Purchase is live — Procurement + Vendor
Management →

Run the whole ethnic wear house on one system

Mill to marketplace in one application. The metre you bought, the karigar who stitched it, the design that sold on Myntra, the return that came back damaged and the GST on all of it — one record, one stock number, one set of books. Nothing re-keyed between them.

Start free for 30 days

Book a demo

- ✓ Free for 30 days

- ✓ Works with the internet off
- ✓ GST, TDS & TCS ready

15

Modules, one login

65

Apps over one data core

1

Stock number for every SKU

7

Marketplaces connected

WHAT MEDHAVA IS

One application. Not eleven that talk to each other.

Every other suite sells you separate products and a sync job between them. Medhava is a single application over one set of records — so there is nothing to synchronise, and nothing to reconcile.

1

Enter it once

A goods receipt, a counter sale, a marketplace order — recorded in one place. Stock, the ledger, the quality record and the supplier scorecard all update in the same instant, because they are reading the same record.

2

Numbers that cannot disagree

One stock figure per SKU. One ledger. One order record. Not a copy per channel that somebody reconciles on Saturday. When the website says four are left, four are left.

3

Built for how India actually runs

GST with input credit on accepted goods, TDS and TCS, seven marketplaces, piece-rate karigar wages — and apps that keep working when the internet does not.

WHAT CHANGES FOR YOU

The same day, before and after

Nothing here is a new way to run your business. It is the work you already do, arranged so that it only has to be done once.

TODAY

- ✗ Log into seven seller panels, one at a time
- ✗ Copy each order into a sheet, then into the books
- ✗ Guess which stock figure is the real one
- ✗ Learn at month-end that a mill over-billed you
- ✗ Chase a marketplace shortfall you spotted six weeks late
- ✗ Ask three people for their file before you can see one number

WITH MEDHAHA

- ✓ One queue, sorted by whichever order is closest to being late
- ✓ The order writes itself into stock and into the ledger
- ✓ There is one stock figure, so there is nothing to choose between
- ✓ An over-billed invoice cannot be paid — the match refuses it
- ✓ Every shortfall is on a screen the day the payout lands
- ✓ Open the dashboard. It was already up to date.

Medhava at a glance

What it is	A unified ERP: 15 modules and 65 apps sharing one data core and one event bus.
Shared data core	Item/SKU · Party · Stock · Ledger & Voucher · Order — every module reads and writes these.
Key difference	Not a suite of integrated apps. One application, so there is no sync step and no duplicate master data.
Compliance	Double-entry accounting with CGST/SGST/IGST, TDS, TCS, ITC on accepted goods, GSTR-1 and GSTR-3B.
Channels	Amazon, Flipkart, Myntra, Meesho, Ajio, Nykaa, JioMart, plus Shopify and WooCommerce.
Security	PostgreSQL row-level security per company; integrations use revocable scoped API keys in an AES-256-GCM vault — never account passwords.
Deployment	Hosted multi-tenant cloud, or single-file offline apps that run by double-clicking with no install.

THE PROBLEM

Your business runs on eleven tools that don't talk

Accounting in one place, stock in a spreadsheet, marketplace orders in seven seller panels, karigar wages in a notebook. Every month-end becomes an archaeology project.

Numbers that disagree

Stock says 40, the marketplace says 12, the books say something else again. Nobody knows which is right, so everyone guesses.

Work entered three times

The same invoice keyed into the seller panel, the spreadsheet and the accounting package. Three chances to be wrong.

Money quietly leaking

Over-billed purchases, unclaimed marketplace shortfalls, RTO losses — invisible until the year is over.

HOW IT WORKS

One data core. One action cascades everywhere.

Every module reads and writes the same five entities. That is the physical reason a single goods receipt can touch stock, books, quality and sourcing at the same instant.

Accepted — not ordered — is what counts

You order 100 metres. 100 arrive. Quality accepts 96. Most systems increase stock by 100 and claim tax credit on 100. Medhava increases stock by **96**, claims input tax credit on **96**, raises a debit note for the 4 rejected, and lowers that mill's accept rate — automatically.

Nothing derived is ever stored

Outstanding, risk, performance, ageing, profit per product — all recomputed on read. They cannot drift out of step with the documents underneath them.

MODULES & APPS

15 modules. 65 apps. One login.

Each module is a complete area of your business. Turn on what you need today — everything else is already wired for the day you need it.

CEO Dashboard

Report Builder

Group Consolidation

CEO Dashboard

Cash, sales by channel, stock by design, profit per piece and the alerts that matter — one screen, refreshed as the day runs.

Group Consolidation

Ethnic Fashion, Vastrangam and Adini Couture as one set of figures, inter-company transfers removed, so the group position is real rather than three spreadsheets added together. Adini Couture has no registration of its own and mainly does job work — it still counts in the group, without being pulled into a return it does not belong in. Add the fourth company the day you open it.

Report Builder

Drag the fields you want into a report and save it for the whole team.

CRM

MODULE 02

3 APPS

Know every boutique, chain and customer completely

One record per party — a Kalamandir or a Rajmandir, a Surat walk-in or a Myntra buyer — carrying every enquiry, order, return, agreement and conversation, whichever channel it arrived on.

