

VASTRANGAM EDITION

Group Consolidation

Several companies · one set of figures · nothing counted twice

Module 01 · Dashboard & BI — App 3 of 4

Ethnic Fashion, Vastrangam and Adini Couture — one set of figures, honestly added up.

- One file · opens by double-click
- Works offline
- Unlimited companies — the plan is the only cap
- 34 / 34 self-tests pass

What this is, and what is inside

Group Consolidation adds every company you run into **one set of books** — with what they billed each other taken back out first, because a group cannot sell to itself.

All three companies rolled into one set of books. Sales, cash, stock and profit added up across the group, with the stitching bills the companies raise on each other removed first — Adini Couture invoicing Vastrangam is real for both of them and is not a sale for the group. Adini Couture has no tax registration of its own, so it counts in every group figure and is refused entry to a GST return. And Adini is a seller name on the marketplace, not a fourth company: its orders are Vastrangam's sales, and this app will not let anyone turn it into a company.

It is a single HTML file. It opens by double-click, runs with the internet switched off, saves your work in the browser, and checks its own arithmetic **34 different ways** every time it starts.

What this document covers

- 1. What this is, and what is inside
- 2. Where this app sits
- 3. The three rules a group total has to obey
- 4. Screen · Group figures
- 5. Screen · Company by company
- 6. Screen · Between your own companies
- 7. Screen · Who may file a return
- 8. The refusal — and why it is the feature
- 9. Screen · Companies and the names you sell under
- 10. Try to turn a trading name into a company
- 11. Screen · Wiring
- 12. Every figure, and where it comes from
- 13. Connectors — nothing is locked to one company
- 14. The three rules the app enforces on itself
- 15. What this app can be wired to
- 16. The 34 self-tests, in full (1 of 2)
- 17. The 34 self-tests, in full (2 of 2)
- 18. How to run it, and what it will not do

Where this app sits

Every Medhava app stands on **one shared Data Core**: Item/SKU, Party, Stock, Ledger/Voucher and Order. Each module writes into it; Module 01 is the module that reads it.

What it reads, and from where

COMES FROM	WHAT IT SUPPLIES
Platform	The list of companies, their GSTINs, and the plan you are on
E-commerce / OMS	Marketplace orders tagged with the seller name and the company behind it
Sales	Invoices and credit notes, tagged with the company that raised them
Purchase	Mill bills per company, including stitching bills from Adini Couture
Inventory	What each company is holding and what it cost
Accounting & GST	Opening balances, expenses and the figures a GST return is built from
CEO Dashboard	Uses the same engine, so one company here equals that company there

All four apps of this module are built from one engine file and one screen file. Not four codebases that agree — one implementation, compiled four times. That is why the CEO Dashboard, a report and the group roll-up can never disagree about a figure, and why the fourth app in this module can honestly be all three at once.

The three rules a group total has to obey

Adding up several companies is easy. Adding them up **honestly** takes three rules, and this app enforces all three in the engine rather than describing them in a manual.

- 1

What your companies billed each other comes back out. A group cannot sell to itself. The bill is real for the company that raised it and real for the company that paid it — and it is not revenue for the group.
- 2

A company with no tax registration is still a company. It counts in every group figure, and it is **refused** entry to a tax return. Two different questions; both answered correctly.
- 3

A name you sell under is not a company. Vastrangam sells under two seller names on the same marketplace, and both are Vastrangam. Making it one would count the same orders twice in every figure on these screens, so it is refused.

Each of these is also a self-test. They are not policies somebody has to remember on a busy Friday — they are conditions the file checks on itself before it will show you a screen.

The group - Figures

Group figures

Every company added together, with what they billed each other taken back out first.

PERIOD

Apr

May

Jun

Jul

Full year

One company or all of them — this screen is always all of them. Every row below is one company.

