

UNIFIED ERP — ANY INDUSTRY

Report Builder

Pick · Group · Filter · Run — an answer in three clicks

Module 01 · Dashboard & BI — App 2 of 4

Ask any question of your own data — pick, group, filter, run. No formulas, no waiting.

- One file · opens by double-click
- Works offline
- Saves the question, not the answer
- 40 / 40 self-tests pass

What this is, and what is inside

The Report Builder lets you ask your own data almost any question — **without writing a formula and without waiting for anybody**.

A report writer built for someone who does not write formulas. Choose what to look at (sales, money owed, stock, running costs, production, purchases), choose how to group it — including by company — leave out what you do not want, and the answer appears immediately. Save the question, not the answer, and it recalculates on fresh data every time you run it. Everything downloads as CSV or Excel.

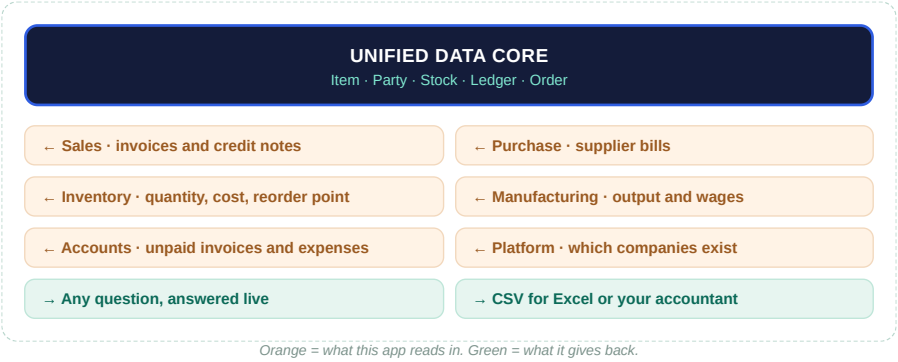

It is a single HTML file. It opens by double-click, runs with the internet switched off, saves your work in the browser, and checks its own arithmetic **40 different ways** every time it starts.

What this document covers

- 1. What this is, and what is inside
- 2. Where this app sits
- 3. The process — three steps and an answer
- 4. Screen · Build a report
- 5. Step 1 · the six things you can look at
- 6. Step 2 · arranging it (and the Top-N trap)
- 7. Step 3 · filters, with a worked example
- 8. The same records, grouped by company
- 9. Screen · Ready-made reports
- 10. A ready-made report, loaded and running
- 11. Screen · My saved reports
- 12. Screen · Wiring, and why it always agrees
- 13. Every figure, and where it comes from
- 14. Connectors — nothing is locked to one company
- 15. The three rules the app enforces on itself
- 16. What this app can be wired to
- 17. The 40 self-tests, in full (1 of 2)
- 18. The 40 self-tests, in full (2 of 2)
- 19. How to run it, and what it will not do

Where this app sits

Every Medhava app stands on **one shared Data Core**: Item/SKU, Party, Stock, Ledger/Voucher and Order. Each module writes into it; Module 01 is the module that reads it.

What it reads, and from where

COMES FROM	WHAT IT SUPPLIES
Sales	Invoices and credit notes with their channel tag
Accounting & GST	Unpaid invoices, unpaid bills, expense vouchers
Inventory	Quantity on hand, cost price, reorder point
Manufacturing	Pieces produced and wages booked
Purchase	Supplier bills, month by month
Platform	Which companies exist, so any report can be grouped by company
CEO Dashboard	Uses the same engine, so a report always agrees with the dashboard

All four apps of this module are built from one engine file and one screen file. Not four codebases that agree — one implementation, compiled four times. That is why the CEO Dashboard, a report and the group roll-up can never disagree about a figure, and why the fourth app in this module can honestly be all three at once.

The process — three steps and an answer

The whole app is these three steps. Everything else is a shortcut to them.

