Purchase is live — Procurement + Vendor
Management →

Run the whole ethnic wear house on one system

Mill to marketplace in one application. The metre you bought, the karigar who stitched it, the design that sold on Myntra, the return that came back damaged and the GST on all of it — one record, one stock number, one set of books. Nothing re-keyed between them.

Start free for 30 days

Book a demo

- ✓ Free for 30 days

- ✓ Works with the internet off
- ✓ GST, TDS & TCS ready

20

Modules, one login

98

Apps over one data core

1

Stock number for every SKU

7

Marketplaces connected

WHAT MEDHAVA IS

One application. Not eleven that talk to each other.

Every other suite sells you separate products and a sync job between them. Medhava is a single application over one set of records — so there is nothing to synchronise, and nothing to reconcile.

1

Enter it once

A goods receipt, a counter sale, a marketplace order — recorded in one place. Stock, the ledger, the quality record and the supplier scorecard all update in the same instant, because they are reading the same record.

2

Numbers that cannot disagree

One stock figure per SKU. One ledger. One order record. Not a copy per channel that somebody reconciles on Saturday. When the website says four are left, four are left.

3

Built for how India actually runs

GST with input credit on accepted goods, TDS and TCS, seven marketplaces, piece-rate karigar wages — and apps that keep working when the internet does not.

WHAT CHANGES FOR YOU

The same day, before and after

Nothing here is a new way to run your business. It is the work you already do, arranged so that it only has to be done once.

TODAY

- ✗ Log into seven seller panels, one at a time
- ✗ Copy each order into a sheet, then into the books
- ✗ Guess which stock figure is the real one
- ✗ Learn at month-end that a mill over-billed you
- ✗ Chase a marketplace shortfall you spotted six weeks late
- ✗ Ask three people for their file before you can see one number

WITH MEDHAHA

- ✓ One queue, sorted by whichever order is closest to being late
- ✓ The order writes itself into stock and into the ledger
- ✓ There is one stock figure, so there is nothing to choose between
- ✓ An over-billed invoice cannot be paid — the match refuses it
- ✓ Every shortfall is on a screen the day the payout lands
- ✓ Open the dashboard. It was already up to date.

Medhava at a glance

What it is	A unified ERP: 20 modules and 98 apps sharing one data core and one event bus.
Shared data core	Item/SKU · Party · Stock · Ledger & Voucher · Order — every module reads and writes these.
Key difference	Not a suite of integrated apps. One application, so there is no sync step and no duplicate master data.
Compliance	Double-entry accounting with CGST/SGST/IGST, TDS, TCS, ITC on accepted goods, GSTR-1 and GSTR-3B.
Channels	Amazon, Flipkart, Myntra, Meesho, Ajio, Nykaa, JioMart, plus Shopify and WooCommerce.
Security	PostgreSQL row-level security per company; integrations use revocable scoped API keys in an AES-256-GCM vault — never account passwords.
Deployment	Hosted multi-tenant cloud, or single-file offline apps that run by double-clicking with no install.

THE PROBLEM

Your business runs on eleven tools that don't talk

Accounting in one place, stock in a spreadsheet, marketplace orders in seven seller panels, karigar wages in a notebook. Every month-end becomes an archaeology project.

Numbers that disagree

Stock says 40, the marketplace says 12, the books say something else again. Nobody knows which is right, so everyone guesses.

Work entered three times

The same invoice keyed into the seller panel, the spreadsheet and the accounting package. Three chances to be wrong.

Money quietly leaking

Over-billed purchases, unclaimed marketplace shortfalls, RTO losses — invisible until the year is over.

HOW IT WORKS

One data core. One action cascades everywhere.

Every module reads and writes the same five entities. That is the physical reason a single goods receipt can touch stock, books, quality and sourcing at the same instant.

Accepted — not ordered — is what counts

You order 100 metres. 100 arrive. Quality accepts 96. Most systems increase stock by 100 and claim tax credit on 100. Medhava increases stock by **96**, claims input tax credit on **96**, raises a debit note for the 4 rejected, and lowers that mill's accept rate — automatically.

Nothing derived is ever stored

Outstanding, risk, performance, ageing, profit per product — all recomputed on read. They cannot drift out of step with the documents underneath them.

MODULES & APPS

20 modules. 98 apps. One login.

 Identity, Settings & Audit

 Ask & Print

 Communications

 Data Privacy & Consent

 Payment Data Scope

Identity, Settings & Audit

Users, roles and permissions, company switching, tax and numbering setup — and an immutable record of everything that ever happened.

Ask & Print

At an exhibition in Hyderabad, send one line from your phone: “ledger Kalamandir”, “print slips”. It comes back as a PDF, or it prints at the Surat office — with nothing plugged into your phone and nothing at the office open to the internet.

Communications

WhatsApp commands and broadcasts, email and SMS, and the handful of scheduled jobs that carry a nudge to the right person without anyone remembering to send it. Every capability here has more than one interchangeable provider — none of them is ever the source of a figure the business reports.

Data Privacy & Consent

What a person's data may be used for, captured as consent at the point it is given and honoured everywhere downstream — including the right to have it corrected or removed. Retention (how long a record is kept) and deletion (a person's right to have their own data removed) are two different policies, tracked separately, because a rule that keeps records for the law and a request from a person to be forgotten do not resolve the same way.

Payment Data Scope

A written statement of exactly which systems ever see a card or bank credential, and which never do — because every card-capable screen in this system hands that moment to a payment provider's own secured field and never stores or even passes the number through application code. The statement is what an auditor or a partner asks for before they will connect to this system.

A style exists on paper before it exists as stock

A product moves from a first idea to something the business can actually make and sell — specification, sample rounds, costed trials and sign-off — before it is ever entered as a catalog record. Building this first means Inventory & Catalog never has to invent a style it has no real specification for.

- PLM & Development
- Design / IP Register

PLM & Development

Concept to a design that can actually be made: fabric and trim specification, sample rounds with the mill, costed trials against a target price, and sign-off — every version kept, so last season’s costing is still there.

Design / IP Register

What protects a design once it exists — trademark or copyright status, the date it was first shown, and a flag the moment a near-identical listing turns up elsewhere. Every version already kept by PLM & Development gets a filed status here instead of just a date stamp, because a design with no ownership record on file is a design nobody can defend.

One stock number everyone trusts

The most important number in the house: one quantity per design and size, per godown, per stage — greige, dyed, in stitching, finished, listed. Read and written by every other module. And one product record every marketplace lists from.

- Stock
- Catalog / PIM
- Kit & Combo SKU
- Master-Data Hygiene

Stock

Live quantity by design, size and location, fabric in metres and pieces in numbers, with reorder alerts, lot tracking, set kits and dead-stock ageing.

Kit & Combo SKU

A sellable SKU made of component SKUs — a three-piece set sold as one listing. Selling the kit decrements each component at order time, so stock is right for every piece in the set, not just the set itself.

Codes mapped on every live panel

95%

Size and weight on file

98%

Catalog / PIM

One record per design — fabric, work, length, colour, size chart, images, HSN, MRP and what each panel actually sells it at — scored for Myntra and Amazon readiness before it lists. It also carries the two things everything downstream needs: the code each panel knows the design by, mapped to yours, and the packed size and weight that decide the courier rate and settle every weight dispute. Every listing’s state on every panel is here too — live, waiting for approval, blocked, archived — with the quality score that decides whether anyone sees it.

Master-Data Hygiene

Duplicate detection and merge across customers, vendors and designs, and a dead-stock register for what has not moved in months. Protects every downstream report from the same record existing twice under two names.

Know every boutique, chain and customer completely

One record per party — a Kalamandir or a Rajmandir, a Surat walk-in or a Myntra buyer — carrying every enquiry, order, return, agreement and conversation, whichever channel it arrived on.

- Forms & Feedback (NPS)

CRM & Customer 360

Enquiry to confirmed order, then the full lifetime: what they bought, what came back, what they are worth and which new range to show them first.

Helpdesk & Live Chat

A boutique asking where its parcel is, or a customer asking about a size — the question becomes a ticket tied to the order, with the whole history already open.

