

UNIFIED ERP — ANY INDUSTRY

CRM & Customer 360

Lead to won, then the whole lifetime — on one record

Module 02 · CRM — App 1 of 4

Lead to won, then the whole lifetime — every order, return, document and question on one record.

- One file · opens by double-click
- Works offline
- One customer, never two records
- 42 / 42 self-tests pass

What this is, and what is inside

One record per customer, carrying everything: the deal on the way in, and every order, return, document and question after it.

One record per customer, carrying everything. On the way in it is a pipeline: a lead moves from New to Contacted to Quoted to Negotiation, and every stage carries a real probability, so the forecast is honest instead of hopeful. Win it and the SAME record becomes the customer — never a second copy. From then on it carries every order, every return, what they are actually worth after returns, which of six behaviour groups they fall into, and — because this module shares one spine — every document filed against them and every question they have ever asked.

It is a single HTML file. It opens by double-click, runs with the internet switched off, saves your work in the browser, and checks its own arithmetic and its own rules **42 different ways** every time it starts.

What this document covers

1. What this is, and what is inside

2. The spine of this module: one record

3. Screen · Overview

4. Screen · Pipeline

5. Winning a deal — and the rule that stops a second record

6. Screen · Customers

7. Screen · Customer 360 — the whole point of the module

8. Screen · Segments and offers

9. Every figure, and where it comes from

10. Connectors — nothing is locked to one company

11. The three rules the app enforces on itself

12. What this app can be wired to

13. The 42 self-tests, in full (1 of 2)

14. The 42 self-tests, in full (2 of 2)

15. How to run it, and what it will not do

The spine of this module: one record

The three apps in Module 02 are not three programs that talk to each other. They are **three views of one record** — the party.

What this app reads, and from where

COMES FROM	WHAT IT SUPPLIES
Sales	Every order, its channel, and anything returned
Accounting	Whether the customer actually paid, and how late
Catalog	What they bought, so the next offer makes sense
Marketing	Which campaign the lead arrived from
E-commerce / OMS	Marketplace orders and returns against the same party record
Documents	Agreements and certificates filed against the party or its orders
Helpdesk	Tickets raised by that party, and how quickly they were answered

All four apps of this module are built from one engine file and one screen file. Not four codebases that agree — one implementation, compiled four times.

Screen · Overview

The pipeline on the left, and what needs a decision on the right — from all three apps at once.

Look at the right-hand panel. Quiet customers come from the orders, unanswered tickets come from the helpdesk, and unsigned documents come from the filing. Nobody typed any of them, and they are on one list because they are about one record.

The five cards

Open pipeline

Every deal still being chased, added up. The number everybody quotes.

Likely to close

Each deal multiplied by the odds of its stage.
This is the one to plan on.

Win rate

Won ÷ (won + lost). Open deals are not counted — they have not happened yet.

Customers worth

Everybody you have won, added up, after returns.

Needs a hand

Quiet customers + open tickets + documents waiting on a signature.

OPEN DEALS

5

still being chased

OPEN VALUE

₹25,10,000.00

if every one landed

LIKELY TO CLOSE

₹12,58,500.00

weighted by stage

AVERAGE WON DEAL

₹4,22,500.00

from 2 won

By stage

STAGE	DEALS	ODDS	VALUE	LIKELY
New	1	10%	2,85,000.00	28,500.00
Contacted	1	25%	4,20,000.00	1,05,000.00
Quoted	2	50%	9,15,000.00	4,57,500.00
Negotiation	1	75%	8,90,000.00	6,67,500.00

Every open deal

DEAL	CAME FROM	STAGE	VALUE	AGE	
Priya Menon Northline Retail Pvt Ltd	Website enquiry	New 10%	2,85,000.00	13d	Mark won
Rahul Shetty Metro Distributors	Referral	Contacted 25%	4,20,000.00	29d	Mark won
Anita Rao Harbour Trading Co	Trade show	Quoted 50%	6,75,000.00	47d	Mark won
Vikram Nair Sunrise Enterprises	Cold outreach	Negotiation 75%	8,90,000.00	64d	Mark won
Deepak Iyer Coastal Wholesale	Marketplace lead	Quoted 50%	2,40,000.00	31d	Mark won

Already won

DEAL	BECAME	VALUE
Sanjay Kulkarni	Highland Stores	5,10,000.00
Meera Joshi	Riverside Retail	3,35,000.00

Winning a deal does not create a second record. If that organisation is already on the books, the win is attached to the record you already have.