- 1 Pick what to look at.** Six buttons: Sales · Money owed · Stock · Running costs · Production · Purchases. Changing this resets the other two steps, because a filter about channels means nothing once you are looking at stock.
- 2 Say how it should be arranged.** Group the rows by something (sales by channel, by month, or by company), sort by any column, biggest or smallest first, and show all rows or just the top few.
- 3 Leave out what you do not want.** Add filters like `Channel is Own Website`. Each one appears as a chip you can remove with a click. A record has to satisfy **all** of them.
- 4 Read the answer.** It is already there. The badge tells you how many records survived your filters out of how many exist — watch that number when you add a filter, it tells you immediately whether the filter did what you meant.
- 5 Keep it, if it is useful.** Give it a name and press Save. Next month, run it again and it recalculates.

Above all three steps sit the same two dials as the dashboard: **period and company**. They decide which records a report can see *at all*; the filters then narrow what is left. That order matters — and it is why a report and the dashboard always agree.

Save report

Saved reports remember the source, grouping, filters and sort — not the numbers. Run one next month and it recalculates on the new data.

The three numbered steps, and the answer waiting at the bottom.

Four things worth noticing on this screen

- ▶ **There is no "calculate" button you have to remember.** The answer at the bottom is already correct for whatever is selected above it.
- ▶ **The grey line under the source buttons** always tells you what a single row of that source means — so you are never guessing what you are adding up.
- ▶ **The badge in the Result heading** ("20 of 20 records") is your safety check. Add a filter and watch it move; if it does not move, your filter matched nothing you meant.
- ▶ **The bar in the last column** is each row's share of the first measure — the fastest way to see whether one row dominates the total.

Medhava · Report Builder — Unified ERP — any industry

5 / 20

Step 1 · the six things you can look at

SOURCE	ONE ROW IS...	WHAT YOU CAN ADD UP
Sales	One company, one channel, one month	Gross · Returns · Net sales · Units
Money owed	One unpaid customer invoice or supplier bill	Amount · Days
Stock	One item you are holding	Quantity · Value at cost
Running costs	One cost head in one month	Amount
Production	One company, one month on the floor	Pieces made · Wages
Purchases	One supplier in one month	Amount

What you can group each one by

SOURCE	GROUP THE ROWS BY
Sales	Channel · Month · Company
Money owed	Party · Direction · Status · Company
Stock	Item · Status · Company
Running costs	Cost head · Month · Company
Production	Month · Company
Purchases	Supplier · Month · Company

Or choose **"Do not group"** on any source to see every single record, one per line — useful when you want to check the detail behind a total.

Step 2 · arranging it (and the Top-N trap)

CONTROL	WHAT IT DOES
Group the rows by	The most important choice — it decides what one row of the answer represents.
Sort by	Name (A–Z), any of the number columns, or how many records went into each row.
Order	Biggest first, or smallest first.
Show only top	All rows, or the top 3 / 5 / 10.

The Top-N trap, and how this app avoids it. If you ask for "Top 5", most software shows five rows and then puts a total at the bottom that only adds up those five. That is how people end up quoting a number that is quietly wrong. Here, the table shows five rows but **the Total line still counts every matching row** — and it says so, in words, next to the total. There is a self-test that specifically checks this.

Which sort makes sense for which question

YOU ARE ASKING	SORT BY	ORDER
Who is biggest?	The money column	Biggest first
What is a trend?	Name (A–Z)	Smallest first — months come out in order
What is worst?	Days, or Returns	Biggest first
What is nearly empty?	Quantity	Smallest first
Where is the volume, not the value?	Records	Biggest first

The habit worth forming: ask the same question two ways — group by channel, then by company. If the two totals agree, you can trust both answers. If they do not, one of your filters is doing something you did not intend.

Step 3 · filters, with a worked example

Below, one filter has been added. Look at the record count in the Result heading — it changed the moment the filter was added.

Save report

Saved reports remember the source, grouping, filters and sort — not the numbers. Run one next month and it recalculates on the new data.

Grouped by company instead. A completely different story, from exactly the same records.

The total at the bottom is identical to the channel grouping, to the paisa. It has to be — the same records were added up, just piled differently. If regrouping ever changed a total, something would be badly wrong, which is exactly why "grouping by company or by channel gives the same total" is one of the 40 self-tests.

The same records, three useful ways

GROUP BY	ANSWERS	SORT
Channel	Which channel earns most — after returns	Net sales, biggest first
Company	Which of your companies is actually carrying the group	Net sales, biggest first
Month	Are we growing, flat, or slipping?	Name, smallest first

Screen · Ready-made reports

Eleven reports already built, each answering a question owners actually ask. Every card tells you what it looks at, how it is grouped and what has been filtered out — nothing is hidden from you.