Documents & eSign

Mill agreements, job-work contracts, signed delivery challans, export documents and boutique credit terms filed against the party or order they belong to — found by that record, not by hunting through a folder.

Forms & Feedback (NPS)

A short form after delivery, and the score it produces attached to the design or item it is actually about — not just the buyer — so a complaint-prone item surfaces as a pattern instead of a scatter of individual gripes.

Sales

MODULE 05

7 APPS

Counter, wholesale, website and export — one order book

The Surat counter, the boutique wholesale book, the website and the export shipment all write to the same order and draw on the same stock number. And the parcel is followed to the door, because a sale is not done until the COD money is in.

D2C Sales

Orders from your own storefront, cart to dispatch, with loyalty and partial COD on a ₹4,400 anarkali.

Export

Commercial invoice, packing list, LUT bond and IGST-refund tracking for the Gulf and UK buyers.

Quotes & Proforma

Send a quote, convert it to a confirmed order in one click.

Subscriptions

A schedule that raises its own invoice on its cycle and follows up on its own when a payment fails — for anything sold as a standing order rather than a one-off.

B2B & Credit

Boutique and chain orders on credit limits and tier pricing, with outstanding aged against each party's own agreed terms.

POS

Counter billing at Udhna that draws on the same stock as the website — no second stock register.

Couriers & AWB

Book the parcel on the order, compare couriers for that pin code, print the label with the design code on it, and follow the AWB to the door.

Planning & Requirements (MRP)

MODULE 06

3 APPS

Turn what is selling into what to buy and make

Confirmed orders and demand history have to become a plan before Purchase can buy anything or Manufacturing can start anything — otherwise buying and making are both just guessing. This module sits between the two: it reads what is actually selling and what is already committed, and turns that into requirement, not the other way around.

- Demand Forecast & Signal
- Requirement Explosion (MRP run)
- Open-to-Buy / Budget Ceiling

Demand Forecast & Signal

What sold, by SKU and by period, turned into a short-term forecast — the number every requisition and every production order downstream is measured against instead of a guess.

Requirement Explosion (MRP run)

Confirmed demand exploded through the bill of materials into what raw material to buy and what to produce, and by when — so a purchase requisition or a production order always traces back to real demand, never to a feeling that stock is getting low.

Open-to-Buy / Budget Ceiling

A spending ceiling set per period regardless of what the demand signal suggests, so a real signal cannot on its own commit more money than the business has decided to risk this season. Every requisition the MRP run drafts is checked against what is left of the ceiling before it goes to Purchase.

Purchase

MODULE 07

3 APPS

Nothing over-billed by a mill gets paid

The buy side end to end — mills, dyers, job workers and packing suppliers — with the control that stops you paying for metres you rejected.

Three-way match · nothing over-billed is paid

Quality & Compliance

- Production Orders
- Piece-rate & Contractors
- BOM & Consumption
- Maintenance

Production Orders

Cutting, stitching, embroidery, washing, finishing and checking — your own stages, with work-in-progress visible at each and nothing lost at the dyer.

BOM & Consumption

What each design consumes — metres of fabric, zari, lining, buttons, packing — costed at today's mill rates.

Piece-rate & Contractors

Karigars paid by the piece: pooled set completion, per-garment rates, alterations, rework and advances resolved into one payout.

Maintenance

Machines and the building: what is due for service, when it was last done, what it cost, and what stopped while it was down.

Quality & Compliance

MODULE 09

2 APPS

Certify what was received and what was made

Quality inspection used to live buried as one step inside Manufacturing; it stands on its own here because a rejection at goods-receipt and a rejection on the production floor are the same discipline, and because the certificates a business holds — the proof it follows a standard — belong next to the inspections that back them up, not scattered across email.

READS FROM

Purchase

Manufacturing

WRITES TO

Purchase

Manufacturing

Inventory & Catalog

✓ Quality Control

Accept, reject or send for rework, with reasons that feed the mill's accept rate and the karigar's record.

📄 Certificate & Compliance Register

Every standard the business or a vendor holds — a safety, labour or environmental certification — with its issue date, its expiry, and the audit that backs it, so a certificate about to lapse is visible before a buyer asks for it and finds it already expired. What this register tracks is what a sustainability report downstream is actually built from.

- 📄 COD Remittance
- ✓ Handover & Manifest
- 🚚 Fleet

**Rates & Zones**

Every courier’s rate card by zone, weight slab and service — so the cheapest and the fastest option for this parcel are both known before it is booked.

**COD Remittance**

What the courier collected at the door against what reached the Surat account, parcel by parcel, with every shortfall named and aged.

**Fleet**

Your own delivery vehicles, if you run any — what each trip cost, what is due for service, and what that adds to freight. Optional; most businesses run couriers only.

**NDR & RTO Rescue**

A failed delivery worked while it can still be saved — reattempt, call, correct the address — before it becomes a return you pay for twice.

**Handover & Manifest**

What is expected out today against what the pickup boy actually took, per courier and per service. The manifest to hand him, the one-time code to confirm it, and a signed note of what was left behind — so a parcel lost between the packing table and the van has an owner.

 Accounting & GST

MODULE 12

9 APPS

Books that always balance — and no BUSY needed

A full double-entry ledger built for Indian compliance, keeping the books itself. B2B sales, returns, mill purchases, payments and receipts are entered by hand because a person decides them; every website, marketplace and counter sale posts itself.

WRITES TO

Finance Reports

Treasury & Financial Planning

 Accounting

 Invoicing

 Expenses

 GST & Tax

 ITC Reconciliation

 Receivables, Payables & PDC

 Fixed Assets & Depreciation

 Year-End Close & Period Lock

 Finance Reports

**Accounting**

Double-entry books where every voucher balances and the trial balance always ties.

**Invoicing**

GST tax invoices and receipts, worked out from the lines to the paise. Where a panel raises its own invoice you keep both numbers on the order — theirs and your own series — so the panel’s paperwork and your books point at the same sale.

**Expenses**

Spend captured by category with approvals, and bill OCR to save typing.

**GST & Tax**

CGST, SGST, IGST, TDS, TCS, input credit, GSTR-1 and GSTR-3B — filed per registration, so a group where one company is registered and another is not files exactly what each one owes and nothing it does not.

**ITC Reconciliation**

Every input credit matched against the government’s own GSTR-2A/2B before a return is filed, so a credit claimed is a credit that is actually on record.

**Receivables, Payables & PDC**

Payments and receipts allocated against named open invoices, and a register for post-dated cheques that posts only on the date they are realised, not the date they were written.

**Fixed Assets & Depreciation**

The asset register with both Straight-Line and Written-Down-Value depreciation tracked side by side, and disposal posting its gain or loss straight to the books.

**Year-End Close & Period Lock**

Profit-and-loss accounts reset and balance-sheet accounts carry forward at year end, and a reviewed period locks against backdated edits until an admin unlocks it — an act that is itself logged.

**Finance Reports**

P&L, balance sheet, and profit by channel, design and SKU — so you know which anarkali actually earned money after commission, shipping and returns.

Know what cash is coming, not just what already arrived

Accounting records what happened; this module is concerned with what happens next — how much cash is actually expected, when, and whether spend against a budget is on track before the month closes and turns the answer into history.

READS FROM Accounting & GST

Sales

Purchase

WRITES TO

Accounting & GST

Cash Flow Forecast

Banking & Reconciliation

Budget vs Actual

Cash Flow Forecast

Expected receipts and expected payments laid out by week, drawn from open invoices and open bills rather than typed in by hand — so a cash shortfall is visible weeks before the date it would actually bite.

Budget vs Actual

A budget set per category and period, and actual spend from Accounting tracked against it as the period runs — not only after it closes, when the only thing left to do is explain the variance.

Banking & Reconciliation

Bank statement lines matched against the ledger's own record of what should have moved, with anything unmatched surfaced instead of silently carried forward.

Get paid what the panels owe you — cycle by cycle

Matching one payout to one order line happens in OMS. This is the level above: the settlement cycle each panel runs, the commission it actually charged against the rate card it published, and the TCS it deducted in your name.

