each has reached	<code>brand/site/registry.js</code>	<code>checkregistry.js</code>
the 0–5 score and the queue	<code>brand/site/audit.js</code>	<code>checkaudit.js</code>
the capability comparison	<code>brand/site/zoho.js</code>	<code>checkzoho.js</code>
rules and their proofs	<code>brand/site/rules.js</code>	<code>checkrules.js</code>
recorded runs	<code>docs/verification/EVIDENCE.md</code>	<code>tools/evidence.js --check</code>

A figure in this document that disagrees with its register means the document is stale. Regenerate it; `npm test` refuses a stale one.

Every technical word above, in plain language

14 words. Every technical term this document uses, in plain language, with an everyday comparison. Nothing here assumes you already know any of them.

platform

One piece of software that many separate businesses use at the same time, each seeing only its own information.

Ek badi building jisme bahut saare offices hain. Building ek hai, par har office ki chaabi alag — koi kisi aur ke office mein nahin ghus sakta.

module

One area of work in the system — sales, purchase, staff, accounts. Each is a set of screens that belong together.

Dukaan ke alag-alag counters. Ek counter bikri ka, ek kharidi ka, ek hisaab-kitaab ka.

industry pack

A settings file that teaches the system your trade — what you call things, the stages your work moves through, the documents you issue.

Ek hi machine, alag-alag saancha. Saancha badal do, wahi machine doosri cheez banane lagti hai.

database

Where all the information is kept, arranged so any of it can be found instantly and nothing gets lost.

Ek badi almari jisme har cheez apne fix khaane mein rakhi hai — dhoondhne ke liye poori almari palatni nahin padti.

table

One kind of information inside the database — all your customers in one, all your orders in another.

Almari ka ek khaana. Ek khaane mein sirf customers, doosre mein sirf orders.

row

One single record — one customer, one order, one payment.

Register mein ek line. Ek line matlab ek entry.

API

The agreed way two pieces of software talk to each other, so one can ask the other for something and get a predictable answer.

Waiter. Aap kitchen mein nahin jaate — waiter ko order dete ho, wahi khaana le aata hai. Waiter badal jaaye toh bhi order dene ka tarika wahi rehta hai.

queue

A waiting line for work that does not have to finish this second — sending a hundred messages, building a big report.

Darzi ki dukaan ka parchi system. Kaam parchi pe likh ke lag gaya line mein; customer khada intezaar nahin karta.

job

One piece of work taken off the queue and done in the background.

Line mein se uthayi gayi ek parchi, ab uska kaam ho raha hai.

environment

A separate running copy of the system — one for trying things, one that customers actually use.

Rehearsal aur asli show. Practice alag jagah, taaki galti sabke saamne na ho.

model

The piece of artificial intelligence that reads or writes text, tags a photograph, or answers a question.

Ek bahut padha-likha assistant. Kaam accha karta hai, par har baat pe usse poochho toh kharcha aur waqt dono lagta hai.

provider

A company whose service the system uses — for messages, for payments, for artificial intelligence, for delivery.

Supplier. Ek supplier maal na de toh doosre se le lo — kaam nahin rukna chahiye.

role

What a person is allowed to see and do — a manager sees more than a counter staff member.

Chaabi ka guccha. Manager ke paas zyada chaabiyaan, staff ke paas kam.

permission

One specific thing a role is allowed to do, like approving a discount or viewing salaries.

Guchhe ki ek chaabi. Ek chaabi ek darwaza.