Why deals were lost

REASON	DEALS	VALUE
Price too high	1	2,90,000.00
Went to a competitor	1	1,75,000.00
Timing not right	1	1,30,000.00

Worth reading before the next price decision. "Price too high" at the top usually means the quote arrived late, not that the price was wrong.

Every open deal, its stage, its odds and its age — and where the lost ones went.

Every stage carries a real probability. New 10%, Contacted 25%, Quoted 50%, Negotiation 75%. Multiply and add, and you get a forecast you can plan against instead of a wish list. The gap between the two columns is the honest part.

The Age column turns red past 45 days. A deal sitting in "Quoted" for two months is not a deal, it is a habit.

The "why deals were lost" table is worth reading before the next price decision. "Price too high" at the top usually means the quote arrived late, not that the number was wrong.

Winning a deal — and the rule that stops a second record

Press **Mark won** and one of two things happens. Which one, and why, is the most important rule in this app.

- 1

That organisation is already on the books. The deal attaches to the record you have. Nothing new appears. Their history now includes this win.
- 2

They are genuinely new. One party record is opened, and the won deal points at it.
- 3

It cannot be pressed twice. A won deal leaves the open list, so the button is gone; and the engine refuses the second win anyway, by name. Winning the same work twice would put it in the forecast twice and the same customer on the books twice.

Six groups, one rule set

Worked out from behaviour, never tagged by hand — so they update themselves the moment somebody buys or goes quiet.

How somebody lands in each group

GROUP	THE RULE	PARTIES	WORTH	SHARE
Champion	4 or more orders, and bought within 45 days	2	11,82,686.00	
Loyal	2 or more orders, and bought within 60 days	1	1,88,389.00	
Needs attention	2 or more orders, but quiet for 60–90 days	1	1,77,080.00	
At risk	Nothing for 90–180 days	1	2,54,080.00	
Sleeping	Nothing for more than 180 days	1	1,86,980.00	
New	One order, or none yet	2	39,580.00	

What to do about each one

GROUP	THE AGREED ACTION
Champion	Give them first look at new lines and hold their price. Ask for a referral — they will give one.
Loyal	Nudge the order size up. A small volume break costs less than finding a new customer.
Needs attention	One phone call, not a discount. Find out what changed before assuming it is price.
At risk	Call within the week. Ask what went wrong on the last order — usually something did.
Sleeping	One clear win-back offer with a deadline. If it does not land, stop spending on them.
New	Make the second order easy. The gap between one order and two is where most customers are lost.

Why bother

Most businesses treat every customer the same and then wonder why marketing money does nothing. These six groups are worked out from behaviour — how often somebody buys and how long ago — so the same effort goes where it will actually return something. A Champion needs holding on to; a Sleeping customer needs one last try and then letting go.

Six groups, the rule that puts somebody in each, and the agreed action.

Nobody is tagged by hand. There is no "segment" field on a party record — a self-test checks that there is not. The group is worked out from how often they buy and how long ago, every time the screen opens, so it changes itself the moment somebody buys or goes quiet.

The second table is the part that saves arguments: **one agreed action per group**, so the same customer gets the same answer whoever opens the record.

Every figure, and where it comes from

This is the same table as the app's Wiring screen, so you have it on paper.

FIGURE	COMES FROM	HOW IT IS WORKED OUT
Open pipeline	CRM itself (this app owns leads)	Every deal still open, added up
Likely to close	CRM + stage odds	Each deal × the probability of its stage: New 10%, Contacted 25%, Quoted 50%, Negotiation 75%
Win rate	CRM	Deals won ÷ (deals won + deals lost)
Customer worth	Sales	Every order that party placed, minus everything they sent back
Returns and return %	Sales returns	Returned value ÷ gross ordered value, per party
Average order value	Sales	Customer worth ÷ number of orders they placed
Last order date	Sales	The newest order on that party — this is what drives the segment
Segment	All of the above	One rule set on order count and days since last order — never tagged by hand
What to offer next	Segment	One agreed action per group, so the same customer gets the same answer whoever opens the record
Documents on the record	Documents	Everything filed against that party, or against one of their orders
Questions on the record	Helpdesk	Every ticket that party has raised, with how fast it was answered
Conversation log	CRM itself	Calls, visits and promises you record — the only thing here that is typed in