READS FROM E-commerce / OMS

Accounting & GST

WRITES TO

Accounting & GST

Payout Cycles

Fee & Commission Audit

TCS & TDS Register

Payout Cycles

Every settlement cycle each panel runs — what it should pay, what actually landed in the bank, and on which day — so a late payout is visible the day it is late, not at month end.

TCS & TDS Register

Every rupee the panels deducted as TCS, and TDS on job work, matched against the portal's own figures — so the credit you claim is the credit you are owed.

Settlement cycles · what each panel really paid

DUE THIS CYCLE

Flipkart	12-18 Jul	₹14,20,000	₹12,90,000	₹1,30,000
Meesho	12-18 Jul	₹9,80,000	₹9,74,000	₹6,000
Shopify (own)	Daily	₹10,00,000	₹10,00,000	₹0

Commission charged as published

86%

Claims recovered

63%

Fee & Commission Audit

The commission a panel publishes for a category against what it actually took, style by style. A quiet rate change is caught the first time it is applied, not at year end — and your seller tier sits on the same screen, because the tier is what the rate card hangs off, and slipping out of one quietly costs more than any single deduction.

Seven panels, one queue — and every rupee accounted for

Stop logging into Myntra, then Flipkart, then Ajio. Every marketplace order lands in one pipeline and your stock goes out to all of them — then the money side closes out in the same module: what the panel paid, what it kept as commission, what came back, and what it still owes you.

Marketplace OMS

Order Management

Manual Data Check

Reconciliation

Claims & Disputes

Returns / RMA

Channels & Storefronts

Labels & Documents

Listing & Catalog Manager

Size / Fit Recommendation AI

AR / Virtual Try-On

Marketplace OMS

Myntra, Flipkart, Ajio, Amazon, Meesho, Nykaa and JioMart in a single queue — processed all together, channel-wise, or design-wise. The stages the panels really use, with the right cut-off counting down on each order — a quick-commerce or air-shipped order is not due at the same hour as a standard one. Priority orders at the top, and the day grouped by design so a Muskan Purple is picked once for eleven parcels instead of eleven times.

Manual Data Check

The order and return sheets you already download from the panels, and the offline registers from the three shops — one file or a whole ZIP — read back as ten cross-checks: net sale after commission and fees, month, design, state, wrong returns, SPF claims, ads, payouts and GST. Every figure clicks through to the transactions behind it.

Claims & Disputes

Weight disputes, SPF shortfalls, parcels lost in transit and returns that came back with a different piece inside — filed as claims with the packing footage attached, and answered before they close. A claim awaiting your reply is money; one closed for no response is nothing, so the days left sit beside the amount.

Channels & Storefronts

Connect a channel once and it stays in step: catalogue out, price out, stock out, orders in. Seven marketplaces and any website platform — Shopify, WooCommerce, Magento, BigCommerce, Wix or a custom site over its own API — each switchable without touching your data. Shopsy and any other storefront a channel runs alongside its main one counts as its own channel here. Where a channel has no open interface, its own downloaded report is a first-class way in. A channel may also know you by a different trading name — that is a label on the channel, not a second company, so it tags the order and the payout without ever splitting your books.

Listing & Catalog Manager

Bulk-create and bulk-edit listings across every channel from the one product record in Inventory & Catalog, and catch the mismatches that quietly cost sales: listed but out of stock, or in stock but never listed.

AR / Virtual Try-On

A way to see drape, fit and colour on a screen before buying, for items where a flat photo alone leaves too much to guess.

Order Management

One pipeline from new to delivered, whether the order came from a seller panel, your Shopify or WooCommerce site, a dealer or the counter.

Reconciliation

Match every marketplace payout to the order line that earned it, and expose the gap.

Returns / RMA

Customer returns, courier returns and wrong returns kept apart — because only one of the three is really your fault, and only one of them turns into dead stock.

Labels & Documents

The panel gives you a PDF; this hands the packing table something it can work from. Cropped to 4×6 for every channel, your design code printed large where the panel left it off, the invoice and slip merged behind it, and the whole batch to the label printer in one job. Reprint one parcel without redoing the lot — and no customer's name and address is ever uploaded to an outside website to be cropped.

Size / Fit Recommendation AI

A fit suggestion at the point of purchase, built from the item's own measurements and the return history of buyers who picked each size — aimed straight at the return reason that costs the most: the right item in the wrong size.

Pay everyone right, on time

Office staff on a monthly salary and karigars paid by the piece, in one register, with attendance driving both and the festival advance already deducted.

If this happens, do that — across any module, without writing code.

**Blog & Pages**

How to drape it, what to wear it to, which fabric for which season — written, scheduled and published to your own site with the meta and internal links already set.

**Markdown / Clearance Optimization**

The same rule engine that reprices for competitiveness, aimed at ageing stock instead: when to start discounting it and by how much, before it becomes a warehouse write-off rather than a sale at a lower margin.

**Events**

Trade shows and exhibitions worked as a channel of their own — booth, budget and every lead captured on the floor landing straight in CRM instead of on a stack of business cards.

 AI Content Engine MODULE 18 5 APPS

Write it, shoot it, cut it — from your own catalogue

Listings, ads, reels and product photography generated from your own designs, in a voice that sounds like one person from Surat rather than a template — so the words match the piece and the picture is the size Myntra actually wants.

**Content Engine**

Fourteen stages in your own voice — buyer psychology, competitor reading, hooks, the product description, marketplace copy for Amazon and Myntra, ad variations, reel scripts, song lyrics for the reel, the calendar, size chart and alt text.

**Video Studio**

Text and image to video, reels and ad cuts sized for every channel.

**Publisher**

One push sends the listing, images and copy to the website and every panel, and reports back what went live and what a panel rejected, with the reason.

**Image Studio**

A phone photo becomes a listing image: layers, free transform, background removal, Myntra 1080×1440 and every other channel preset, watermark and SEO alt text.

**Design Studio**

Banners, festive creatives and thumbnails — templates, layers, undo and redo, any colour, exact sizing and stock elements, exporting PNG, JPG or PDF at whatever size the panel or the printer asks for.

 SEO, AEO & AIO MODULE 19 3 APPS

Be found by a search box, an answer box and an AI

Content already exists once this module is reached; here it is made findable — by a traditional search engine, by the answer box above the results, and by the AI assistants now answering shopping questions directly instead of sending someone to a results page.

READS FROM

Inventory & Catalog

AI Content Engine

WRITES TO

Marketing

-  Technical SEO & Schema
-  Answer-Engine Optimization
-  AI-Engine Visibility Tracking

 **Technical SEO & Schema**

Structured data, sitemaps and page-level technical checks against your own storefront and content pages, so a search engine can read what a page is actually about instead of guessing from the text alone.

 **AI-Engine Visibility Tracking**

Whether and how this business is actually cited when someone asks an AI assistant a shopping question in this category, tracked over time — the same discipline as rank tracking, aimed at a newer kind of result page.

 **Answer-Engine Optimization**

Content shaped to be quoted directly by an answer box or a voice assistant — a clear, citable answer near the top of the page — rather than written only for a person to scroll through.

 Forum

 Discuss

 Knowledge Base

 **Projects & Cases**

An exhibition, a custom order for a chain, a fit-out or a dispute — stages you define, owners, deadlines, documents, hours and real cost, all on one record the ledger can see.

 **Approvals**

One queue for everything waiting on a yes: a mill purchase order, a boutique discount, a leave day, a credit note, a payment. The rule that sent it there is next to it, and the decision goes on the record.

 **Discuss**

The conversation attached to the record it is about — this order, this mill bill, this dispute — so a year later the reason for the decision is still sitting beside it.

 **Timesheets & Planning**

Who is on what this week and the hours that actually went in — against a project, an exhibition or a machine — with billable and non-billable kept apart.

 **Forum**

Questions and answers that outlive a chat — for customers, dealers or staff — with the useful ones kept where the next person will actually find them.

 **Knowledge Base**

A searchable internal wiki of standard operating procedures, scoped to the role it applies to, so how a task is meant to be done is written down once instead of carried in one person’s head.