Reports · Ready-made

Ready-made reports

Questions most owners ask. One click loads it into the builder — then change anything you like.

These are starting points, not fixed reports. Load one, then add a filter or change the grouping and it is yours.

Which channel actually earns the most?

Busy is not the same as profitable. This ranks every channel by net sales — after returns are taken off.

Looks at Sales, grouped by Channel.

Load & run

Which company is carrying the group?

The same sales, grouped by company instead of channel. The totals are identical; the story is not.

Looks at Sales, grouped by Company.

Load & run

Where are returns eating the profit?

Shows only the bigger channels so the return figure next to gross is worth reading.

Looks at Sales, grouped by Channel, filtered on Gross >= 40000.

Load & run

How is each month trending?

Net sales month by month, oldest to newest, so a dip is obvious.

Looks at Sales, grouped by Month.

Load & run

Who has not paid me?

Only money coming in, biggest first — your collection call list for the week.

Looks at Money owed, grouped by Party, filtered on Direction is To collect.

Load & run

What am I about to be chased for?

Supplier bills already past their due date, worst first.

Looks at Money owed, grouped by Party, filtered on Direction is To pay and Days > 0.

Load & run

Where is my money sitting in stock?

Top 5 items by value at cost — usually where the cash has quietly gone.

Looks at Stock, grouped by Item.

Load & run

What do I have to reorder now?

Only items at or below their reorder point. This is a purchase list, not a warning.

Looks at Stock, grouped by Item, filtered on Status is Reorder now.

Load & run

What are my biggest running costs?

Every cost head added up across the year, biggest first.

Looks at Running costs, grouped by Cost head.

Load & run

Which supplier am I most exposed to?

Everything bought in, by supplier. One name near the top of this list is a risk worth knowing about.

Looks at Purchases, grouped by Supplier.

Load & run

Is the floor getting cheaper or dearer?

Pieces made and wages paid, month by month — divide one by the other to see cost per piece moving.

Looks at Production, grouped by Month.

Load & run

Press "Load & run →" and it drops into the builder, already run. From there it is yours to change.

These are starting points, not fixed reports. Load one, change the grouping, add a filter, save it under your own name — and it is now your report. Nothing about a ready-made report is locked.

Save report

Saved reports remember the source, grouping, filters and sort — not the numbers. Run one next month and it recalculates on the new data.

A ready-made report is just a starting point — every control is still yours to change.

What to change first, once it is loaded

- ▶ Turn "Top 5" into "All rows" if you want the whole picture rather than the headline.
- ▶ Add a filter to narrow it — Status is *Reorder now* turns "where is my cash" into "what must I buy".
- ▶ Change the grouping to Status instead of Item, and the same records answer a completely different question.
- ▶ Save it under your own name — you now have a question you never have to rebuild.

Where every report gets its numbers

The Report Builder stores no figures of its own. It reads the shared Data Core live, every single time you press Run.

Shared Data Core: ItemSKU · Party · Stock · Ledgeroucher · Order — every module reads and writes these.

Every figure on these screens, and its source

FIGURE HERE	COMES FROM	HOW IT IS WORKED OUT
Sales	Sales	One row per company per channel per month — gross, returns, net and units
Money owed	Accounts Receivable + Accounts Payable	One row per unpaid customer invoice or supplier bill, with its age in days
Stock	Inventory & Catalog	One row per item — quantity on hand, cost, reorder point and value
Running costs	Accounting & GST (expense vouchers)	One row per cost head per month — rent, salaries, marketing, logistics
Production	Manufacturing	One row per company per month — pieces finished and wages booked by the floor
Purchases	Purchase	One row per supplier per month — what you bought in

What happens when you press Run

1

The chosen **source** is read fresh from the Data Core — never from a stored copy.

2

The **period and company** you picked decide which records are in scope at all.

3

Your **filters** drop the rows you did not want.

4

What is left is **grouped**, added up and sorted — then trimmed to your Top N, though the Total still counts every matching row.

5

Saving keeps the **question**, not the answer. Next month the same report shows next month's numbers.

