

VASTRANGAM EDITION

# CRM & Customer 360

Lead to won, then the whole lifetime — on one record

Module 02 · CRM — App 1 of 4

Lead to won, then the whole lifetime — every order, return, document and question on one record.

- One file · opens by double-click
- Works offline
- One customer, never two records
- 42 / 42 self-tests pass

# What this is, and what is inside

One record per customer, carrying everything: the deal on the way in, and every order, return, document and question after it.

One record per buyer, carrying everything. On the way in it is a pipeline: a lead moves from New to Contacted to Quoted to Negotiation, each stage with a real probability, so the forecast is honest instead of hopeful. Win it and the SAME record becomes the buyer — never a second copy. From then on it carries every order, every marketplace return, what they are actually worth after returns, which of six behaviour groups they fall into, and every agreement filed against them and every question they have ever asked.

It is a single HTML file. It opens by double-click, runs with the internet switched off, saves your work in the browser, and checks its own arithmetic and its own rules **42 different ways** every time it starts.

### What this document covers

1. What this is, and what is inside
2. The spine of this module: one record
3. Screen · Overview
4. Screen · Pipeline
5. Winning a deal — and the rule that stops a second record
6. Screen · Customers
7. Screen · Customer 360 — the whole point of the module
8. Screen · Segments and offers
9. Every figure, and where it comes from
10. Connectors — nothing is locked to one company
11. The three rules the app enforces on itself
12. What this app can be wired to
13. The 42 self-tests, in full (1 of 2)
14. The 42 self-tests, in full (2 of 2)
15. How to run it, and what it will not do

# The spine of this module: one record

The three apps in Module 02 are not three programs that talk to each other. They are **three views of one record** — the party.

## What this app reads, and from where

| COMES FROM       | WHAT IT SUPPLIES                                                  |
|------------------|-------------------------------------------------------------------|
| Sales            | Every order, its channel, and anything returned                   |
| Accounting       | Whether the buyer actually paid, and how late                     |
| Catalog          | What they bought, so the next offer makes sense                   |
| Marketing        | Which campaign the lead arrived from                              |
| E-commerce / OMS | Marketplace orders and returns against the same party record      |
| Documents        | Agreements and test reports filed against the party or its orders |
| Helpdesk         | Tickets raised by that party, and how quickly they were answered  |

All four apps of this module are built from one engine file and one screen file. Not four codebases that agree — one implementation, compiled four times.

# Screen · Overview

The pipeline on the left, and what needs a decision on the right — from all three apps at once.

Look at the right-hand panel. Quiet customers come from the orders, unanswered tickets come from the helpdesk, and unsigned documents come from the filing. Nobody typed any of them, and they are on one list because they are about one record.

## The five cards

### Open pipeline

Every deal still being chased, added up. The number everybody quotes.

### Likely to close

Each deal multiplied by the odds of its stage.  
**This is the one to plan on.**

### Win rate

Won ÷ (won + lost). Open deals are not counted — they have not happened yet.

### Buyers worth

Everybody you have won, added up, after returns.

### Needs a hand

Quiet customers + open tickets + documents waiting on a signature.

₹12,58,500.00

weighted by stage

AVERAGE WON DEAL

₹4,22,500.00

from 2 won

By stage

| STAGE       | DEALS | ODDS | VALUE       | LIKELY      |
|-------------|-------|------|-------------|-------------|
| New         | 1     | 10%  | 2,85,000.00 | 28,500.00   |
| Contacted   | 1     | 25%  | 4,20,000.00 | 1,05,000.00 |
| Quoted      | 2     | 50%  | 9,15,000.00 | 4,57,500.00 |
| Negotiation | 1     | 75%  | 8,90,000.00 | 6,67,500.00 |

Every open deal

| DEAL                                       | CAME FROM        | STAGE           | VALUE       | AGE |          |
|--------------------------------------------|------------------|-----------------|-------------|-----|----------|
| Priya Menon<br>Rajmandir Wholesale (Surat) | Website enquiry  | New 10%         | 2,85,000.00 | 13d | Mark won |
| Rahul Shetty<br>Chandni Chowk Boutique     | Referral         | Contacted 25%   | 4,20,000.00 | 29d | Mark won |
| Anita Rao<br>Kanchi Silks House            | Exhibition       | Quoted 50%      | 6,75,000.00 | 47d | Mark won |
| Vikram Nair<br>Gulf Ethnic Trading FZE     | Cold outreach    | Negotiation 75% | 8,90,000.00 | 64d | Mark won |
| Deepak Iyer<br>Coastal Ethnic Wholesale    | Marketplace lead | Quoted 50%      | 2,40,000.00 | 31d | Mark won |