 Dashboard & BI

MODULE 21

5 APPS

See the whole house without asking anyone

Every number rolls up here as work happens — the day’s marketplace orders, what the karigars finished, what is still lying at the dyer, what the mills are owed. No exports, no waiting for month-end.

CEO Dashboard

Report Builder

Group Consolidation

Excel Dashboard Builder

ESG / Sustainability Reporting

CEO Dashboard

Cash, sales by channel, stock by design, profit per piece and the alerts that matter — one screen, refreshed as the day runs.

Report Builder

Drag the fields you want into a report and save it for the whole team.

Group Consolidation

Ethnic Fashion, Vastrangam and Adini Couture as one set of figures, inter-company transfers removed, so the group position is real rather than three spreadsheets added together. Adini Couture has no registration of its own and mainly does job work — it still counts in the group, without being pulled into a return it does not belong in. Add the fourth company the day you open it.

Excel Dashboard Builder

A full workbook — financial summary, HR, purchase, sales, inventory and production, GST, expenses — generated from the live records behind every other screen, with each company shown as its own row and a consolidated row that is a formula over them, never a separately typed total.

ESG / Sustainability Reporting

Water usage, chemical compliance, waste and packaging, reported from the same certificate and audit records Quality & Compliance already keeps — so a sustainability report is a query over evidence already on file, not a separate exercise assembled once a year from scratch.

BUILT DEEP, NOT WIDE

The controls that pay for the software

Three-way match

A supplier bill only passes when the purchase order, the goods receipt and the invoice agree on price and quantity. Bills that over-charge or over-bill rejected goods are held automatically, with the reason in plain language.

Vendor risk that sees ahead

Risk blends weak performance, spend concentration and overdue bills. Your *best* supplier still flags medium risk when 44% of your buying sits with them — the fact worth knowing before a disruption, not after.

Settlement reconciliation

Import a marketplace settlement, match it to the orders, and see every commission, TCS deduction, weight discrepancy and short payment — with a claim pack ready to file.

Karigar piece-rate

Pooled set completion, per-garment rates, alteration hours and advances roll into each karigar's payout — and into a true cost per piece for every design.

One stock number

One quantity per SKU per location per stage, pushed to every channel. Overselling stops being a monthly apology.

AI studio built in

Listings, ad copy, product photography and reels generated against your own catalogue — not a bolted-on chatbot, but the same data core.

Built on the neutral engine, dressed for this trade

Every screen you are about to read is the same code as the Medhava edition. Only the master data and the words change — which is exactly why a machine shop or a law firm can run it too.

What is different here

Fabric in metres and pieces in numbers on the same item master. Karigar piece-rate with pooled set completion. Design-wise costing to the paise. HSN 5007 / 5208. Wrong-return dead stock treated as the loss it is.

The channels you actually sell on

Myntra, Flipkart, Ajo, Amazon, Meesho, Nykaa and JioMart in one queue, plus the Surat counter, the boutique wholesale book and export to the Gulf — all writing to the same order table.

The people who make it

Cutting, stitching, embroidery, finishing and checking as stages you set. Karigars paid by the piece, staff paid by the month, both in one register and one payout.

The compliance you file

GST on ethnic wear slabs, TCS the marketplaces deduct, TDS on job work, LUT bond and IGST refund on export — all worked out from the same vouchers.

COMPARISON

Medhava vs. a suite of integrated apps

The difference is architectural, not cosmetic.

CAPABILITY	MEDHAVA	TYPICAL SUITE
Architecture	One app, one data core	Many apps, integrated
Master data	Single Item & Party record	Duplicated per app, synced
Stock truth	One number per SKU × location	Per-app, reconciled nightly
Cross-module posting	Instant, via event bus	Scheduled sync jobs
Marketplace settlement	Reconciled to order line + claim pack	Usually a separate tool
Piece-rate manufacturing	Built in	Custom development
AI content & imaging	Native, on your catalogue	Third-party add-on
Offline capability	Single-file apps run offline	Cloud-only

Your credentials are never the key

Scoped keys only

Marketplace, bank and courier connections use revocable, scoped API keys held in an AES-256-GCM vault. Medhava never asks for, uses or stores an account password.

Isolation by row

Every record carries a company id and is enforced by PostgreSQL row-level security. Group companies stay separate but consolidate on demand.

Immutable audit

Every posting, price change and permission grant is written to an append-only trail with actor, timestamp and before/after values.

THE GAP

Three categories of software. Nobody sells all three.

You are not short of tools. You are short of one tool that covers all of it — which is why the numbers never agree.

Accounting & ERP suites

Tally · BUSY · Marg · Zoho · Odoo

- ✓ Books, GST, stock, purchase
- ✓ Manufacturing, payroll
- ✗ No marketplace order queue
- ✗ No settlement reconciliation or claims
- ✗ No content, image or video studio

Marketplace OMS platforms

Unicommerce · EliteSecom · SmartHub

- ✓ Panel orders in one queue
- ✓ Inventory sync, settlement
- ✗ No double-entry books, no GST return
- ✗ No manufacturing, purchase or payroll
- ✗ No content, image or video studio

AI content tools

Writing · image · video generators

- ✓ Copy, pictures, reels
- ✗ Knows nothing about your catalogue
- ✗ No orders, no stock, no books
- ✗ Nothing publishes to a channel
- ✗ Nothing reconciles afterwards

Medhava

All three, over one data core

- ✓ Books, GST, stock, purchase, manufacturing, payroll
- ✓ Marketplace and storefront order queue
- ✓ Settlement, claims, returns, packing footage
- ✓ Content, image, design and video studio
- ✓ One record underneath all of it

In an accounting package you will never get a marketplace OMS. In an OMS you will never get your books. In a content tool you will never get either. That is the gap. Medhava is built in it.

THE APPROACH

Built deep, not wide

A long feature list is easy. What is hard is the one control that stops the money leaking — so every module ships with one, and refuses rather than warns.

01

Accepted, not ordered

You order 100. 100 arrive. Quality accepts 96. Most systems raise stock by 100 and claim tax credit on 100. Medhava raises stock by 96, claims credit on 96, raises a debit note for the 4, and lowers that supplier's accept rate. Automatically.

02

The payout, to the order line

Not "the channel paid ₹49.1 lakh". Which order line was short, by how much, against which published commission rate — with the claim pack already assembled and the packing footage attached.

03

Nothing derived is stored

Outstanding, ageing, promise dates, payouts, on-time percentage and risk are recomputed every time you read them. A stored number goes stale the moment the document under it changes. These cannot.

PRICING

Start free. Pay when it runs your business.

The software puts no ceiling on how many companies you run — your plan does, and you move up when you need to. Two of the 20 modules — E-commerce / OMS and the AI Content Engine — are priced on what you actually use, because an order is work and a piece of content is work.

E-commerce / OMS & AI Content Engine

These two are metered, the way every serious order-management platform prices. You pay for orders that actually shipped and content that was actually produced — not for a seat that sat idle.

E-commerce / OMS

AI Content Engine

PER ORDER PROCESSED

ORDERS A MONTH	PER ORDER	INCLUDED
Up to 1,000	₹2.50	All channels, settlement, returns
1,001 – 10,000	₹1.80	+ claims desk, packing footage
10,001 – 50,000	₹1.40	+ multi-warehouse routing
Above 50,000	On request	+ dedicated throughput

An order is counted once, when it is dispatched. A cancelled or unshipped order is never billed.

PER PIECE PRODUCED

WHAT IS PRODUCED	COUNTS AS	RATE
Channel listing (title, bullets, description)	1 content	₹6
Social post, caption or ad variation	1 content	₹4
Product image · background, resize, preset	1 content	₹3
Reel or video cut, per finished clip	1 content	₹25

Bring your own model key and the rate drops to the platform fee alone — no lock-in, ever.

REQUEST A DEMO

Bring one month of your own data

Sales, purchases and stock for a single month. In forty minutes you will see what your current tools are hiding — the short payouts, the returns nobody costed, the stock that two systems disagree about.