Manual Data Check

Reconciliation

Claims & Disputes

Returns / RMA

Channels & Storefronts

Labels & Documents

Marketplace OMS

Myntra, Flipkart, Ajio, Amazon, Meesho, Nykaa and JioMart in a single queue — processed all together, channel-wise, or design-wise. The stages the panels really use, with the right cut-off counting down on each order — a quick-commerce or air-shipped order is not due at the same hour as a standard one. Priority orders at the top, and the day grouped by design so a Muskan Purple is picked once for eleven parcels instead of eleven times.

Order Management

One pipeline from new to delivered, whether the order came from a seller panel, your Shopify or WooCommerce site, a dealer or the counter.

Manual Data Check

The order and return sheets you already download from the panels, and the offline registers from the three shops — one file or a whole ZIP — read back as ten cross-checks: net sale after commission and fees, month, design, state, wrong returns, SPF claims, ads, payouts and GST. Every figure clicks through to the transactions behind it.

Reconciliation

Match every marketplace payout to the order line that earned it, and expose the gap.

Claims & Disputes

Weight disputes, SPF shortfalls, parcels lost in transit and returns that came back with a different piece inside — filed as claims with the packing footage attached, and answered before they close. A claim awaiting your reply is money; one closed for no response is nothing, so the days left sit beside the amount.

Returns / RMA

Customer returns, courier returns and wrong returns kept apart — because only one of the three is really your fault, and only one of them turns into dead stock.

Channels & Storefronts

Connect a channel once and it stays in step: catalogue out, price out, stock out, orders in. Seven marketplaces and any website platform — Shopify, WooCommerce, Magento, BigCommerce, Wix or a custom site over its own API — each switchable without touching your data. Shopsy and any other storefront a channel runs alongside its main one counts as its own channel here. Where a channel has no open interface, its own downloaded report is a first-class way in. A channel may also know you by a different trading name — that is a label on the channel, not a second company, so it tags the order and the payout without ever splitting your books.

Labels & Documents

The panel gives you a PDF; this hands the packing table something it can work from. Cropped to 4×6 for every channel, your design code printed large where the panel left it off, the invoice and slip merged behind it, and the whole batch to the label printer in one job. Reprint one parcel without redoing the lot — and no customer’s name and address is ever uploaded to an outside website to be cropped.

Pick the right design first time — and prove what you sent

Bin-level instructions and barcode scanning so the right piece leaves the godown and stock stays honest — and a recording of each parcel being packed, because a wrong-return claim is settled by footage, not by argument.

Rates & Zones

NDR & RTO Rescue

COD Remittance

Handover & Manifest

Rates & Zones

Every courier's rate card by zone, weight slab and service — so the cheapest and the fastest option for this parcel are both known before it is booked.

COD Remittance

What the courier collected at the door against what reached the Surat account, parcel by parcel, with every shortfall named and aged.

NDR & RTO Rescue

A failed delivery worked while it can still be saved — reattempt, call, correct the address — before it becomes a return you pay for twice.

Handover & Manifest

What is expected out today against what the pickup boy actually took, per courier and per service. The manifest to hand him, the one-time code to confirm it, and a signed note of what was left behind — so a parcel lost between the packing table and the van has an owner.

Maintenance

PLM & Development

Concept to a design that can actually be made: fabric and trim specification, sample rounds with the mill, costed trials against a target price, and sign-off — every version kept, so last season's costing is still there.

Piece-rate & Contractors

Karigars paid by the piece: pooled set completion, per-garment rates, alterations, rework and advances resolved into one payout.

Quality Control

Accept, reject or send for rework, with reasons that feed the mill's accept rate and the karigar's record.

Production Orders

Cutting, stitching, embroidery, washing, finishing and checking — your own stages, with work-in-progress visible at each and nothing lost at the dyer.

BOM & Consumption

What each design consumes — metres of fabric, zari, lining, buttons, packing — costed at today's mill rates.

Maintenance

Machines and the building: what is due for service, when it was last done, what it cost, and what stopped while it was down.

Payout Cycles

Fee & Commission Audit

TCS & TDS Register

Payout Cycles

Every settlement cycle each panel runs — what it should pay, what actually landed in the bank, and on which day — so a late payout is visible the day it is late, not at month end.

TCS & TDS Register

Every rupee the panels deducted as TCS, and TDS on job work, matched against the portal's own figures — so the credit you claim is the credit you are owed.

Fee & Commission Audit

The commission a panel publishes for a category against what it actually took, style by style. A quiet rate change is caught the first time it is applied, not at year end — and your seller tier sits on the same screen, because the tier is what the rate card hangs off, and slipping out of one quietly costs more than any single deduction.

Marketing

MODULE 13

Publisher

Content Engine

Fourteen stages in your own voice — buyer psychology, competitor reading, hooks, the product description, marketplace copy for Amazon and Myntra, ad variations, reel scripts, song lyrics for the reel, the calendar, size chart and alt text.

Image Studio

A phone photo becomes a listing image: layers, free transform, background removal, Myntra 1080×1440 and every other channel preset, watermark and SEO alt text.

Video Studio

Text and image to video, reels and ad cuts sized for every channel.