Already won

| DEAL            | BECAME           | VALUE       |
|-----------------|------------------|-------------|
| Sanjay Kulkarni | Highland Stores  | 5,10,000.00 |
| Meera Joshi     | Riverside Ethnic | 3,35,000.00 |

Winning a deal does not create a second record. If that organisation is already on the books, the win is attached to the record you already have.

Why deals were lost

| REASON                   | DEALS | VALUE       |
|--------------------------|-------|-------------|
| Rate too high            | 1     | 2,90,000.00 |
| Went to another supplier | 1     | 1,75,000.00 |
| Season already covered   | 1     | 1,30,000.00 |

Worth reading before the next price decision. "Price too high" at the top usually means the quote arrived late, not that the price was wrong.

Every open deal, its stage, its odds and its age — and where the lost ones went.

Every stage carries a real probability. New 10%, Contacted 25%, Quoted 50%, Negotiation 75%. Multiply and add, and you get a forecast you can plan against instead of a wish list. The gap between the two columns is the honest part.

The Age column turns red past 45 days. A deal sitting in "Quoted" for two months is not a deal, it is a habit.

The "why deals were lost" table is worth reading before the next price decision. "Rate too high" at the top usually means the quote arrived late, not that the number was wrong.

# Winning a deal — and the rule that stops a second record

Press **Mark won** and one of two things happens. Which one, and why, is the most important rule in this app.

- 1

**That organisation is already on the books.** The deal attaches to the record you have. Nothing new appears. Their history now includes this win.
- 2

**They are genuinely new.** One party record is opened, and the won deal points at it.
- 3

**It cannot be pressed twice.** A won deal leaves the open list, so the button is gone; and the engine refuses the second win anyway, by name. Winning the same work twice would put it in the forecast twice and the same customer on the books twice.

Conversation log

2026-07-21 - Call

Confirmed the July despatch arrived complete. Wants the same lead time before the festive cut.

2026-06-09 - Visit

Met at their Surat office. Interested in the Banarasi line if we can hold the rate for six months.

CALL, VISIT OR EMAIL

Call

WHAT HAPPENED

Called about the July order — asked for longer terms

Record it

One party. Orders, documents, tickets, notes and the original lead, in one list, newest first.

The timeline is the argument for these three apps being one module. Orders come from Sales, documents from Documents & eSign, tickets from Helpdesk, notes and the lead from here. Not copied — read. Whoever picks up the phone has all of it before they say a word.

The cards above it

| CARD   | WHAT IT MEANS                                                                   |
|--------|---------------------------------------------------------------------------------|
| Worth  | Everything they ordered, minus everything they sent back. Not the gross figure. |
| Orders | How many, and the average size.                                                 |

Six groups, one rule set

Worked out from behaviour, never tagged by hand — so they update themselves the moment somebody buys or goes quiet.

How somebody lands in each group

| GROUP           | THE RULE                                    | PARTIES | WORTH        | SHARE       |
|-----------------|---------------------------------------------|---------|--------------|-------------|
| Champion        | 4 or more orders, and bought within 45 days | 2       | 11,82,688.00 | <div></div> |
| Loyal           | 2 or more orders, and bought within 60 days | 1       | 1,88,389.00  | <div></div> |
| Needs attention | 2 or more orders, but quiet for 60–90 days  | 1       | 1,77,080.00  | <div></div> |
| At risk         | Nothing for 90–180 days                     | 1       | 2,54,080.00  | <div></div> |
| Sleeping        | Nothing for more than 180 days              | 1       | 1,86,980.00  | <div></div> |
| New             | One order, or none yet                      | 2       | 39,580.00    | <div></div> |