QUESTIONS

Frequently asked

What is Medhava?

Medhava is a unified ERP made of 20 modules and 98 apps that all read and write one shared data core — Item/SKU, Party, Stock, Ledger and Order. Because the data is shared, a single action such as a goods receipt updates stock, the ledger, quality records and the vendor scorecard at the same time.

How is Medhava different from Zoho or Odoo?

Does Medhava support Indian GST?

Which marketplaces does Medhava connect to?

Can Medhava be used outside textiles?

Is my data safe?

Can I use it without internet?

How long does implementation take?

Stop reconciling. Start running.

See your own numbers inside Medhava. Bring one month of sales, purchases and stock — we will show you what your current tools are hiding.

Run the whole ethnic wear house on one system

Mill to marketplace in one application. The metre you bought, the karigar who stitched it, the design that sold on Myntra, the return that came back damaged and the GST on all of it — one record, one stock number, one set of books. Nothing re-keyed between them.

Start free for 30 days

Book a demo

- ✓ Free for 30 days

20

Modules, one login

98

Apps over one data core

1

Stock number for every SKU

7

Marketplaces connected

WHAT MEDHAVA IS

One application. Not eleven that talk to each other.

Every other suite sells you separate products and a sync job between them. Medhava is a single application over one set of records — so there is nothing to synchronise, and nothing to reconcile.

1

Enter it once

A goods receipt, a counter sale, a marketplace order — recorded in one place. Stock, the ledger, the quality record and the supplier scorecard all update in the same instant, because they are reading the same record.

2

Numbers that cannot disagree

One stock figure per SKU. One ledger. One order record. Not a copy per channel that somebody reconciles on Saturday. When the website says four are left, four are left.

3

Built for how India actually runs

GST with input credit on accepted goods, TDS and TCS, seven marketplaces, piece-rate karigar wages — and apps that keep working when the internet does not.

WHAT CHANGES FOR YOU

The same day, before and after

Nothing here is a new way to run your business. It is the work you already do, arranged so that it only has to be done once.

TODAY

- ✗ Log into seven seller panels, one at a time
- ✗ Copy each order into a sheet, then into the books
- ✗ Guess which stock figure is the real one
- ✗ Learn at month-end that a mill over-billed you
- ✗ Chase a marketplace shortfall you spotted six weeks late
- ✗ Ask three people for their file before you can see one number

WITH MEDHAVA

- ✓ One queue, sorted by whichever order is closest to being late
- ✓ The order writes itself into stock and into the ledger
- ✓ There is one stock figure, so there is nothing to choose between
- ✓ An over-billed invoice cannot be paid — the match refuses it
- ✓ Every shortfall is on a screen the day the payout lands
- ✓ Open the dashboard. It was already up to date.

Medhava at a glance

What it is	A unified ERP: 20 modules and 98 apps sharing one data core and one event bus.
Shared data core	Item/SKU · Party · Stock · Ledger & Voucher · Order — every module reads and writes these.
Key difference	Not a suite of integrated apps. One application, so there is no sync step and no duplicate master data.
Compliance	Double-entry accounting with CGST/SGST/IGST, TDS, TCS, ITC on accepted goods, GSTR-1 and GSTR-3B.
Channels	Amazon, Flipkart, Myntra, Meesho, Ajio, Nykaa, JioMart, plus Shopify and WooCommerce.
Security	PostgreSQL row-level security per company; integrations use revocable scoped API keys in an AES-256-GCM vault — never account passwords.
Deployment	Hosted multi-tenant cloud, or single-file offline apps that run by double-clicking with no install.

Your business runs on eleven tools that don't talk

Accounting in one place, stock in a spreadsheet, marketplace orders in seven seller panels, karigar wages in a notebook. Every month-end becomes an archaeology project.

Numbers that disagree

Stock says 40, the marketplace says 12, the books say something else again. Nobody knows which is right, so everyone guesses.

Work entered three times

The same invoice keyed into the seller panel, the spreadsheet and the accounting package. Three chances to be wrong.

Money quietly leaking

Over-billed purchases, unclaimed marketplace shortfalls, RTO losses — invisible until the year is over.

HOW IT WORKS

One data core. One action cascades everywhere.

Every module reads and writes the same five entities. That is the physical reason a single goods receipt can touch stock, books, quality and sourcing at the same instant.

UNIFIED DATA CORE

Item / SKU

Party

Stock

Ledger

Order

→ Inventory · stock in

→ Finance · payable & ITC

→ Quality · debit note

→ Sourcing · risk updated

← Planning · requirements

← Marketplace · order pull

Accepted — not ordered — is what counts

You order 100 metres. 100 arrive. Quality accepts 96. Most systems increase stock by 100 and claim tax credit on 100. Medhava increases stock by **96**, claims input tax credit on **96**, raises a debit note for the 4 rejected, and lowers that mill's accept rate — automatically.

Nothing derived is ever stored

Outstanding, risk, performance, ageing, profit per product — all recomputed on read. They cannot drift out of step with the documents underneath them.

20 modules. 98 apps. One login.

Each module is a complete area of your business. Turn on what you need today — everything else is already wired for the day you need it.

 Identity, Settings & Audit

 Ask & Print

 Communications

 Data Privacy & Consent

 Payment Data Scope

 Identity, Settings & Audit

Users, roles and permissions, company switching, tax and numbering setup — and an immutable record of everything that ever happened.

 Ask & Print

At an exhibition in Hyderabad, send one line from your phone: “ledger Kalamandir”, “print slips”. It comes back as a PDF, or it prints at the Surat office — with nothing plugged into your phone and nothing at the office open to the internet.

 Communications

WhatsApp commands and broadcasts, email and SMS, and the handful of scheduled jobs that carry a nudge to the right person without anyone remembering to send it. Every capability here has more than one interchangeable provider — none of them is ever the source of a figure the business reports.

 Data Privacy & Consent

What a person's data may be used for, captured as consent at the point it is given and honoured everywhere downstream — including the right to have it corrected or removed. Retention (how long a record is kept) and deletion (a person's right to have their own data removed) are two different policies, tracked separately, because a rule that keeps records for the law and a request from a person to be forgotten do not resolve the same way.

 Payment Data Scope

A written statement of exactly which systems ever see a card or bank credential, and which never do — because every card-capable screen in this system hands that moment to a payment provider's own secured field and never stores or even passes the number through application code. The statement is what an auditor or a partner asks for before they will connect to this system.

A style exists on paper before it exists as stock

A product moves from a first idea to something the business can actually make and sell — specification, sample rounds, costed trials and sign-off — before it is ever entered as a catalog record. Building this first means Inventory & Catalog never has to invent a style it has no real specification for.

PLM & Development

Concept to a design that can actually be made: fabric and trim specification, sample rounds with the mill, costed trials against a target price, and sign-off — every version kept, so last season’s costing is still there.

📄

Design / IP Register

What protects a design once it exists — trademark or copyright status, the date it was first shown, and a flag the moment a near-identical listing turns up elsewhere. Every version already kept by PLM & Development gets a filed status here instead of just a date stamp, because a design with no ownership record on file is a design nobody can defend.

One stock number everyone trusts

The most important number in the house: one quantity per design and size, per godown, per stage — greige, dyed, in stitching, finished, listed. Read and written by every other module. And one product record every marketplace lists from.

● ● ● Design record · one design, every panel's name for it

- ✓ Master-Data Hygiene

📦

Stock

Live quantity by design, size and location, fabric in metres and pieces in numbers, with reorder alerts, lot tracking, set kits and dead-stock ageing.

📄

Catalog / PIM

One record per design — fabric, work, length, colour, size chart, images, HSN, MRP and what each panel actually sells it at — scored for Myntra and Amazon readiness before it lists. It also carries the two things everything downstream needs: the code each panel knows the design by, mapped to yours, and the packed size and weight that decide the courier rate and settle every weight dispute. Every listing’s state on every panel is here too — live, waiting for approval, blocked, archived — with the quality score that decides whether anyone sees it.

📦

Kit & Combo SKU

A sellable SKU made of component SKUs — a three-piece set sold as one listing. Selling the kit decrements each component at order time, so stock is right for every piece in the set, not just the set itself.