GROUP NET SALES

₹6,15,410.00

after removing internal billing

GROUP PROFIT

₹26,410.00

4% margin

GROUP CASH

₹8,84,230.00

across every company

GROUP STOCK

₹13,17,580.00

at cost

COMPANIES

3

2 with a registration

How the group total is arrived at

Every company's net sales, added up

₹6,96,410.00

- What your companies billed each other

₹81,000.00

= Group net sales

₹6,15,410.00

Every company's purchases, added up

₹3,43,000.00

- The same internal billing, on the buying side

₹81,000.00

= Group purchases

₹2,62,000.00

- Making / wages

₹95,000.00

- Running costs

₹3,32,000.00

= Group profit

₹26,410.00

Notice that the elimination appears twice and cancels itself. That is not a coincidence — an internal bill is income to one of your companies and a cost to another, so removing it changes what the group sold and never changes what the group earned.

Where the sales came from

Ethnic Fashion profit: ₹1,420.00

₹2,83,730.00

Vaistrangam profit: ₹30,313.50

₹2,49,863.50

Adini Couture (no registration) profit: ₹2,483.50

₹1,62,816.50

Sold outside the group

₹6,76,000.00

Billed between your own companies

₹81,000.00

The first line is business you won. The second is work moving inside the group. Only the first grows the business.

Every company added together, with internal billing removed — and the arithmetic shown, not hidden.

The left panel is the whole point of this app. It does not just show the group total; it shows the total *being arrived at*, line by line, with the elimination visible on both sides. A consolidated figure you cannot reconstruct is a figure you cannot defend to a bank, a buyer or an auditor.

Notice the elimination appears twice and cancels itself. An internal bill is income to one of your companies and a cost to another. So removing it changes what the group *sold* and never changes what the group *earned* — which is why "removing internal billing never changes group profit" is a self-test.

Added together before anything is removed					Net: ₹6,96,410.00 · Profit: ₹26,410.00	

Cash, stock and who owes whom

COMPANY	CASH + BANK	STOCK	TO COLLECT	TO PAY
Ethnic Fashion	4,66,773.00	2,57,509.00	2,47,909.00	2,12,909.00
Vastrangam	3,41,829.50	7,01,880.00	94,209.00	92,409.00
Adini Couture	75,627.50	3,58,209.00	2,12,809.00	1,89,509.00

What this table is for

A group total is an average with the arguments removed. The point of this screen is to put them back.

- A company with good sales and a **negative margin** is being carried.
- A company with cash and no stock is a **trading arm**; one with stock and no cash is a **making arm**. They should not be judged the same way.
- Balances — cash, stock, what is owed — **do not move** when you change the period, because a balance is a position.

The same figures, one row each. A healthy group total can hide a company that is losing money.

A group total is an average with the arguments removed. The point of this screen is to put them back.

- ▶ A company with good sales and a **negative margin** is being carried. Whether that is a problem depends on why — but you should know.

▶ A company with cash and no stock is a **trading arm**; one with stock and no cash is a **making arm**. They should not be judged by the same margin.

▶ **Balances do not move when you change the period.** Cash, stock, what is owed — those are positions, and they are the same on the last day of any month you pick.

▶ The last column says plainly which companies can file a return and which cannot.

Add the "Net sales" column up and you get the "added together" line at the bottom — which is the group figure **before** the elimination. The difference between that and the headline on the previous screen is exactly what your companies billed each other.

INTERNAL BILLING

₹81,000.00

In this period

ENTRIES

2

Invoices between your companies

GROUP SALES WITHOUT REMOVING IT

₹6,96,410.00

the flattering figure

GROUP SALES AFTER REMOVING IT

₹6,15,410.00

the honest one

Every internal invoice in this period

MONTH	BILLED BY	BILLED TO	WHAT FOR	AMOUNT
Jul 2026	Adini Couture	Ethnic Fashion	Stitching done for the selling companies	48,600.00
Jul 2026	Adini Couture	Vastrangam	Stitching done for the selling companies	32,400.00
Removed from the group figures				₹81,000.00

Why removing it does not change the profit

1

The company that raised the invoice booked it as **income**.