The rules of the whole module, in one place

RULE	WHAT IT MEANS IN PRACTICE
One party, never two	Winning a deal for an organisation already on the books attaches to that record. Two records for one customer means two answers to "what are they worth".
A document belongs to a record	Not to a folder. Filing against a record that does not exist is refused, because the document could never be found from the only place anybody looks.
A signature is a one-time code	Six digits, to the named signer, back from them, recorded against the document. No code, no signature — including on import.
The first-reply clock is derived	The gap between the ticket opening and our first message. There is no field to type it into.
A ticket cannot be closed unanswered	Ignoring somebody and marking it "resolved" is refused.
A ticket names its own party's order	Attaching anybody else's is refused, on screen and on import.
Behaviour groups are rules	Order count and days since the last order. Nobody tags anybody by hand, so nothing goes stale.

Connectors — nothing is locked to one company

This is the promise, and the app checks it on itself every time it opens: **no Medhava app depends on any single outside service**. Not one accounting package, not one marketplace, not one AI company, not one automation tool, not one courier.

"Outside services required: 0" is not a marketing line — it is one of this app's self-tests.

The three rules the app enforces on itself

- 1

No capability has only one choice. Every one has at least three; most have eight to twelve.
- 2

Every capability has a built-in or by-hand option — so the app is fully usable with **nothing connected at all**. No account anywhere, no internet, no subscription. That is how it ships, and it is the default it starts on.
- 3

Every capability has an option you can host yourself — so you are never forced to send your business data to somebody else's cloud, whatever the fashion of the day is.

All three appear as ordinary self-tests on the **Backup & Health** screen, in plain English, alongside the rest — so you can confirm them yourself in five seconds.

Switching a provider never changes a figure. The arithmetic lives in Medhava, not in the service. Move from one courier to another and every past shipping record stays exactly as it was — only new labels come from somewhere else. There is a self-test for exactly this: *"switching a provider changes nothing else in your data"*.

What the four tags on the screen mean

TAG	WHAT IT MEANS FOR YOU
built in	Ships inside Medhava. Needs nothing, costs nothing, works offline.
you host it	You run it on your own machine or server. Your data never leaves your control.
their cloud	Somebody else's service, connected with a scoped, revocable key.
by hand	A person does it, or a CSV goes in and out. Always available.

Why this rule exists at all. Software that can only work with one outside company is not a tool you own — it is a bet on somebody else staying cheap, staying available and staying in business. Every capability here has a way out, including a way that needs nobody.

What this app can be wired to

CRM & Customer 360 uses **6** capabilities and offers **56** alternatives across them. Every one is a button on the Connectors screen — click it and you have switched.

CAPABILITY	THE OPTIONS, IN FULL
Books & ledger	Medhava Books · Tally · BUSY · Marg · Zoho Books · QuickBooks · ERPNext · CSV in / CSV out
Sales channels	Type them in · CSV import · Amazon · Flipkart · Myntra · Meesho · Ajio · Nykaa · JioMart · Shopify · WooCommerce · Medusa / self-hosted store
Automation	Medhava Rules · n8n (self-hosted) · Node-RED (self-hosted) · Windmill (self-hosted) · Apache Airflow · n8n Cloud · Make · Zapier · Pipedream · Cron + webhook · Do it by hand
Customer messaging	Copy the message and send it yourself · WhatsApp Cloud API · Gupshup · Interakt · MSG91 · Twilio · Email instead (any SMTP) · Chatwoot (self-hosted)
Email sending	Download the PDF and email it yourself · Any SMTP server · Amazon SES · SendGrid · Postmark · Mailgun · Zoho Mail · Brevo
Files & backups	This device · A USB drive · MinIO (self-hosted) · Nextcloud (self-hosted) · Google Drive · Dropbox · OneDrive · Amazon S3 · Backblaze B2

Cloud services use a **scoped, revocable key** — **never your password**. A key can be limited to only what it needs and cancelled in one click from the service's own side, without touching your login. **Medhava will never ask you for a marketplace, bank or account password**. If any screen ever does, it is not Medhava.

What if the tool you use is not on the list?

Then it becomes one more button. A provider is a small adapter — read from there, write to there — and the app around it does not change, because the arithmetic never lived in the provider. Adding one does not touch a single figure, a single screen or a single self-test.

WHEN A PROVIDER IS ADDED OR SWAPPED	WHAT HAPPENS
Your existing records	Untouched. Nothing is migrated, because nothing was stored in the provider.
Every figure on every screen	Identical — there is a self-test that proves this.
Your saved work and settings	Untouched.
The self-tests	Same list, same names, still passing.
What you have to relearn	Nothing. The screens do not change.