✓

Master-Data Hygiene

Duplicate detection and merge across customers, vendors and designs, and a dead-stock register for what has not moved in months. Protects every downstream report from the same record existing twice under two names.

Know every boutique, chain and customer completely

One record per party — a Kalamandir or a Rajmandir, a Surat walk-in or a Myntra buyer — carrying every enquiry, order, return, agreement and conversation, whichever channel it arrived on.

CRM & Customer 360

Enquiry to confirmed order, then the full lifetime: what they bought, what came back, what they are worth and which new range to show them first.

Helpdesk & Live Chat

A boutique asking where its parcel is, or a customer asking about a size — the question becomes a ticket tied to the order, with the whole history already open.

Documents & eSign

Mill agreements, job-work contracts, signed delivery challans, export documents and boutique credit terms filed against the party or order they belong to — found by that record, not by hunting through a folder.

Forms & Feedback (NPS)

A short form after delivery, and the score it produces attached to the design or item it is actually about — not just the buyer — so a complaint-prone item surfaces as a pattern instead of a scatter of individual gripes.

Sales

MODULE 05

7 APPS

Counter, wholesale, website and export — one order book

The Surat counter, the boutique wholesale book, the website and the export shipment all write to the same order and draw on the same stock number. And the parcel is followed to the door, because a sale is not done until the COD money is in.

D2C Sales
Orders from your own storefront, cart to dispatch, with loyalty and partial COD on a ₹4,400 anarkali.

Export
Commercial invoice, packing list, LUT bond and IGST-refund tracking for the Gulf and UK buyers.

Quotes & Proforma
Send a quote, convert it to a confirmed order in one click.

Subscriptions
A schedule that raises its own invoice on its cycle and follows up on its own when a payment fails — for anything sold as a standing order rather than a one-off.

B2B & Credit
Boutique and chain orders on credit limits and tier pricing, with outstanding aged against each party's own agreed terms.

POS
Counter billing at Udhna that draws on the same stock as the website — no second stock register.

Couriers & AWB
Book the parcel on the order, compare couriers for that pin code, print the label with the design code on it, and follow the AWB to the door.

Planning & Requirements (MRP)

MODULE 06

3 APPS

Turn what is selling into what to buy and make

Confirmed orders and demand history have to become a plan before Purchase can buy anything or Manufacturing can start anything — otherwise buying and making are both just guessing. This module sits between the two: it reads what is actually selling and what is already committed, and turns that into requirement, not the other way around.

READS FROM

Sales

E-commerce / OMS

Inventory & Catalog

WRITES TO

Purchase

Manufacturing

- Demand Forecast & Signal
- Requirement Explosion (MRP run)
- Open-to-Buy / Budget Ceiling

Demand Forecast & Signal
What sold, by SKU and by period, turned into a short-term forecast — the number every requisition and every production order downstream is measured against instead of a guess.

Open-to-Buy / Budget Ceiling
A spending ceiling set per period regardless of what the demand signal suggests, so a real signal cannot on its own commit more money than the business has decided to risk this season. Every requisition the MRP run drafts is checked against what is left of the ceiling before it goes to Purchase.

Requirement Explosion (MRP run)
Confirmed demand exploded through the bill of materials into what raw material to buy and what to produce, and by when — so a purchase requisition or a production order always traces back to real demand, never to a feeling that stock is getting low.

Purchase

MODULE 07

Production Orders

Piece-rate & Contractors

BOM & Consumption

Maintenance

Production Orders

Cutting, stitching, embroidery, washing, finishing and checking — your own stages, with work-in-progress visible at each and nothing lost at the dyer.

Piece-rate & Contractors

Karigars paid by the piece: pooled set completion, per-garment rates, alterations, rework and advances resolved into one payout.

BOM & Consumption

What each design consumes — metres of fabric, zari, lining, buttons, packing — costed at today's mill rates.

Maintenance

Machines and the building: what is due for service, when it was last done, what it cost, and what stopped while it was down.

Quality & Compliance

MODULE 09

2 APPS

Certify what was received and what was made

Quality inspection used to live buried as one step inside Manufacturing; it stands on its own here because a rejection at goods-receipt and a rejection on the production floor are the same discipline, and because the certificates a business holds — the proof it follows a standard — belong next to the inspections that back them up, not scattered across email.

READS FROM

Purchase

WRITES TO

Purchase

Manufacturing

Inventory & Catalog

✓

Quality Control

Accept, reject or send for rework, with reasons that feed the mill's accept rate and the karigar's record.

📄

Certificate & Compliance Register

Every standard the business or a vendor holds — a safety, labour or environmental certification — with its issue date, its expiry, and the audit that backs it, so a certificate about to lapse is visible before a buyer asks for it and finds it already expired. What this register tracks is what a sustainability report downstream is actually built from.

Parcels traced after handover

100%

Rates & Zones
Every courier's rate card by zone, weight slab and service — so the cheapest and the fastest option for this parcel are both known before it is booked.

COD Remittance
What the courier collected at the door against what reached the Surat account, parcel by parcel, with every shortfall named and aged.

Fleet
Your own delivery vehicles, if you run any — what each trip cost, what is due for service, and what that adds to freight. Optional; most businesses run couriers only.

NDR & RTO Rescue
A failed delivery worked while it can still be saved — reattempt, call, correct the address — before it becomes a return you pay for twice.

Handover & Manifest
What is expected out today against what the pickup boy actually took, per courier and per service. The manifest to hand him, the one-time code to confirm it, and a signed note of what was left behind — so a parcel lost between the packing table and the van has an owner.

Accounting & GST

MODULE 12

Finance Reports

Accounting
Double-entry books where every voucher balances and the trial balance always ties.

Invoicing
GST tax invoices and receipts, worked out from the lines to the paise. Where a panel raises its own invoice you keep both numbers on the order — theirs and your own series — so the panel's paperwork and your books point at the same sale.

Expenses
Spend captured by category with approvals, and bill OCR to save typing.

GST & Tax
CGST, SGST, IGST, TDS, TCS, input credit, GSTR-1 and GSTR-3B — filed per registration, so a group where one company is registered and another is not files exactly what each one owes and nothing it does not.

ITC Reconciliation
Every input credit matched against the government's own GSTR-2A/2B before a return is filed, so a credit claimed is a credit that is actually on record.

Receivables, Payables & PDC
Payments and receipts allocated against named open invoices, and a register for post-dated cheques that posts only on the date they are realised, not the date they were written.

Fixed Assets & Depreciation
The asset register with both Straight-Line and Written-Down-Value depreciation tracked side by side, and disposal posting its gain or loss straight to the books.

Year-End Close & Period Lock
Profit-and-loss accounts reset and balance-sheet accounts carry forward at year end, and a reviewed period locks against backdated edits until an admin unlocks it — an act that is itself logged.

Finance Reports
P&L, balance sheet, and profit by channel, design and SKU — so you know which anarkali actually earned money after commission, shipping and returns.

Know what cash is coming, not just what already arrived

Accounting records what happened; this module is concerned with what happens next — how much cash is actually expected, when, and whether spend against a budget is on track before the month closes and turns the answer into history.

READS FROM

Accounting & GST

Sales

Purchase

WRITES TO

Accounting & GST

- Cash Flow Forecast
- Banking & Reconciliation
- Budget vs Actual

Cash Flow Forecast

Expected receipts and expected payments laid out by week, drawn from open invoices and open bills rather than typed in by hand — so a cash shortfall is visible weeks before the date it would actually bite.

Budget vs Actual

A budget set per category and period, and actual spend from Accounting tracked against it as the period runs — not only after it closes, when the only thing left to do is explain the variance.

Banking & Reconciliation

Bank statement lines matched against the ledger’s own record of what should have moved, with anything unmatched surfaced instead of silently carried forward.

Get paid what the panels owe you — cycle by cycle

Matching one payout to one order line happens in OMS. This is the level above: the settlement cycle each panel runs, the commission it actually charged against the rate card it published, and the TCS it deducted in your name.