Why the numbers always agree with the dashboard

Both apps are built from the **same engine file**. Not similar code — the same code. A Sales report grouped by channel with no filters adds up to exactly the net sales figure on the CEO Dashboard for the same period and the same company.

This is checked automatically — see Backup & Health, where the self-tests prove that grouping never changes a total.

The sources, what feeds them, and exactly what happens when you press Run.

The Report Builder stores no figures of its own. It holds your saved questions and nothing else. Every number you see was read from the Data Core in the moment the screen was drawn — which is why there is no "last refreshed" timestamp anywhere in this app. There is nothing to refresh.

Why a report can never disagree with the CEO Dashboard. They are not two programs that were carefully kept in step. They are one engine file compiled into two apps. A Sales report grouped by channel with no filters adds up to exactly the net sales figure the Dashboard shows for the same period and the same company — and "a report grouped by channel equals the dashboard's net sales" is a self-test that runs every time this file opens.

Every figure, and where it comes from

This is the same table as the app's Wiring screen, so you have it on paper.

FIGURE	COMES FROM	HOW IT IS WORKED OUT
Sales	Sales	One row per company per channel per month — gross, returns, net and units
Money owed	Accounts Receivable + Accounts Payable	One row per unpaid customer invoice or supplier bill, with its age in days
Stock	Inventory & Catalog	One row per item — quantity on hand, cost, reorder point and value
Running costs	Accounting & GST (expense vouchers)	One row per cost head per month — rent, salaries, marketing, logistics
Production	Manufacturing	One row per company per month — pieces finished and wages booked by the floor
Purchases	Purchase	One row per supplier per month — what you bought in

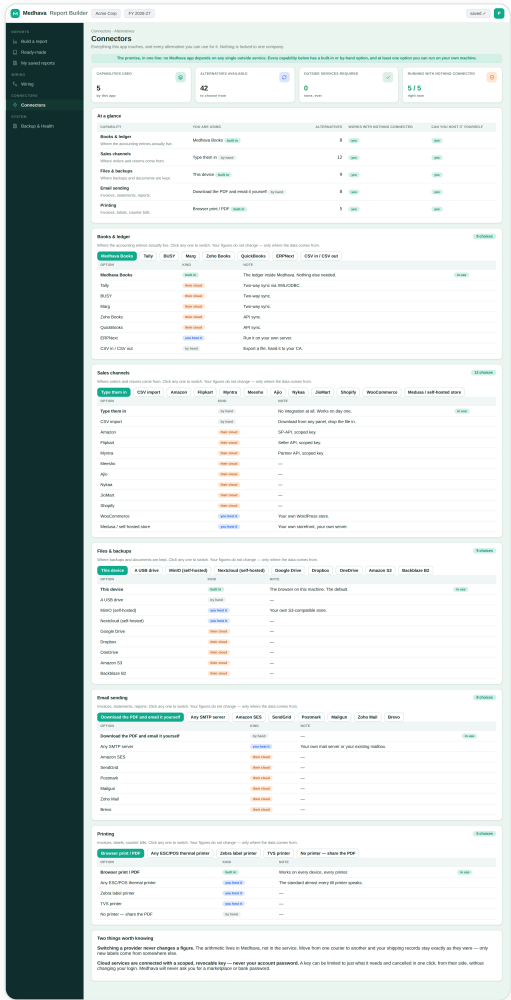

The arithmetic of the whole module, in one place

NAME	WORKED OUT AS
Net sales	gross sales – returns
Return %	returns ÷ gross sales × 100
Gross profit	net sales – purchases – wages
Net profit	gross profit – running costs
Margin %	net profit ÷ net sales × 100
Cash + bank	opening cash + opening bank + all-time net profit
Stock value	for every item: quantity × cost, added together
Net position	cash + what you are owed – what you owe
Cost per piece	wages for the month ÷ pieces made that month
Group net sales	every company's net sales added up, – what they billed each other
Group profit	every company's profit added up. Internal billing cancels itself out

Every figure is rounded to two decimal places at the moment it is calculated, so a total can never disagree with the rows above it by a stray paisa.

Connectors — nothing is locked to one company

This is the promise, and the app checks it on itself every time it opens: **no Medhava app depends on any single outside service**. Not one accounting package, not one marketplace, not one AI company, not one automation tool, not one courier.