The practical version of the promise: if a service you use doubles its price, changes its terms, or shuts down, you click a different button. You do not change software, you do not re-enter data, and you do not lose a day.

The 42 self-tests, in full (1 of 2)

These run every time the app opens, **before** anything is shown. Menu → **Backup & Health** to see them live. They are written in plain language on purpose — you should be able to read what was checked.

RESULT	WHAT WAS CHECKED
✓ pass	every button this app offers is really on one of its own screens
✓ pass	open, won and lost together are every lead
✓ pass	open pipeline is the open deals added up
✓ pass	the weighted pipeline is always smaller than the raw one
✓ pass	each stage weights by its own odds
✓ pass	win rate counts only settled deals, never the open ones
✓ pass	every lost deal carries a reason
✓ pass	the lost-reason totals add back up to the lost value
✓ pass	there is an open deal with an organisation already on the books
✓ pass	winning it attaches to the record we already had
✓ pass	and does NOT create a second party
✓ pass	winning the same deal twice is refused
✓ pass	winning a genuinely new organisation does open a record
✓ pass	and the party count goes up by exactly one
✓ pass	the won lead now points at the party it became
✓ pass	customer worth is orders minus returns
✓ pass	average order value is worth divided by orders
✓ pass	return % is returns over gross
✓ pass	everybody added together is the total worth
✓ pass	the channel mix for one party adds back up to their worth
✓ pass	every party lands in exactly one group

The 42 self-tests, in full (2 of 2)

Continued. The last group are the **Connectors** checks — the ones that keep the no-lock-in promise honest.

RESULT	WHAT WAS CHECKED
✓ pass	the group counts add up to every party
✓ pass	a party who has never ordered is New
✓ pass	a party quiet for over 180 days is Sleeping
✓ pass	every group has an agreed action against it
✓ pass	nobody is tagged by hand — no party record carries a group
✓ pass	a customer record shows the documents filed against them
✓ pass	a customer record shows the questions they have asked
✓ pass	the timeline carries orders, documents, tickets and notes together
✓ pass	the timeline is newest first
✓ pass	every order on that party appears on their timeline
✓ pass	this app can do five things, and signing and answering are not among them
✓ pass	none of them can sign a document or close a ticket
✓ pass	every capability this app uses is a known one
✓ pass	no capability offers only one choice
✓ pass	every capability works with nothing connected (built-in or by hand)
✓ pass	every capability has an option you can host yourself
✓ pass	exactly one provider is active per capability
✓ pass	the default provider never needs an outside service
✓ pass	no single company is unavoidable across capabilities
✓ pass	switching a provider changes which one is active
✓ pass	switching a provider changes nothing else in your data

If you ever see a red "fail", stop trusting the numbers on screen. Take a backup, reload the file, and report which line failed. Software that tells you when it is broken is worth more than software that is quietly wrong.

How to run it, and what it will not do

Running it

1. **Windows:** extract the ZIP, then double-click the `.html` file. That is the whole installation.
2. **Mac:** unpack the ZIP, double-click the file. Safari opens it.
3. **Android:** Files app → Downloads → tap the file → open with Chrome. Then ⋮ → **Add to Home screen**.
4. **iPhone / iPad:** Files app → tap the file → Safari. Then Share → **Add to Home Screen**.
5. No internet needed, ever. No account, no licence key, no setup wizard.

Keeping your data safe

Your records live in your own browser on your own device — nowhere else, and never on anybody's server. Take a backup weekly: **Backup & Health** → **Export JSON**. To move to another device, carry the file and the backup, then **Import JSON**.

Backup & Health — your data controls, and the live test results below them.

What it will not do

- ▶ It cannot sign a document or answer a ticket — those belong to the apps whose rules they are. Two self-tests read this app's own code to prove it.
- ▶ In this single-file form it does not pull live from your other systems; the hosted version of Medhava is what connects those pipes.
- ▶ It does not sync between your devices on its own — use the backup file.
- ▶ It has no user accounts or passwords. Whoever can open your device can open the app.
- ▶ **It will never ask you for a marketplace, bank or account password.** If any screen ever does, it is not Medhava.

Accepted when: the app opens by double-click with no internet · all 42 self-tests show pass · winning a deal for an organisation already on the books does not create a second record · the Customer 360 timeline carries orders, documents, tickets and notes together · a backup exports and imports cleanly.