READS FROM

E-commerce / OMS

Accounting & GST

WRITES TO

Accounting & GST

- Payout Cycles
- Fee & Commission Audit
- TCS & TDS Register

Payout Cycles

Every settlement cycle each panel runs — what it should pay, what actually landed in the bank, and on which day — so a late payout is visible the day it is late, not at month end.

TCS & TDS Register

Every rupee the panels deducted as TCS, and TDS on job work, matched against the portal’s own figures — so the credit you claim is the credit you are owed.

●●● Settlement cycles - what each panel really paid

Shopify (own)	Daily	₹10,00,000	₹10,00,000	₹0

Commission charged as published

86%

Claims recovered

63%

Fee & Commission Audit

The commission a panel publishes for a category against what it actually took, style by style. A quiet rate change is caught the first time it is applied, not at year end — and your seller tier sits on the same screen, because the tier is what the rate card hangs off, and slipping out of one quietly costs more than any single deduction.

Seven panels, one queue — and every rupee accounted for

Stop logging into Myntra, then Flipkart, then Ajio. Every marketplace order lands in one pipeline and your stock goes out to all of them — then the money side closes out in the same module: what the panel paid, what it kept as commission, what came back, and what it still owes you.

- Marketplace OMS

Order Management

Manual Data Check

Reconciliation

Claims & Disputes

Returns / RMA

Channels & Storefronts

Labels & Documents

Listing & Catalog Manager

Size / Fit Recommendation AI

AR / Virtual Try-On

Marketplace OMS

Myntra, Flipkart, Ajio, Amazon, Meesho, Nykaa and JioMart in a single queue — processed all together, channel-wise, or design-wise. The stages the panels really use, with the right cut-off counting down on each order — a quick-commerce or air-shipped order is not due at the same hour as a standard one. Priority orders at the top, and the day grouped by design so a Muskan Purple is picked once for eleven parcels instead of eleven times.

Manual Data Check

The order and return sheets you already download from the panels, and the offline registers from the three shops — one file or a whole ZIP — read back as ten cross-checks: net sale after commission and fees, month, design, state, wrong returns, SPF claims, ads, payouts and GST. Every figure clicks through to the transactions behind it.

Claims & Disputes

Weight disputes, SPF shortfalls, parcels lost in transit and returns that came back with a different piece inside — filed as claims with the packing footage attached, and answered before they close. A claim awaiting your reply is money; one closed for no response is nothing, so the days left sit beside the amount.

Channels & Storefronts

Connect a channel once and it stays in step: catalogue out, price out, stock out, orders in. Seven marketplaces and any website platform — Shopify, WooCommerce, Magento, BigCommerce, Wix or a custom site over its own API — each switchable without touching your data. Shopsy and any other storefront a channel runs alongside its main one counts as its own channel here. Where a channel has no open interface, its own downloaded report is a first-class way in. A channel may also know you by a different trading name — that is a label on the channel, not a second company, so it tags the order and the payout without ever splitting your books.

Listing & Catalog Manager

Bulk-create and bulk-edit listings across every channel from the one product record in Inventory & Catalog, and catch the mismatches that quietly cost sales: listed but out of stock, or in stock but never listed.

AR / Virtual Try-On

A way to see drape, fit and colour on a screen before buying, for items where a flat photo alone leaves too much to guess.

100%

Order Management

One pipeline from new to delivered, whether the order came from a seller panel, your Shopify or WooCommerce site, a dealer or the counter.

Reconciliation

Match every marketplace payout to the order line that earned it, and expose the gap.

Returns / RMA

Customer returns, courier returns and wrong returns kept apart — because only one of the three is really your fault, and only one of them turns into dead stock.

Labels & Documents

The panel gives you a PDF; this hands the packing table something it can work from. Cropped to 4×6 for every channel, your design code printed large where the panel left it off, the invoice and slip merged behind it, and the whole batch to the label printer in one job. Reprint one parcel without redoing the lot — and no customer’s name and address is ever uploaded to an outside website to be cropped.

Size / Fit Recommendation AI

A fit suggestion at the point of purchase, built from the item’s own measurements and the return history of buyers who picked each size — aimed straight at the return reason that costs the most: the right item in the wrong size.

Pay everyone right, on time

Office staff on a monthly salary and karigars paid by the piece, in one register, with attendance driving both and the festival advance already deducted.

 Content Engine

Fourteen stages in your own voice — buyer psychology, competitor reading, hooks, the product description, marketplace copy for Amazon and Myntra, ad variations, reel scripts, song lyrics for the reel, the calendar, size chart and alt text.

 Video Studio

Text and image to video, reels and ad cuts sized for every channel.

 Publisher

One push sends the listing, images and copy to the website and every panel, and reports back what went live and what a panel rejected, with the reason.

 Image Studio

A phone photo becomes a listing image: layers, free transform, background removal, Myntra 1080×1440 and every other channel preset, watermark and SEO alt text.

 Design Studio

Banners, festive creatives and thumbnails — templates, layers, undo and redo, any colour, exact sizing and stock elements, exporting PNG, JPG or PDF at whatever size the panel or the printer asks for.

 SEO, AEO & AIO

MODULE 19

3 APPS

Be found by a search box, an answer box and an AI

Content already exists once this module is reached; here it is made findable — by a traditional search engine, by the answer box above the results, and by the AI assistants now answering shopping questions directly instead of sending someone to a results page.

Inventory & Catalog

AI Content Engine

WRITES TO

Marketing

-  Technical SEO & Schema
-  Answer-Engine Optimization
-  AI-Engine Visibility Tracking

Technical SEO & Schema

Structured data, sitemaps and page-level technical checks against your own storefront and content pages, so a search engine can read what a page is actually about instead of guessing from the text alone.

AI-Engine Visibility Tracking

Whether and how this business is actually cited when someone asks an AI assistant a shopping question in this category, tracked over time — the same discipline as rank tracking, aimed at a newer kind of result page.

Answer-Engine Optimization

Content shaped to be quoted directly by an answer box or a voice assistant — a clear, citable answer near the top of the page — rather than written only for a person to scroll through.

Projects & Collaboration

MODULE 20

6 APPS

The work that is not an order — and the talking around it

An exhibition in Hyderabad, a boutique’s custom order, a new godown fit-out, a legal matter with a supplier. Work that is not a sales order still has a deadline, a cost and documents — and it belongs on the same records as everything else.

Knowledge Base

Projects & Cases

An exhibition, a custom order for a chain, a fit-out or a dispute — stages you define, owners, deadlines, documents, hours and real cost, all on one record the ledger can see.

Approvals

One queue for everything waiting on a yes: a mill purchase order, a boutique discount, a leave day, a credit note, a payment. The rule that sent it there is next to it, and the decision goes on the record.

Discuss

The conversation attached to the record it is about — this order, this mill bill, this dispute — so a year later the reason for the decision is still sitting beside it.

Timesheets & Planning

Who is on what this week and the hours that actually went in — against a project, an exhibition or a machine — with billable and non-billable kept apart.

Forum

Questions and answers that outlive a chat — for customers, dealers or staff — with the useful ones kept where the next person will actually find them.

Knowledge Base

A searchable internal wiki of standard operating procedures, scoped to the role it applies to, so how a task is meant to be done is written down once instead of carried in one person’s head.

Dashboard & BI

MODULE 21

5 APPS

See the whole house without asking anyone

Every number rolls up here as work happens — the day’s marketplace orders, what the karigars finished, what is still lying at the dyer, what the mills are owed. No exports, no waiting for month-end.

CEO Dashboard

Report Builder

Group Consolidation

Excel Dashboard Builder

ESG / Sustainability Reporting

CEO Dashboard

Cash, sales by channel, stock by design, profit per piece and the alerts that matter — one screen, refreshed as the day runs.

Report Builder

Drag the fields you want into a report and save it for the whole team.

Group Consolidation

Ethnic Fashion, Vastrangam and Adini Couture as one set of figures, inter-company transfers removed, so the group position is real rather than three spreadsheets added together. Adini Couture has no registration of its own and mainly does job work — it still counts in the group, without being pulled into a return it does not belong in. Add the fourth company the day you open it.