2

The company that received it booked exactly the same amount as a **cost**.

3

Added together, they are already **zero**. So group profit was never wrong.

4

Group **sales**, though, counted the money once. That is the figure this screen corrects.

This is why a group can quote a turnover far larger than it earned, without anybody lying: nobody removed the internal billing.

Where it shows up elsewhere

An internal invoice travels on its own channel, called **Between our own companies**, so it is never mistaken for business won outside.

On the Overview and Sales screens that channel is tagged **own group**. In the report builder you can drop it with one filter: Channel **is not** Between our own companies.

It is never hidden. Hiding it would be the same mistake in the other direction — for the company that did the work, that invoice is its whole living.

Every internal invoice in the period, and the two group totals side by side — with and without it.

This is how a group quotes a turnover far larger than it earned, without anybody lying. Nobody removed the internal billing. The two cards on this screen put the flattering figure and the honest one next to each other so the difference is impossible to miss.

Why it never moves the profit

- 1

The company that raised the invoice booked it as **income**.
- 2

The company that received it booked the same amount as a **cost**.
- 3

Added together they are already **zero**. Group profit was never wrong.
- 4

Group **sales**, though, counted the money once. That is the figure this screen corrects.

It is **never hidden**. An internal invoice travels on its own channel so it can be separated — but it stays on the books of the company that raised it, because for that company it is the whole living.

Return figures · Ethnic Fashion

accepted

Registration	24AABFE1234K129
Gross sales	₹1,14,900.00
Returns / credit notes	₹31,170.00
Net sales	₹83,730.00
Purchases	₹1,66,500.00

These are this company's own figures. The group total is a different question and is answered on the Group figures screen.

The two questions people confuse

QUESTION

ANSWER FOR A COMPANY WITH NO REGISTRATION

Does it count in my group figures?

Yes, always. Its sales, costs, cash and stock are all in every total.

Can it file a return?

No. It has no registration to file under.

Most software answers both questions the same way, and you end up either losing a company from your group figures or filing something you should not have.

What happens when the company does get registered

Put the registration number on it in Companies & names. Nothing else changes: the same records, the same group figures, and from that moment it can build a return.

No migration, no re-entry, no second company. The registration is a field on the company, not the reason it exists.

Return figures ready

A registered company: its own figures, for its own registration.

Every company is listed with its registration if it has one, its net sales for the period, and a button. Press the button on a registered company and you get its own figures — **its own**, not the group's, because a return is filed by a company and not by a group.

The “Counts in group figures” column says **always** on every row, including the rows that cannot file. That column exists precisely because the two questions get confused.

The refusal — and why it is the feature

Adini Couture	none	1,62,816.50	always	Build its return

Refused

Adini Couture

Adini Couture has no tax registration of its own, so it cannot file a return. Its figures still count in every group total — that is a different question from filing.

This is the app doing its job. A return filed for a company that has no registration is not a small mistake; it is a filing in somebody else's name. So it is not offered, not warned about, and not possible.

The two questions people confuse

QUESTION

ANSWER FOR A COMPANY WITH NO REGISTRATION

Does it count in my group figures?

Yes, always. Its sales, costs, cash and stock are all in every total.

Can it file a return?

No. It has no registration to file under.

No migration, no re-entry, no second company. The registration is a field on the company, not the reason it exists.

Refused

The company with no registration. Refused, in words, with the reason.

This is the app doing its job. A return filed for a company that has no registration is not a small mistake; it is a filing in somebody else's name. So it is not offered, not warned about, and not possible.

The two questions people confuse

QUESTION	ANSWER FOR A COMPANY WITH NO REGISTRATION
Does it count in my group figures?	Yes, always. Its sales, costs, cash and stock are in every total.
Can it file a return?	No. It has no registration to file under.

Most software answers both questions the same way. Answer "no" to both and you lose a real company out of your group figures. Answer "yes" to both and you file something you should not have. Adini Couture only does stitching for the other two companies — a real business, with real wages and real costs, and nothing of its own to file.