Design Studio

Banners, festive creatives and thumbnails — templates, layers, undo and redo, any colour, exact sizing and stock elements, exporting PNG, JPG or PDF at whatever size the panel or the printer asks for.

Publisher

One push sends the listing, images and copy to the website and every panel, and reports back what went live and what a panel rejected, with the reason.

Projects & Collaboration

MODULE 15

5 APPS

The work that is not an order — and the talking around it

An exhibition in Hyderabad, a boutique's custom order, a new godown fit-out, a legal matter with a supplier. Work that is not a sales order still has a deadline, a cost and documents — and it belongs on the same records as everything else.

Projects & Cases

An exhibition, a custom order for a chain, a fit-out or a dispute — stages you define, owners, deadlines, documents, hours and real cost, all on one record the ledger can see.

Approvals

One queue for everything waiting on a yes: a mill purchase order, a boutique discount, a leave day, a credit note, a payment. The rule that sent it there is next to it, and the decision goes on the record.

Discuss

The conversation attached to the record it is about — this order, this mill bill, this dispute — so a year later the reason for the decision is still sitting beside it.

Timesheets & Planning

Who is on what this week and the hours that actually went in — against a project, an exhibition or a machine — with billable and non-billable kept apart.

Forum

Questions and answers that outlive a chat — for customers, dealers or staff — with the useful ones kept where the next person will actually find them.

Actions carrying a named user

100%

Documents sent out need a one-time code

100%

Ask & Print

At an exhibition in Hyderabad, send one line from your phone: “ledger Kalamandir”, “print slips”. It comes back as a PDF, or it prints at the Surat office — with nothing plugged into your phone and nothing at the office open to the internet.

BUILT DEEP, NOT WIDE

The controls that pay for the software

Three-way match

A supplier bill only passes when the purchase order, the goods receipt and the invoice agree on price and quantity. Bills that over-charge or over-bill rejected goods are held automatically, with the reason in plain language.

Vendor risk that sees ahead

Risk blends weak performance, spend concentration and overdue bills. Your *best* supplier still flags medium risk when 44% of your buying sits with them — the fact worth knowing before a disruption, not after.

Settlement reconciliation

Import a marketplace settlement, match it to the orders, and see every commission, TCS deduction, weight discrepancy and short payment — with a claim pack ready to file.

Karigar piece-rate

Pooled set completion, per-garment rates, alteration hours and advances roll into each karigar's payout — and into a true cost per piece for every design.

One stock number

One quantity per SKU per location per stage, pushed to every channel. Overselling stops being a monthly apology.

AI studio built in

Listings, ad copy, product photography and reels generated against your own catalogue — not a bolted-on chatbot, but the same data core.

INDUSTRIES

Built on the neutral engine, dressed for this trade

Every screen you are about to read is the same code as the Medhava edition. Only the master data and the words change — which is exactly why a machine shop or a law firm can run it too.

What is different here

Fabric in metres and pieces in numbers on the same item master. Karigar piece-rate with pooled set completion. Design-wise costing to the paise. HSN 5007 / 5208. Wrong-return dead stock treated as the loss it is.

The channels you actually sell on

Myntra, Flipkart, Ajio, Amazon, Meesho, Nykaa and JioMart in one queue, plus the Surat counter, the boutique wholesale book and export to the Gulf — all writing to the same order table.

The people who make it

Cutting, stitching, embroidery, finishing and checking as stages you set. Karigars paid by the piece, staff paid by the month, both in one register and one payout.

The compliance you file

GST on ethnic wear slabs, TCS the marketplaces deduct, TDS on job work, LUT bond and IGST refund on export — all worked out from the same vouchers.

COMPARISON

Medhava vs. a suite of integrated apps

The difference is architectural, not cosmetic.

CAPABILITY	MEDHAVA	TYPICAL SUITE
Architecture	One app, one data core	Many apps, integrated
Master data	Single Item & Party record	Duplicated per app, synced
Stock truth	One number per SKU × location	Per-app, reconciled nightly
Cross-module posting	Instant, via event bus	Scheduled sync jobs
Marketplace settlement	Reconciled to order line + claim pack	Usually a separate tool
Piece-rate manufacturing	Built in	Custom development
AI content & imaging	Native, on your catalogue	Third-party add-on
Offline capability	Single-file apps run offline	Cloud-only

TRUST & SECURITY

Your credentials are never the key

Scoped keys only

Marketplace, bank and courier connections use revocable, scoped API keys held in an AES-256-GCM vault. Medhava never asks for, uses or stores an account password.

Isolation by row

Every record carries a company id and is enforced by PostgreSQL row-level security. Group companies stay separate but consolidate on demand.

Immutable audit

Every posting, price change and permission grant is written to an append-only trail with actor, timestamp and before/after values.

THE GAP

Three categories of software. Nobody sells all three.

You are not short of tools. You are short of one tool that covers all of it — which is why the numbers never agree.