Excel Dashboard Builder

A full workbook — financial summary, HR, purchase, sales, inventory and production, GST, expenses — generated from the live records behind every other screen, with each company shown as its own row and a consolidated row that is a formula over them, never a separately typed total.

ESG / Sustainability Reporting

Water usage, chemical compliance, waste and packaging, reported from the same certificate and audit records Quality & Compliance already keeps — so a sustainability report is a query over evidence already on file, not a separate exercise assembled once a year from scratch.

BUILT DEEP, NOT WIDE

The controls that pay for the software

Three-way match

A supplier bill only passes when the purchase order, the goods receipt and the invoice agree on price and quantity. Bills that over-charge or over-bill rejected goods are held automatically, with the reason in plain language.

Vendor risk that sees ahead

Risk blends weak performance, spend concentration and overdue bills. Your *best* supplier still flags medium risk when 44% of your buying sits with them — the fact worth knowing before a disruption, not after.

Settlement reconciliation

Import a marketplace settlement, match it to the orders, and see every commission, TCS deduction, weight discrepancy and short payment — with a claim pack ready to file.

Karigar piece-rate

Pooled set completion, per-garment rates, alteration hours and advances roll into each karigar's payout — and into a true cost per piece for every design.

One stock number

One quantity per SKU per location per stage, pushed to every channel. Overselling stops being a monthly apology.

AI studio built in

Listings, ad copy, product photography and reels generated against your own catalogue — not a bolted-on chatbot, but the same data core.

Built on the neutral engine, dressed for this trade

Every screen you are about to read is the same code as the Medhava edition. Only the master data and the words change — which is exactly why a machine shop or a law firm can run it too.

What is different here

Fabric in metres and pieces in numbers on the same item master. Karigar piece-rate with pooled set completion. Design-wise costing to the paise. HSN 5007 / 5208. Wrong-return dead stock treated as the loss it is.

The channels you actually sell on

Myntra, Flipkart, Ajio, Amazon, Meesho, Nykaa and JioMart in one queue, plus the Surat counter, the boutique wholesale book and export to the Gulf — all writing to the same order table.

The people who make it

Cutting, stitching, embroidery, finishing and checking as stages you set. Karigars paid by the piece, staff paid by the month, both in one register and one payout.

The compliance you file

GST on ethnic wear slabs, TCS the marketplaces deduct, TDS on job work, LUT bond and IGST refund on export — all worked out from the same vouchers.

COMPARISON

Medhava vs. a suite of integrated apps

The difference is architectural, not cosmetic.

CAPABILITY	MEDHAVA	TYPICAL SUITE
Architecture	One app, one data core	Many apps, integrated
Master data	Single Item & Party record	Duplicated per app, synced
Stock truth	One number per SKU × location	Per-app, reconciled nightly
Cross-module posting	Instant, via event bus	Scheduled sync jobs
Marketplace settlement	Reconciled to order line + claim pack	Usually a separate tool
Piece-rate manufacturing	Built in	Custom development
AI content & imaging	Native, on your catalogue	Third-party add-on
Offline capability	Single-file apps run offline	Cloud-only

TRUST & SECURITY

Your credentials are never the key

Scoped keys only

Marketplace, bank and courier connections use revocable, scoped API keys held in an AES-256-GCM vault. Medhava never asks for, uses or stores an account password.

Isolation by row

Every record carries a company id and is enforced by PostgreSQL row-level security. Group companies stay separate but consolidate on demand.

Immutable audit

Every posting, price change and permission grant is written to an append-only trail with actor, timestamp and before/after values.

THE GAP

Three categories of software. Nobody sells all three.

You are not short of tools. You are short of one tool that covers all of it — which is why the numbers never agree.

Accounting & ERP suites

Tally · BUSY · Marg · Zoho · Odoo

- ✓ Books, GST, stock, purchase
- ✓ Manufacturing, payroll
- ✗ No marketplace order queue
- ✗ No settlement reconciliation or claims
- ✗ No content, image or video studio

Marketplace OMS platforms

Unicommerce · EliteSecom · SmartHub

- ✓ Panel orders in one queue
- ✓ Inventory sync, settlement
- ✗ No double-entry books, no GST return
- ✗ No manufacturing, purchase or payroll
- ✗ No content, image or video studio

AI content tools

Writing · image · video generators

- ✓ Copy, pictures, reels
- ✗ Knows nothing about your catalogue
- ✗ No orders, no stock, no books
- ✗ Nothing publishes to a channel
- ✗ Nothing reconciles afterwards

Medhava

All three, over one data core

- ✓ Books, GST, stock, purchase, manufacturing, payroll
- ✓ Marketplace and storefront order queue
- ✓ Settlement, claims, returns, packing footage
- ✓ Content, image, design and video studio
- ✓ One record underneath all of it

In an accounting package you will never get a marketplace OMS. In an OMS you will never get your books. In a content tool you will never get either. That is the gap. Medhava is built in it.

THE APPROACH

Built deep, not wide

A long feature list is easy. What is hard is the one control that stops the money leaking — so every module ships with one, and refuses rather than warns.

01

Accepted, not ordered

You order 100. 100 arrive. Quality accepts 96. Most systems raise stock by 100 and claim tax credit on 100. Medhava raises stock by 96, claims credit on 96, raises a debit note for the 4, and lowers that supplier's accept rate. Automatically.

02

The payout, to the order line

Not "the channel paid ₹49.1 lakh". Which order line was short, by how much, against which published commission rate — with the claim pack already assembled and the packing footage attached.

03

Nothing derived is stored

Outstanding, ageing, promise dates, payouts, on-time percentage and risk are recomputed every time you read them. A stored number goes stale the moment the document under it changes. These cannot.

PRICING

Start free. Pay when it runs your business.

The software puts no ceiling on how many companies you run — your plan does, and you move up when you need to. Two of the 20 modules — E-commerce / OMS and the AI Content Engine — are priced on what you actually use, because an order is work and a piece of content is work.

[Talk to sales](#)

E-commerce / OMS & AI Content Engine

These two are metered, the way every serious order-management platform prices. You pay for orders that actually shipped and content that was actually produced — not for a seat that sat idle.

E-commerce / OMS

AI Content Engine

PER ORDER PROCESSED

ORDERS A MONTH	PER ORDER	INCLUDED
Up to 1,000	₹2.50	All channels, settlement, returns
1,001 – 10,000	₹1.80	+ claims desk, packing footage
10,001 – 50,000	₹1.40	+ multi-warehouse routing
Above 50,000	On request	+ dedicated throughput
An order is counted once, when it is dispatched. A cancelled or unshipped order is never billed.		

PER PIECE PRODUCED

WHAT IS PRODUCED	COUNTS AS	RATE
Channel listing (title, bullets, description)	1 content	₹6
Social post, caption or ad variation	1 content	₹4
Product image · background, resize, preset	1 content	₹3
Reel or video cut, per finished clip	1 content	₹25
Bring your own model key and the rate drops to the platform fee alone — no lock-in, ever.		

REQUEST A DEMO

Bring one month of your own data

Sales, purchases and stock for a single month. In forty minutes you will see what your current tools are hiding — the short payouts, the returns nobody costed, the stock that two systems disagree about.

- ✓ No obligation and no card details
- ✓ Your data stays yours — we work on a copy and delete it after
- ✓ You leave with the numbers, whether or not you buy

QUESTIONS

Frequently asked

What is Medhava?

Medhava is a unified ERP made of 20 modules and 98 apps that all read and write one shared data core — Item/SKU, Party, Stock, Ledger and Order. Because the data is shared, a single action such as a goods receipt updates stock, the ledger, quality records and the vendor scorecard at the same time.

How is Medhava different from Zoho or Odoo?

Does Medhava support Indian GST?

Which marketplaces does Medhava connect to?

Can Medhava be used outside textiles?

Is my data safe?

Can I use it without internet?

How long does implementation take?

Stop reconciling. Start running.

See your own numbers inside Medhava. Bring one month of sales, purchases and stock — we will show you what your current tools are hiding.