What to do about each one

| GROUP           | THE AGREED ACTION                                                                               |
|-----------------|-------------------------------------------------------------------------------------------------|
| Champion        | Give them first look at new lines and hold their rate. Ask for a referral — they will give one. |
| Loyal           | Nudge the order size up. A small volume break costs less than finding a new buyer.              |
| Needs attention | One phone call, not a discount. Find out what changed before assuming it is rate.               |
| At risk         | Call within the week. Ask what went wrong on the last order — usually something did.            |
| Sleeping        | One clear win-back offer with a deadline. If it does not land, stop spending on them.           |
| New             | Make the second order easy. The gap between one order and two is where most buyers are lost.    |

Why bother

Most businesses treat every buyer the same and then wonder why marketing money does nothing. These six groups are worked out from behaviour — how often somebody buys and how long ago — so the same effort goes where it will actually return something. A Champion needs holding on to; a Sleeping buyer needs one last try and then letting go.

Six groups, the rule that puts somebody in each, and the agreed action.

**Nobody is tagged by hand.** There is no "segment" field on a party record — a self-test checks that there is not. The group is worked out from how often they buy and how long ago, every time the screen opens, so it changes itself the moment somebody buys or goes quiet.

The second table is the part that saves arguments: **one agreed action per group**, so the same customer gets the same answer whoever opens the record.

# Every figure, and where it comes from

This is the same table as the app's Wiring screen, so you have it on paper.

| FIGURE                  | COMES FROM                       | HOW IT IS WORKED OUT                                                                          |
|-------------------------|----------------------------------|-----------------------------------------------------------------------------------------------|
| Open pipeline           | CRM itself (this app owns leads) | Every deal still open, added up                                                               |
| Likely to close         | CRM + stage odds                 | Each deal × the probability of its stage: New 10%, Contacted 25%, Quoted 50%, Negotiation 75% |
| Win rate                | CRM                              | Deals won ÷ (deals won + deals lost)                                                          |
| Buyer worth             | Sales                            | Every order that party placed, minus everything they sent back                                |
| Returns and return %    | E-commerce / OMS (returns)       | Returned value ÷ gross ordered value, per party                                               |
| Average order value     | Sales                            | Buyer worth ÷ number of orders they placed                                                    |
| Last order date         | Sales                            | The newest order on that party — this is what drives the segment                              |
| Segment                 | All of the above                 | One rule set on order count and days since last order — never tagged by hand                  |
| What to offer next      | Segment                          | One agreed action per group, so the same buyer gets the same answer whoever opens the record  |
| Documents on the record | Documents                        | Everything filed against that party, or against one of their orders                           |
| Questions on the record | Helpdesk                         | Every ticket that party has raised, with how fast it was answered                             |
| Conversation log        | CRM itself                       | Calls, visits and promises you record — the only thing here that is typed in                  |

## The rules of the whole module, in one place

| RULE                                 | WHAT IT MEANS IN PRACTICE                                                                                                                                 |
|--------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|
| One party, never two                 | Winning a deal for an organisation already on the books attaches to that record. Two records for one customer means two answers to "what are they worth". |
| A document belongs to a record       | Not to a folder. Filing against a record that does not exist is refused, because the document could never be found from the only place anybody looks.     |
| A signature is a one-time code       | Six digits, to the named signer, back from them, recorded against the document. No code, no signature — including on import.                              |
| The first-reply clock is derived     | The gap between the ticket opening and our first message. There is no field to type it into.                                                              |
| A ticket cannot be closed unanswered | Ignoring somebody and marking it "resolved" is refused.                                                                                                   |
| A ticket names its own party's order | Attaching anybody else's is refused, on screen and on import.                                                                                             |
| Behaviour groups are rules           | Order count and days since the last order. Nobody tags anybody by hand, so nothing goes stale.                                                            |

# Connectors — nothing is locked to one company

This is the promise, and the app checks it on itself every time it opens: **no Medhava app depends on any single outside service**. Not one accounting package, not one marketplace, not one AI company, not one automation tool, not one courier.

"Outside services required: 0" is not a marketing line — it is one of this app's self-tests.

# The three rules the app enforces on itself

- 1

No capability has only one choice. Every one has at least three; most have eight to twelve.
- 2

Every capability has a built-in or by-hand option — so the app is fully usable with **nothing connected at all**. No account anywhere, no internet, no subscription. That is how it ships, and it is the default it starts on.
- 3

Every capability has an option you can host yourself — so you are never forced to send your business data to somebody else's cloud, whatever the fashion of the day is.