Accounting & ERP suites

Tally · BUSY · Marg · Zoho · Odoo

- ✓ Books, GST, stock, purchase
- ✓ Manufacturing, payroll
- ✗ No marketplace order queue
- ✗ No settlement reconciliation or claims
- ✗ No content, image or video studio

Marketplace OMS platforms

Unicommerce · EliteSecom · SmartHub

- ✓ Panel orders in one queue
- ✓ Inventory sync, settlement
- ✗ No double-entry books, no GST return
- ✗ No manufacturing, purchase or payroll
- ✗ No content, image or video studio

AI content tools

Writing · image · video generators

- ✓ Copy, pictures, reels
- ✗ Knows nothing about your catalogue
- ✗ No orders, no stock, no books
- ✗ Nothing publishes to a channel
- ✗ Nothing reconciles afterwards

Medhava

All three, over one data core

- ✓ Books, GST, stock, purchase, manufacturing, payroll
- ✓ Marketplace and storefront order queue
- ✓ Settlement, claims, returns, packing footage
- ✓ Content, image, design and video studio
- ✓ One record underneath all of it

In an accounting package you will never get a marketplace OMS. In an OMS you will never get your books. In a content tool you will never get either. That is the gap. Medhava is built in it.

THE APPROACH

Built deep, not wide

A long feature list is easy. What is hard is the one control that stops the money leaking — so every module ships with one, and refuses rather than warns.

01

Accepted, not ordered

You order 100. 100 arrive. Quality accepts 96. Most systems raise stock by 100 and claim tax credit on 100. Medhava raises stock by 96, claims credit on 96, raises a debit note for the 4, and lowers that supplier's accept rate. Automatically.

02

The payout, to the order line

Not "the channel paid ₹49.1 lakh". Which order line was short, by how much, against which published commission rate — with the claim pack already assembled and the packing footage attached.

03

Nothing derived is stored

Outstanding, ageing, promise dates, payouts, on-time percentage and risk are recomputed every time you read them. A stored number goes stale the moment the document under it changes. These cannot.

PRICING

Start free. Pay when it runs your business.

The software puts no ceiling on how many companies you run — your plan does, and you move up when you need to. Two of the 15 modules — E-commerce / OMS and the AI Content Engine — are priced on what you actually use, because an order is work and a piece of content is work.

Talk to sales

E-commerce / OMS & AI Content Engine

These two are metered, the way every serious order-management platform prices. You pay for orders that actually shipped and content that was actually produced — not for a seat that sat idle.

E-commerce / OMS PER ORDER PROCESSED

ORDERS A MONTH	PER ORDER	INCLUDED
Up to 1,000	₹2.50	All channels, settlement, returns
1,001 - 10,000	₹1.80	+ claims desk, packing footage
10,001 - 50,000	₹1.40	+ multi-warehouse routing
Above 50,000	On request	+ dedicated throughput

An order is counted once, when it is dispatched. A cancelled or unshipped order is never billed.

AI Content Engine PER PIECE PRODUCED

WHAT IS PRODUCED	COUNTS AS	RATE
Channel listing (title, bullets, description)	1 content	₹6
Social post, caption or ad variation	1 content	₹4
Product image · background, resize, preset	1 content	₹3
Reel or video cut, per finished clip	1 content	₹25

Bring your own model key and the rate drops to the platform fee alone — no lock-in, ever.

REQUEST A DEMO

QUESTIONS

Frequently asked

What is Medhava?

Medhava is a unified ERP made of 15 modules and 65 apps that all read and write one shared data core — Item/SKU, Party, Stock, Ledger and Order. Because the data is shared, a single action such as a goods receipt updates stock, the ledger, quality records and the vendor scorecard at the same time.

How is Medhava different from Zoho or Odoo?

Does Medhava support Indian GST?

Which marketplaces does Medhava connect to?

Can Medhava be used outside textiles?

Is my data safe?

Can I use it without internet?

How long does implementation take?

Stop reconciling. Start running.

See your own numbers inside Medhava. Bring one month of sales, purchases and stock — we will show you what your current tools are hiding.

Run the whole ethnic wear house on one system

Mill to marketplace in one application. The metre you bought, the karigar who stitched it, the design that sold on Myntra, the return that came back damaged and the GST on all of it — one record, one stock number, one set of books. Nothing re-keyed between them.

Start free for 30 days

Apps over one data core

1

Stock number for every SKU

7

Marketplaces connected

WHAT MEDHAVA IS

One application. Not eleven that talk to each other.

Every other suite sells you separate products and a sync job between them. Medhava is a single application over one set of records — so there is nothing to synchronise, and nothing to reconcile.

1

Enter it once

A goods receipt, a counter sale, a marketplace order — recorded in one place. Stock, the ledger, the quality record and the supplier scorecard all update in the same instant, because they are reading the same record.

2

Numbers that cannot disagree

One stock figure per SKU. One ledger. One order record. Not a copy per channel that somebody reconciles on Saturday. When the website says four are left, four are left.

3

Built for how India actually runs

GST with input credit on accepted goods, TDS and TCS, seven marketplaces, piece-rate karigar wages — and apps that keep working when the internet does not.

WHAT CHANGES FOR YOU

The same day, before and after

Nothing here is a new way to run your business. It is the work you already do, arranged so that it only has to be done once.