When the company does get registered: put the number on it in Companies & names. Nothing else changes — same records, same group figures, and from that moment it can build a return. No migration, no re-entry, no second company.

e.g. NEW

COMPANY NAME

TAX REGISTRATION (LEAVE EMPTY IF IT HAS NONE)

WHAT IT DOES

Add company

A company with no registration is perfectly normal — a job-work arm, a new venture, a branch that bills through another. It counts in every group figure and is kept out of returns.

Names you sell under

not companies

TRADING NAME	BELONGS TO	USED ON	
Go4Fashion	Ethnic Fashion	Own website and marketplace listings	Try making this a company
Vastrangam	Vastrangam	Marketplace seller name	Try making this a company
Adiri	Vastrangam	Marketplace seller name — every order is invoiced as Vastrangam	Try making this a company

Press that button on any row. The refusal you get is the rule working: a seller name is not a business, and counting it as one would double every figure it touches.

TRADING NAME

BELONGS TO

Ethnic Fashion

USED ON

Add trading name

Two lists that must never merge: the companies you run, and the names you sell under.

Add a company here, remove one, or add a trading name and point it at the company whose sales it is. The **Room left** card tells you how many more your plan covers.

Removing a company that still has records against it is refused. The refusal says how many records and why: they would be left belonging to nobody, and every group figure would quietly change. Move or delete the records first, deliberately.

The number of companies you may run is a fact about your subscription, never about the software. The refusal you get at the limit says so in those words — it names the plan, and it says the software has no limit of its own.

Press that button on any row. The refusal you get is the rule working: a seller name is not a business, and counting it as one would double every figure it touches.

TRADING NAME

BELONGS TO

USED ON

Add trading name

Refused — and the reason is arithmetic, not policy.

"Adini" is a name you sell under, not a business. Its orders already belong to a company and are already counted under that company. Making it a company of its own would count them a second time, in group sales, in group profit, and in every share you quote.

Adini is a seller name on Flipkart, and every order under it is invoiced as Vastrangam. Adini Couture, on the other hand, IS a separate company — it does job work and has no registration of its own. Both facts are true at once, and this app keeps them apart: one is a row in the trading-name list, the other is a row in the company list.

The button is there on purpose. A rule you can read is a rule you half-believe; a rule you can try to break, and watch refuse, is one you understand.

Where every group figure comes from

This app owns no records. It reads the same Data Core as every other app and rolls it up.

Shared Data Core: ItemSKU · Party · Stock · Ledgeroucher · Order — every module reads and writes these.

Every figure on these screens, and its source

FIGURE HERE	COMES FROM	HOW IT IS WORKED OUT
Companies	Platform (companies)	Ethnic Fashion, Vastrangam and Adini Couture, with their GSTINs where they have one
Trading names	Platform (companies) + Sales	Go4Fashion, Vastrangam and Adini — each pointing at the company whose sales they are
Per-company sales	E-commerce / OMS + Sales	Net sales worked out separately for each company, for the period on screen
Between your own companies	Sales + Purchase	Adini Couture's stitching bills on the other two — real for both of them, not a sale for the group
Group net sales	E-commerce / OMS + Sales	All three companies added together, minus everything they billed each other
Group profit	Sales + Purchase + HR & Payroll + Accounting & GST	Every company's profit added up. Internal billing cancels itself, so it never moves this line
Group cash	Accounting & GST (ledger)	Every company's opening balance plus everything it has earned or spent since
Group stock	Inventory & Catalog (fabric and finished)	What every company is holding, valued at cost
GST return eligibility	GST & Tax	Adini Couture has no registration, so it cannot file. This is refused, not warned about
Plan limit	Platform (subscription)	How many companies your plan covers. The software itself sets no limit

The three rules, in one place

1 Internal billing comes out.

2 No registration is not no company.

3 A trading name is not a company.

How many companies you may have

The software sets no limit. Twenty companies, or two. What limits you is the plan you are on — currently Enterprise, which covers 20.