"Outside services required: 0" is not a marketing line — it is one of this app's self-tests.

The three rules the app enforces on itself

- 1

No capability has only one choice. Every one has at least three; most have eight to twelve.
- 2

Every capability has a built-in or by-hand option — so the app is fully usable with **nothing connected at all**. No account anywhere, no internet, no subscription. That is how it ships, and it is the default it starts on.
- 3

Every capability has an option you can host yourself — so you are never forced to send your business data to somebody else's cloud, whatever the fashion of the day is.

All three appear as ordinary self-tests on the **Backup & Health** screen, in plain English, alongside the rest — so you can confirm them yourself in five seconds.

Switching a provider never changes a figure. The arithmetic lives in Medhava, not in the service. Move from one courier to another and every past shipping record stays exactly as it was — only new labels come from somewhere else. There is a self-test for exactly this: *"switching a provider changes nothing else in your data"*.

What the four tags on the screen mean

TAG	WHAT IT MEANS FOR YOU
built in	Ships inside Medhava. Needs nothing, costs nothing, works offline.
you host it	You run it on your own machine or server. Your data never leaves your control.
their cloud	Somebody else's service, connected with a scoped, revocable key.
by hand	A person does it, or a CSV goes in and out. Always available.

Why this rule exists at all. Software that can only work with one outside company is not a tool you own — it is a bet on somebody else staying cheap, staying available and staying in business. Every capability here has a way out, including a way that needs nobody.

What this app can be wired to

Report Builder uses **5** capabilities and offers **42** alternatives across them. Every one is a button on the Connectors screen — click it and you have switched.

CAPABILITY	THE OPTIONS, IN FULL
Books & ledger	Medhava Books · Tally · BUSY · Marg · Zoho Books · QuickBooks · ERPNext · CSV in / CSV out
Sales channels	Type them in · CSV import · Amazon · Flipkart · Myntra · Meesho · Ajio · Nykaa · JioMart · Shopify · WooCommerce · Medusa / self-hosted store
Email sending	Download the PDF and email it yourself · Any SMTP server · Amazon SES · SendGrid · Postmark · Mailgun · Zoho Mail · Brevo
Files & backups	This device · A USB drive · MinIO (self-hosted) · Nextcloud (self-hosted) · Google Drive · Dropbox · OneDrive · Amazon S3 · Backblaze B2
Printing	Browser print / PDF · Any ESC/POS thermal printer · Zebra label printer · TVS printer · No printer — share the PDF

Cloud services use a **scoped, revocable key** — **never your password**. A key can be limited to only what it needs and cancelled in one click from the service's own side, without touching your login. **Medhava will never ask you for a marketplace, bank or account password**. If any screen ever does, it is not Medhava.

What if the tool you use is not on the list?

Then it becomes one more button. A provider is a small adapter — read from there, write to there — and the app around it does not change, because the arithmetic never lived in the provider. Adding one does not touch a single figure, a single screen or a single self-test.

WHEN A PROVIDER IS ADDED OR SWAPPED	WHAT HAPPENS
Your existing records	Untouched. Nothing is migrated, because nothing was stored in the provider.
Every figure on every screen	Identical — there is a self-test that proves this.
Your saved work and settings	Untouched.
The self-tests	Same list, same names, still passing.
What you have to relearn	Nothing. The screens do not change.

The practical version of the promise: if a service you use doubles its price, changes its terms, or shuts down, you click a different button. You do not change software, you do not re-enter data, and you do not lose a day.

The 40 self-tests, in full (1 of 2)

These run every time the app opens, **before** anything is shown. Menu → **Backup & Health** to see them live. They are written in plain language on purpose — you should be able to read what was checked.