TODAY

- ✗ Log into seven seller panels, one at a time
- ✗ Copy each order into a sheet, then into the books
- ✗ Guess which stock figure is the real one
- ✗ Learn at month-end that a mill over-billed you
- ✗ Chase a marketplace shortfall you spotted six weeks late
- ✗ Ask three people for their file before you can see one number

WITH MEDHAVA

- ✓ One queue, sorted by whichever order is closest to being late
- ✓ The order writes itself into stock and into the ledger
- ✓ There is one stock figure, so there is nothing to choose between
- ✓ An over-billed invoice cannot be paid — the match refuses it
- ✓ Every shortfall is on a screen the day the payout lands
- ✓ Open the dashboard. It was already up to date.

Medhava at a glance

What it is	A unified ERP: 15 modules and 65 apps sharing one data core and one event bus.
Shared data core	Item/SKU · Party · Stock · Ledger & Voucher · Order — every module reads and writes these.
Key difference	Not a suite of integrated apps. One application, so there is no sync step and no duplicate master data.
Compliance	Double-entry accounting with CGST/SGST/IGST, TDS, TCS, ITC on accepted goods, GSTR-1 and GSTR-3B.
Channels	Amazon, Flipkart, Myntra, Meesho, Ajio, Nykaa, JioMart, plus Shopify and WooCommerce.
Security	PostgreSQL row-level security per company; integrations use revocable scoped API keys in an AES-256-GCM vault — never account passwords.
Deployment	Hosted multi-tenant cloud, or single-file offline apps that run by double-clicking with no install.

Your business runs on eleven tools that don't talk

Accounting in one place, stock in a spreadsheet, marketplace orders in seven seller panels, karigar wages in a notebook. Every month-end becomes an archaeology project.

Numbers that disagree

Stock says 40, the marketplace says 12, the books say something else again. Nobody knows which is right, so everyone guesses.

Work entered three times

The same invoice keyed into the seller panel, the spreadsheet and the accounting package. Three chances to be wrong.

Money quietly leaking

Over-billed purchases, unclaimed marketplace shortfalls, RTO losses — invisible until the year is over.

HOW IT WORKS

One data core. One action cascades everywhere.

Every module reads and writes the same five entities. That is the physical reason a single goods receipt can touch stock, books, quality and sourcing at the same instant.

UNIFIED DATA CORE

Item / SKU

Party

Stock

Ledger

Order

→ Inventory · stock in

→ Finance · payable & ITC

→ Quality · debit note

→ Sourcing · risk updated

← Planning · requirements

← Marketplace · order pull

Accepted — not ordered — is what counts

You order 100 metres. 100 arrive. Quality accepts 96. Most systems increase stock by 100 and claim tax credit on 100. Medhava increases stock by **96**, claims input tax credit on **96**, raises a debit note for the 4 rejected, and lowers that mill's accept rate — automatically.

Nothing derived is ever stored

Outstanding, risk, performance, ageing, profit per product — all recomputed on read. They cannot drift out of step with the documents underneath them.

15 modules. 65 apps. One login.

Each module is a complete area of your business. Turn on what you need today — everything else is already wired for the day you need it.

Channels & Storefronts

Labels & Documents

Marketplace OMS

Myntra, Flipkart, Ajio, Amazon, Meesho, Nykaa and JioMart in a single queue — processed all together, channel-wise, or design-wise. The stages the panels really use, with the right cut-off counting down on each order — a quick-commerce or air-shipped order is not due at the same hour as a standard one. Priority orders at the top, and the day grouped by design so a Muskan Purple is picked once for eleven parcels instead of eleven times.

Order Management

One pipeline from new to delivered, whether the order came from a seller panel, your Shopify or WooCommerce site, a dealer or the counter.

Manual Data Check

The order and return sheets you already download from the panels, and the offline registers from the three shops — one file or a whole ZIP — read back as ten cross-checks: net sale after commission and fees, month, design, state, wrong returns, SPF claims, ads, payouts and GST. Every figure clicks through to the transactions behind it.

Reconciliation

Match every marketplace payout to the order line that earned it, and expose the gap.

Claims & Disputes

Weight disputes, SPF shortfalls, parcels lost in transit and returns that came back with a different piece inside — filed as claims with the packing footage attached, and answered before they close. A claim awaiting your reply is money; one closed for no response is nothing, so the days left sit beside the amount.

Returns / RMA

Customer returns, courier returns and wrong returns kept apart — because only one of the three is really your fault, and only one of them turns into dead stock.

Channels & Storefronts

Connect a channel once and it stays in step: catalogue out, price out, stock out, orders in. Seven marketplaces and any website platform — Shopify, WooCommerce, Magento, BigCommerce, Wix or a custom site over its own API — each switchable without touching your data. Shopsy and any other storefront a channel runs alongside its main one counts as its own channel here. Where a channel has no open interface, its own downloaded report is a first-class way in. A channel may also know you by a different trading name — that is a label on the channel, not a second company, so it tags the order and the payout without ever splitting your books.

Labels & Documents

The panel gives you a PDF; this hands the packing table something it can work from. Cropped to 4×6 for every channel, your design code printed large where the panel left it off, the invoice and slip merged behind it, and the whole batch to the label printer in one job. Reprint one parcel without redoing the lot — and no customer's name and address is ever uploaded to an outside website to be cropped.