That distinction matters when you are choosing software: a cap written into the product is a rebuild, and a cap written into a plan is a decision you can change on a Tuesday.

Where every group figure comes from, and the three rules in one place.

This app owns no records. It reads the same Data Core as the CEO Dashboard and the Report Builder, using the same engine file — so a single company's row here is exactly what the dashboard shows when you switch to that company. There is a self-test for that too.

Medhava · Group Consolidation — Vastrangam edition

12 / 19

Every figure, and where it comes from

This is the same table as the app's Wiring screen, so you have it on paper.

FIGURE	COMES FROM	HOW IT IS WORKED OUT
Companies	Platform (companies)	Ethnic Fashion, Vastrangam and Adini Couture, with their GSTINs where they have one
Trading names	Platform (companies) + Sales	Go4Fashion, Vastrangam and Adini — each pointing at the company whose sales they are

GST return eligibility	GST & Tax	Adini Couture has no registration, so it cannot file. This is refused, not warned about
Plan limit	Platform (subscription)	How many companies your plan covers. The software itself sets no limit

The arithmetic of the whole module, in one place

NAME	WORKED OUT AS
Net sales	gross sales – returns
Return %	returns ÷ gross sales × 100
Gross profit	net sales – purchases – wages
Net profit	gross profit – running costs
Margin %	net profit ÷ net sales × 100
Cash + bank	opening cash + opening bank + all-time net profit
Stock value	for every item: quantity × cost, added together
Net position	cash + what you are owed – what you owe
Cost per piece	wages for the month ÷ pieces made that month
Group net sales	every company's net sales added up, – what they billed each other
Group profit	every company's profit added up. Internal billing cancels itself out

Every figure is rounded to two decimal places at the moment it is calculated, so a total can never disagree with the rows above it by a stray paisa.

This is the promise, and the app checks it on itself every time it opens: **no Medhava app depends on any single outside service**. Not one accounting package, not one marketplace, not one AI company, not one automation tool, not one courier.

The three rules the app enforces on itself

- 1

No capability has only one choice. Every one has at least three; most have eight to twelve.
- 2

Every capability has a built-in or by-hand option — so the app is fully usable with **nothing connected at all**. No account anywhere, no internet, no subscription. That is how it ships, and it is the default it starts on.
- 3

Every capability has an option you can host yourself — so you are never forced to send your business data to somebody else's cloud, whatever the fashion of the day is.

All three appear as ordinary self-tests on the **Backup & Health** screen, in plain English, alongside the rest — so you can confirm them yourself in five seconds.

Switching a provider never changes a figure. The arithmetic lives in Medhava, not in the service. Move from one courier to another and every past shipping record stays exactly as it was — only new labels come from somewhere else. There is a self-test for exactly this: *"switching a provider changes nothing else in your data"*.

What the four tags on the screen mean

TAG	WHAT IT MEANS FOR YOU
built in	Ships inside Medhava. Needs nothing, costs nothing, works offline.
you host it	You run it on your own machine or server. Your data never leaves your control.
their cloud	Somebody else's service, connected with a scoped, revocable key.
by hand	A person does it, or a CSV goes in and out. Always available.

Why this rule exists at all. Software that can only work with one outside company is not a tool you own — it is a bet on somebody else staying cheap, staying available and staying in business. Every capability here has a way out, including a way that needs nobody.

What this app can be wired to

Group Consolidation uses **5** capabilities and offers **43** alternatives across them. Every one is a button on the Connectors screen — click it and you have switched.