RESULT	WHAT WAS CHECKED
✓ pass	sales source has one row per company per channel per month
✓ pass	grouping by channel gives one row per channel
✓ pass	grouped totals equal the ungrouped total
✓ pass	net = gross – returns on every row
✓ pass	sorted biggest first
✓ pass	sorting smallest first reverses the order
✓ pass	Top 3 shows exactly 3 rows
✓ pass	Top 3 still totals ALL matching rows, not just 3
✓ pass	a filter cuts the records down
✓ pass	filtering to one channel leaves one group
✓ pass	a number filter (gross ≥ 80,000) works
✓ pass	"contains" matches part of a word
✓ pass	"is not" is the opposite of "is"
✓ pass	a report obeys the period
✓ pass	a report obeys the company
✓ pass	grouping by company gives one row per company
✓ pass	grouping by company or by channel gives the same total
✓ pass	money report: "to collect" equals the receivables total
✓ pass	stock report values every item at qty × cost
✓ pass	items at or below reorder are flagged "Reorder now"

The 40 self-tests, in full (2 of 2)

Continued. The last group are the **Connectors** checks — the ones that keep the no-lock-in promise honest.

RESULT	WHAT WAS CHECKED
✓ pass	running costs by head add up to the same total
✓ pass	purchases report totals the same as the dashboard's purchases line
✓ pass	"do not group" shows every single record
✓ pass	ungrouped and grouped give the same total
✓ pass	a report grouped by channel equals the dashboard's net sales
✓ pass	CSV has a header, every row, and a total line
✓ pass	CSV wraps anything containing a comma in quotes
✓ pass	every ready-made report runs without error
✓ pass	every ready-made report returns at least one row
✓ pass	a saved report reruns to the same answer
✓ pass	all six sources return rows
✓ pass	every capability this app uses is a known one
✓ pass	no capability offers only one choice
✓ pass	every capability works with nothing connected (built-in or by hand)
✓ pass	every capability has an option you can host yourself
✓ pass	exactly one provider is active per capability
✓ pass	the default provider never needs an outside service
✓ pass	no single company is unavoidable across capabilities
✓ pass	switching a provider changes which one is active
✓ pass	switching a provider changes nothing else in your data

If you ever see a red "fail", stop trusting the numbers on screen. Take a backup, reload the file, and report which line failed. Software that tells you when it is broken is worth more than software that is quietly wrong.

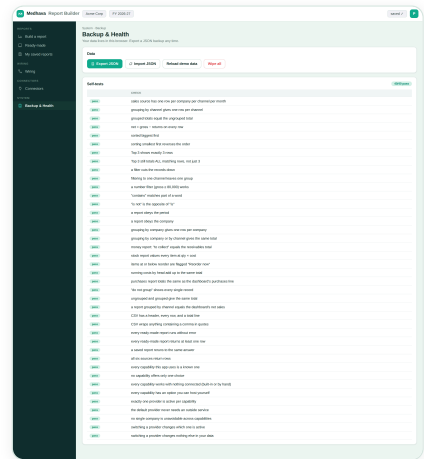

How to run it, and what it will not do

Running it

1. **Windows:** extract the ZIP, then double-click the `.html` file. It opens in your browser. That is the whole installation.
2. **Mac:** unpack the ZIP, double-click the file. Safari opens it.
3. **Android:** Files app → Downloads → tap the file → open with Chrome. Then ⋮ → **Add to Home screen** and it behaves like any other app.
4. **iPhone / iPad:** Files app → tap the file → Safari. Then Share → **Add to Home Screen**.
5. No internet needed, ever. No account, no licence key, no setup wizard.

Keeping your data safe

Your figures live in your own browser on your own device — nowhere else, and never on anybody's server. That means nobody can see them, and also that clearing your browser's site data would erase them. So: **Backup & Health** → **Export JSON**, once a week. To move to another device, take the file and the backup with you and use **Import JSON**.

Backup & Health — your data controls, and the live test results below them.

What it will not do

- ▶ It does not email reports on a schedule — download the CSV and send it.
- ▶ It does not draw charts beyond the share bars; the CSV opens in Excel for anything more elaborate.
- ▶ In this single-file form it does not pull live from your other systems; the hosted version of Medhava is what connects those pipes.
- ▶ It does not sync between your devices on its own — use the backup file.
- ▶ It has no user accounts or passwords. Whoever can open your device can open the app.
- ▶ It will not stop you recording something silly. It checks its own arithmetic, not your judgement.

Accepted when: the app opens by double-click with no internet · all 40 self-tests show pass · a filter changes the record count · Top 5 still totals every matching row · a saved report reruns and matches · a backup exports and imports cleanly.