Warehouse

MODULE 05

3 APPS

Pick the right design first time — and prove what you sent

Bin-level instructions and barcode scanning so the right piece leaves the godown and stock stays honest — and a recording of each parcel being packed, because a wrong-return claim is settled by footage, not by argument.

Packing Video

Picking & Bins

Pick lists in walking order through the godown, by design and size, so nobody crosses the floor twice.

Packing Video

Every parcel filmed as it is packed and indexed by its order number, so when a panel says the wrong piece was sent, the clip goes into the claim.

Barcode Operations

Scan to pick, pack, dispatch and run a physical stock count from a phone — the same scan whether the order came from a marketplace, your Shopify site or the counter.

Logistics

MODULE 06

4 APPS

The courier network — rates, failed deliveries and the COD money

Booking one parcel happens on the order. This module is the network behind it: what Delhivery, Blue Dart and the rest charge to that pin code before you pick one, what happens to a delivery that fails in a small town, and whether the cash collected at the door reached your bank.

- ✓ Handover & Manifest

Rates & Zones

Every courier's rate card by zone, weight slab and service — so the cheapest and the fastest option for this parcel are both known before it is booked.

COD Remittance

What the courier collected at the door against what reached the Surat account, parcel by parcel, with every shortfall named and aged.

NDR & RTO Rescue

A failed delivery worked while it can still be saved — reattempt, call, correct the address — before it becomes a return you pay for twice.

✓ Handover & Manifest

What is expected out today against what the pickup boy actually took, per courier and per service. The manifest to hand him, the one-time code to confirm it, and a signed note of what was left behind — so a parcel lost between the packing table and the van has an owner.

Inventory & Catalog

MODULE 07

2 APPS

One stock number everyone trusts

The most important number in the house: one quantity per design and size, per godown, per stage — greige, dyed, in stitching, finished, listed. Read and written by every other module. And one product record every marketplace lists from.

Size and weight on file

98%

- Stock
- Catalog / PIM

Stock

Live quantity by design, size and location, fabric in metres and pieces in numbers, with reorder alerts, lot tracking, set kits and dead-stock ageing.

Catalog / PIM

One record per design — fabric, work, length, colour, size chart, images, HSN, MRP and what each panel actually sells it at — scored for Myntra and Amazon readiness before it lists. It also carries the two things everything downstream needs: the code each panel knows the design by, mapped to yours, and the packed size and weight that decide the courier rate and settle every weight dispute. Every listing’s state on every panel is here too — live, waiting for approval, blocked, archived — with the quality score that decides whether anyone sees it.

Manufacturing

MODULE 08

BOM & Consumption

Quality Control

Maintenance

PLM & Development

Concept to a design that can actually be made: fabric and trim specification, sample rounds with the mill, costed trials against a target price, and sign-off — every version kept, so last season’s costing is still there.

Production Orders

Cutting, stitching, embroidery, washing, finishing and checking — your own stages, with work-in-progress visible at each and nothing lost at the dyer.

BOM & Consumption

What each design consumes — metres of fabric, zari, lining, buttons, packing — costed at today’s mill rates.

Quality Control

Accept, reject or send for rework, with reasons that feed the mill’s accept rate and the karigar’s record.

Maintenance

Machines and the building: what is due for service, when it was last done, what it cost, and what stopped while it was down.

Purchase

MODULE 09

GSTR-1 lines matched

100%

Vouchers posted automatically

81%

Accounting

Double-entry books where every voucher balances and the trial balance always ties.

Invoicing

GST tax invoices and receipts, worked out from the lines to the paise. Where a panel raises its own invoice you keep both numbers on the order — theirs and your own series — so the panel's paperwork and your books point at the same sale.

Expenses

Spend captured by category with approvals, and bill OCR to save typing.

Finance Reports

P&L, balance sheet, and profit by channel, design and SKU — so you know which anarkali actually earned money after commission, shipping and returns.

GST & Tax

CGST, SGST, IGST, TDS, TCS, input credit, GSTR-1 and GSTR-3B — filed per registration, so a group where one company is registered and another is not files exactly what each one owes and nothing it does not.

📄 Settlement

MODULE 12

3 APPS

Get paid what the panels owe you — cycle by cycle

Matching one payout to one order line happens in OMS. This is the level above: the settlement cycle each panel runs, the commission it actually charged against the rate card it published, and the TCS it deducted in your name.

●●● Settlement cycles · what each panel really paid

DUE THIS CYCLE

Commission charged as published

86%

Claims recovered

63%

- 📅 Payout Cycles
- 📊 Fee & Commission Audit
- 📄 TCS & TDS Register

Payout Cycles

Every settlement cycle each panel runs — what it should pay, what actually landed in the bank, and on which day — so a late payout is visible the day it is late, not at month end.

TCS & TDS Register

Every rupee the panels deducted as TCS, and TDS on job work, matched against the portal's own figures — so the credit you claim is the credit you are owed.

Fee & Commission Audit

The commission a panel publishes for a category against what it actually took, style by style. A quiet rate change is caught the first time it is applied, not at year end — and your seller tier sits on the same screen, because the tier is what the rate card hangs off, and slipping out of one quietly costs more than any single deduction.