CAPABILITY	THE OPTIONS, IN FULL
Books & ledger	Medhava Books · Tally · BUSY · Marg · Zoho Books · QuickBooks · ERPNext · CSV in / CSV out
Sales channels	Type them in · CSV import · Amazon · Flipkart · Myntra · Meesho · Ajo · Nykaa · JioMart · Shopify · WooCommerce · Medusa / self-hosted store
Files & backups	This device · A USB drive · MinIO (self-hosted) · Nextcloud (self-hosted) · Google Drive · Dropbox · OneDrive · Amazon S3 · Backblaze B2
GST & returns	Your CA files it · Medhava GST returns · GST offline utility (your own machine) · GSTN portal direct · ClearTax · Tally · BUSY · Zoho Books · Marg
Printing	Browser print / PDF · Any ESC/POS thermal printer · Zebra label printer · TVS printer · No printer — share the PDF

Cloud services use a **scoped, revocable key** — **never your password**. A key can be limited to only what it needs and cancelled in one click from the service's own side, without touching your login. **Medhava will never ask you for a marketplace, bank or account password**. If any screen ever does, it is not Medhava.

What if the tool you use is not on the list?

Then it becomes one more button. A provider is a small adapter — read from there, write to there — and the app around it does not change, because the arithmetic never lived in the provider. Adding one does not touch a single figure, a single screen or a single self-test.

WHEN A PROVIDER IS ADDED OR SWAPPED	WHAT HAPPENS
Your existing records	Untouched. Nothing is migrated, because nothing was stored in the provider.
Every figure on every screen	Identical — there is a self-test that proves this.
Your saved work and settings	Untouched.
The self-tests	Same list, same names, still passing.
What you have to relearn	Nothing. The screens do not change.

The practical version of the promise: if a service you use doubles its price, changes its terms, or shuts down, you click a different button. You do not change software, you do not re-enter data, and you do not lose a day.

The 34 self-tests, in full (1 of 2)

These run every time the app opens, **before** anything is shown. Menu → **Backup & Health** to see them live. They are written in plain language on purpose — you should be able to read what was checked.

RESULT	WHAT WAS CHECKED
✓ pass	group net sales = every company added up, minus internal billing
✓ pass	removing internal billing never changes group profit
✓ pass	group sales after removal equal what was sold outside the group
✓ pass	every internal invoice has a company on both sides
✓ pass	internal billing is on its own channel, never mixed into a real one
✓ pass	there is a company with no tax registration in the group
✓ pass	a company with no registration still counts in the group figures
✓ pass	asking for its return is refused, not warned about
✓ pass	the refusal says why, in words a person can act on
✓ pass	a registered company can build its return
✓ pass	its return uses its own figures, not the group's
✓ pass	there is at least one trading name on file
✓ pass	every trading name belongs to a company that exists
✓ pass	turning a trading name into a company is refused
✓ pass	the company list did not grow when that was refused
✓ pass	the plan names a company limit and it is more than one
✓ pass	adding past the plan limit is refused

The 34 self-tests, in full (2 of 2)

Continued. The last group are the **Connectors** checks — the ones that keep the no-lock-in promise honest.

RESULT	WHAT WAS CHECKED
✓ pass	the refusal blames the plan, not the software
✓ pass	a company can be added once there is room
✓ pass	a company added with no registration is accepted as a company
✓ pass	two companies can never share a code
✓ pass	the group figures obey the period
✓ pass	every month added up equals the full year
✓ pass	group cash is a position — it does not move with the period
✓ pass	group figures equal the dashboard when one company is picked
✓ pass	every capability this app uses is a known one
✓ pass	no capability offers only one choice
✓ pass	every capability works with nothing connected (built-in or by hand)
✓ pass	every capability has an option you can host yourself
✓ pass	exactly one provider is active per capability
✓ pass	the default provider never needs an outside service
✓ pass	no single company is unavoidable across capabilities
✓ pass	switching a provider changes which one is active
✓ pass	switching a provider changes nothing else in your data

If you ever see a red "fail", stop trusting the numbers on screen. Take a backup, reload the file, and report which line failed. Software that tells you when it is broken is worth more than software that is quietly wrong.

- ## Keeping your data safe

[illegible]

What it will not do

- Accepted when: the app opens by double-click with no internet · all 34 self-tests show pass · a company with no registration is refused a return and still counts · a trading name cannot be made into a company · adding past the plan limit is refused · a backup exports and imports cleanly.**