All three appear as ordinary self-tests on the **Backup & Health** screen, in plain English, alongside the rest — so you can confirm them yourself in five seconds.

**Switching a provider never changes a figure.** The arithmetic lives in Medhava, not in the service. Move from one courier to another and every past shipping record stays exactly as it was — only new labels come from somewhere else. There is a self-test for exactly this: *"switching a provider changes nothing else in your data"*.

## What the four tags on the screen mean

| TAG         | WHAT IT MEANS FOR YOU                                                          |
|-------------|--------------------------------------------------------------------------------|
| built in    | Ships inside Medhava. Needs nothing, costs nothing, works offline.             |
| you host it | You run it on your own machine or server. Your data never leaves your control. |
| their cloud | Somebody else's service, connected with a scoped, revocable key.               |
| by hand     | A person does it, or a CSV goes in and out. Always available.                  |

**Why this rule exists at all.** Software that can only work with one outside company is not a tool you own — it is a bet on somebody else staying cheap, staying available and staying in business. Every capability here has a way out, including a way that needs nobody.

# What this app can be wired to

CRM & Customer 360 uses **6** capabilities and offers **56** alternatives across them. Every one is a button on the Connectors screen — click it and you have switched.

| CAPABILITY         | THE OPTIONS, IN FULL                                                                                                                                                          |
|--------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Books & ledger     | Medhava Books · Tally · BUSY · Marg · Zoho Books · QuickBooks · ERPNext · CSV in / CSV out                                                                                    |
| Sales channels     | Type them in · CSV import · Amazon · Flipkart · Myntra · Meesho · Ajio · Nykaa · JioMart · Shopify · WooCommerce · Medusa / self-hosted store                                 |
| Automation         | Medhava Rules · n8n (self-hosted) · Node-RED (self-hosted) · Windmill (self-hosted) · Apache Airflow · n8n Cloud · Make · Zapier · Pipedream · Cron + webhook · Do it by hand |
| Customer messaging | Copy the message and send it yourself · WhatsApp Cloud API · Gupshup · Interakt · MSG91 · Twilio · Email instead (any SMTP) · Chatwoot (self-hosted)                          |
| Email sending      | Download the PDF and email it yourself · Any SMTP server · Amazon SES · SendGrid · Postmark · Mailgun · Zoho Mail · Brevo                                                     |
| Files & backups    | This device · A USB drive · MinIO (self-hosted) · Nextcloud (self-hosted) · Google Drive · Dropbox · OneDrive · Amazon S3 · Backblaze B2                                      |

Cloud services use a **scoped, revocable key** — **never your password**. A key can be limited to only what it needs and cancelled in one click from the service's own side, without touching your login. **Medhava will never ask you for a marketplace, bank or account password**. If any screen ever does, it is not Medhava.

## What if the tool you use is not on the list?

Then it becomes one more button. A provider is a small adapter — read from there, write to there — and the app around it does not change, because the arithmetic never lived in the provider. Adding one does not touch a single figure, a single screen or a single self-test.

| WHEN A PROVIDER IS ADDED OR SWAPPED | WHAT HAPPENS                                                                |
|-------------------------------------|-----------------------------------------------------------------------------|
| Your existing records               | Untouched. Nothing is migrated, because nothing was stored in the provider. |
| Every figure on every screen        | Identical — there is a self-test that proves this.                          |
| Your saved work and settings        | Untouched.                                                                  |
| The self-tests                      | Same list, same names, still passing.                                       |
| What you have to relearn            | Nothing. The screens do not change.                                         |

**The practical version of the promise:** if a service you use doubles its price, changes its terms, or shuts down, you click a different button. You do not change software, you do not re-enter data, and you do not lose a day.