📄 Marketing

MODULE 13

5 APPS

Sell more without cutting the price

Plan the festive calendar, run the campaigns, and let rules keep you competitive on the panels without giving the margin away.

Social Calendar

Plan and publish across every channel from one calendar.

Repricing Engine

Rules per panel and per design — floor, ceiling, match-lowest and a festive override — so a Diwali sale does not quietly go below cost. And what each change actually did: a design whose orders fell after a price rise shows as exactly that, next to the rule that raised it.

Blog & Pages

How to drape it, what to wear it to, which fabric for which season — written, scheduled and published to your own site with the meta and internal links already set.

Campaigns

Email, SMS and WhatsApp campaigns measured on real revenue, not opens.

Automation

If this happens, do that — across any module, without writing code.

AI Content Engine

MODULE 14

5 APPS

Write it, shoot it, cut it — from your own catalogue

Listings, ads, reels and product photography generated from your own designs, in a voice that sounds like one person from Surat rather than a template — so the words match the piece and the picture is the size Myntra actually wants.

Content Engine

Fourteen stages in your own voice — buyer psychology, competitor reading, hooks, the product description, marketplace copy for Amazon and Myntra, ad variations, reel scripts, song lyrics for the reel, the calendar, size chart and alt text.

Video Studio

Text and image to video, reels and ad cuts sized for every channel.

Publisher

One push sends the listing, images and copy to the website and every panel, and reports back what went live and what a panel rejected, with the reason.

Image Studio

A phone photo becomes a listing image: layers, free transform, background removal, Myntra 1080×1440 and every other channel preset, watermark and SEO alt text.

Design Studio

Banners, festive creatives and thumbnails — templates, layers, undo and redo, any colour, exact sizing and stock elements, exporting PNG, JPG or PDF at whatever size the panel or the printer asks for.

Projects & Collaboration

MODULE 15

5 APPS

The work that is not an order — and the talking around it

An exhibition in Hyderabad, a boutique's custom order, a new godown fit-out, a legal matter with a supplier. Work that is not a sales order still has a deadline, a cost and documents — and it belongs on the same records as everything else.

Forum

Discuss

Projects & Cases

An exhibition, a custom order for a chain, a fit-out or a dispute — stages you define, owners, deadlines, documents, hours and real cost, all on one record the ledger can see.

Approvals

One queue for everything waiting on a yes: a mill purchase order, a boutique discount, a leave day, a credit note, a payment. The rule that sent it there is next to it, and the decision goes on the record.

Discuss

The conversation attached to the record it is about — this order, this mill bill, this dispute — so a year later the reason for the decision is still sitting beside it.

Timesheets & Planning

Who is on what this week and the hours that actually went in — against a project, an exhibition or a machine — with billable and non-billable kept apart.

Forum

Questions and answers that outlive a chat — for customers, dealers or staff — with the useful ones kept where the next person will actually find them.

Actions carrying a named user

100%

Documents sent out need a one-time code

100%

Ask & Print

At an exhibition in Hyderabad, send one line from your phone: “ledger Kalamandir”, “print slips”. It comes back as a PDF, or it prints at the Surat office — with nothing plugged into your phone and nothing at the office open to the internet.

The controls that pay for the software

Three-way match

A supplier bill only passes when the purchase order, the goods receipt and the invoice agree on price and quantity. Bills that over-charge or over-bill rejected goods are held automatically, with the reason in plain language.

Vendor risk that sees ahead

Risk blends weak performance, spend concentration and overdue bills. Your *best* supplier still flags medium risk when 44% of your buying sits with them — the fact worth knowing before a disruption, not after.

Settlement reconciliation

Import a marketplace settlement, match it to the orders, and see every commission, TCS deduction, weight discrepancy and short payment — with a claim pack ready to file.

Karigar piece-rate

Pooled set completion, per-garment rates, alteration hours and advances roll into each karigar's payout — and into a true cost per piece for every design.

One stock number

One quantity per SKU per location per stage, pushed to every channel. Overselling stops being a monthly apology.

AI studio built in

Listings, ad copy, product photography and reels generated against your own catalogue — not a bolted-on chatbot, but the same data core.

INDUSTRIES

Built on the neutral engine, dressed for this trade

Every screen you are about to read is the same code as the Medhava edition. Only the master data and the words change — which is exactly why a machine shop or a law firm can run it too.

What is different here

Fabric in metres and pieces in numbers on the same item master. Karigar piece-rate with pooled set completion. Design-wise costing to the paise. HSN 5007 / 5208. Wrong-return dead stock treated as the loss it is.

The channels you actually sell on

Myntra, Flipkart, Ajio, Amazon, Meesho, Nykaa and JioMart in one queue, plus the Surat counter, the boutique wholesale book and export to the Gulf — all writing to the same order table.

The people who make it

Cutting, stitching, embroidery, finishing and checking as stages you set. Karigars paid by the piece, staff paid by the month, both in one register and one payout.

The compliance you file

GST on ethnic wear slabs, TCS the marketplaces deduct, TDS on job work, LUT bond and IGST refund on export — all worked out from the same vouchers.

COMPARISON

Medhava vs. a suite of integrated apps

The difference is architectural, not cosmetic.

CAPABILITY	MEDHAVA	TYPICAL SUITE
Architecture	One app, one data core	Many apps, integrated
Master data	Single Item & Party record	Duplicated per app, synced
Stock truth	One number per SKU × location	Per-app, reconciled nightly
Cross-module posting	Instant, via event bus	Scheduled sync jobs
Marketplace settlement	Reconciled to order line + claim pack	Usually a separate tool
Piece-rate manufacturing	Built in	Custom development
AI content & imaging	Native, on your catalogue	Third-party add-on
Offline capability	Single-file apps run offline	Cloud-only

TRUST & SECURITY

Your credentials are never the key

Scoped keys only

Marketplace, bank and courier connections use revocable, scoped API keys held in an AES-256-GCM vault. Medhava never asks for, uses or stores an account password.

Isolation by row

Every record carries a company id and is enforced by PostgreSQL row-level security. Group companies stay separate but consolidate on demand.

Immutable audit

Every posting, price change and permission grant is written to an append-only trail with actor, timestamp and before/after values.

THE GAP

Three categories of software. Nobody sells all three.

You are not short of tools. You are short of one tool that covers all of it — which is why the numbers never agree.

Accounting & ERP suites

Tally · BUSY · Marg · Zoho · Odoo

- ✓ Books, GST, stock, purchase
- ✓ Manufacturing, payroll
- ✗ No marketplace order queue
- ✗ No settlement reconciliation or claims
- ✗ No content, image or video studio

Unicommerce · EliteSecom · SmartHub

- ✓ Panel orders in one queue
- ✓ Inventory sync, settlement
- ✗ No double-entry books, no GST return
- ✗ No manufacturing, purchase or payroll
- ✗ No content, image or video studio

AI content tools

Writing · image · video generators

- ✓ Copy, pictures, reels
- ✗ Knows nothing about your catalogue
- ✗ No orders, no stock, no books
- ✗ Nothing publishes to a channel
- ✗ Nothing reconciles afterwards

Medhava

All three, over one data core

- ✓ Books, GST, stock, purchase, manufacturing, payroll
- ✓ Marketplace and storefront order queue
- ✓ Settlement, claims, returns, packing footage
- ✓ Content, image, design and video studio
- ✓ One record underneath all of it

In an accounting package you will never get a marketplace OMS. In an OMS you will never get your books. In a content tool you will never get either. That is the gap. Medhava is built in it.

THE APPROACH

Built deep, not wide

A long feature list is easy. What is hard is the one control that stops the money leaking — so every module ships with one, and refuses rather than warns.

01

Accepted, not ordered

You order 100. 100 arrive. Quality accepts 96. Most systems raise stock by 100 and claim tax credit on 100. Medhava raises stock by 96, claims credit on 96, raises a debit note for the 4, and lowers that supplier's accept rate. Automatically.

02

The payout, to the order line

Not "the channel paid ₹49.1 lakh". Which order line was short, by how much, against which published commission rate — with the claim pack already assembled and the packing footage attached.

03

Nothing derived is stored

Outstanding, ageing, promise dates, payouts, on-time percentage and risk are recomputed every time you read them. A stored number goes stale the moment the document under it changes. These cannot.

PRICING

Start free. Pay when it runs your business.

The software puts no ceiling on how many companies you run — your plan does, and you move up when you need to. Two of the 15 modules — E-commerce / OMS and the AI Content Engine — are priced on what you actually use, because an order is work and a piece of content is work.

Talk to sales

E-commerce / OMS & AI Content Engine

These two are metered, the way every serious order-management platform prices. You pay for orders that actually shipped and content that was actually produced — not for a seat that sat idle.

E-commerce / OMS

PER ORDER PROCESSED

ORDERS A MONTH	PER ORDER	INCLUDED
Up to 1,000	₹2.50	All channels, settlement, returns
1,001 – 10,000	₹1.80	+ claims desk, packing footage
10,001 – 50,000	₹1.40	+ multi-warehouse routing
Above 50,000	On request	+ dedicated throughput

An order is counted once, when it is dispatched. A cancelled or unshipped order is never billed.

AI Content Engine

PER PIECE PRODUCED

WHAT IS PRODUCED	COUNTS AS	RATE
Channel listing (title, bullets, description)	1 content	₹6
Social post, caption or ad variation	1 content	₹4
Product image · background, resize, preset	1 content	₹3
Reel or video cut, per finished clip	1 content	₹25

Bring your own model key and the rate drops to the platform fee alone — no lock-in, ever.

QUESTIONS

Frequently asked

What is Medhava?

Medhava is a unified ERP made of 15 modules and 65 apps that all read and write one shared data core — Item/SKU, Party, Stock, Ledger and Order. Because the data is shared, a single action such as a goods receipt updates stock, the ledger, quality records and the vendor scorecard at the same time.

How is Medhava different from Zoho or Odoo?

Does Medhava support Indian GST?

Which marketplaces does Medhava connect to?

Can Medhava be used outside textiles?

Is my data safe?

Can I use it without internet?

How long does implementation take?

Stop reconciling. Start running.

See your own numbers inside Medhava. Bring one month of sales, purchases and stock — we will show you what your current tools are hiding.