# The 42 self-tests, in full (1 of 2)

These run every time the app opens, **before** anything is shown. Menu → **Backup & Health** to see them live. They are written in plain language on purpose — you should be able to read what was checked.

| RESULT | WHAT WAS CHECKED                                                 |
|--------|------------------------------------------------------------------|
| ✓ pass | every button this app offers is really on one of its own screens |
| ✓ pass | open, won and lost together are every lead                       |
| ✓ pass | open pipeline is the open deals added up                         |
| ✓ pass | the weighted pipeline is always smaller than the raw one         |
| ✓ pass | each stage weights by its own odds                               |
| ✓ pass | win rate counts only settled deals, never the open ones          |
| ✓ pass | every lost deal carries a reason                                 |
| ✓ pass | the lost-reason totals add back up to the lost value             |
| ✓ pass | there is an open deal with an organisation already on the books  |
| ✓ pass | winning it attaches to the record we already had                 |
| ✓ pass | and does NOT create a second party                               |
| ✓ pass | winning the same deal twice is refused                           |
| ✓ pass | winning a genuinely new organisation does open a record          |
| ✓ pass | and the party count goes up by exactly one                       |
| ✓ pass | the won lead now points at the party it became                   |
| ✓ pass | customer worth is orders minus returns                           |
| ✓ pass | average order value is worth divided by orders                   |
| ✓ pass | return % is returns over gross                                   |
| ✓ pass | everybody added together is the total worth                      |
| ✓ pass | the channel mix for one party adds back up to their worth        |
| ✓ pass | every party lands in exactly one group                           |

# The 42 self-tests, in full (2 of 2)

Continued. The last group are the **Connectors** checks — the ones that keep the no-lock-in promise honest.

| RESULT | WHAT WAS CHECKED                                                          |
|--------|---------------------------------------------------------------------------|
| ✓ pass | the group counts add up to every party                                    |
| ✓ pass | a party who has never ordered is New                                      |
| ✓ pass | a party quiet for over 180 days is Sleeping                               |
| ✓ pass | every group has an agreed action against it                               |
| ✓ pass | nobody is tagged by hand — no party record carries a group                |
| ✓ pass | a customer record shows the documents filed against them                  |
| ✓ pass | a customer record shows the questions they have asked                     |
| ✓ pass | the timeline carries orders, documents, tickets and notes together        |
| ✓ pass | the timeline is newest first                                              |
| ✓ pass | every order on that party appears on their timeline                       |
| ✓ pass | this app can do five things, and signing and answering are not among them |
| ✓ pass | none of them can sign a document or close a ticket                        |
| ✓ pass | every capability this app uses is a known one                             |
| ✓ pass | no capability offers only one choice                                      |
| ✓ pass | every capability works with nothing connected (built-in or by hand)       |
| ✓ pass | every capability has an option you can host yourself                      |
| ✓ pass | exactly one provider is active per capability                             |
| ✓ pass | the default provider never needs an outside service                       |
| ✓ pass | no single company is unavoidable across capabilities                      |
| ✓ pass | switching a provider changes which one is active                          |
| ✓ pass | switching a provider changes nothing else in your data                    |

If you ever see a red "fail", stop trusting the numbers on screen. Take a backup, reload the file, and report which line failed. Software that tells you when it is broken is worth more than software that is quietly wrong.

# How to run it, and what it will not do

## Running it

1. **Windows:** extract the ZIP, then double-click the `.html` file. That is the whole installation.
2. **Mac:** unpack the ZIP, double-click the file. Safari opens it.
3. **Android:** Files app → Downloads → tap the file → open with Chrome. Then ⋮ → **Add to Home screen**.
4. **iPhone / iPad:** Files app → tap the file → Safari. Then Share → **Add to Home Screen**.
5. No internet needed, ever. No account, no licence key, no setup wizard.

## Keeping your data safe

Your records live in your own browser on your own device — nowhere else, and never on anybody's server. Take a backup weekly: **Backup & Health** → **Export JSON**. To move to another device, carry the file and the backup, then **Import JSON**.

Backup & Health — your data controls, and the live test results below them.

## What it will not do

- ▶ It cannot sign a document or answer a ticket — those belong to the apps whose rules they are. Two self-tests read this app's own code to prove it.
- ▶ In this single-file form it does not pull live from your marketplace panels; the hosted version of Medhava is what connects those pipes.
- ▶ It does not sync between your devices on its own — use the backup file.
- ▶ It has no user accounts or passwords. Whoever can open your device can open the app.
- ▶ **It will never ask you for a marketplace, bank or account password.** If any screen ever does, it is not Medhava.

**Accepted when: the app opens by double-click with no internet · all 42 self-tests show pass · winning a deal for an organisation already on the books does not create a second record · the Customer 360 timeline carries orders, documents, tickets and notes together · a backup exports and imports cleanly.**
