Expires by itself

What this is, and what is inside

Send a quote, revise it as the customer haggles, and turn the accepted one into a proforma and then a confirmed order in **one click each, with nothing re-typed**.

A quote expires by itself the day its validity runs out. The expiry is worked out from the date and the validity you chose — it is not a field somebody has to update. So nobody can honour a three-month-old price by accident because "we did quote it".

Every revision is kept. The customer only ever sees the latest; you can always see the first. That is the only way to answer "what did discounting cost us this quarter" — a question almost nobody asks, because almost no system can answer it.

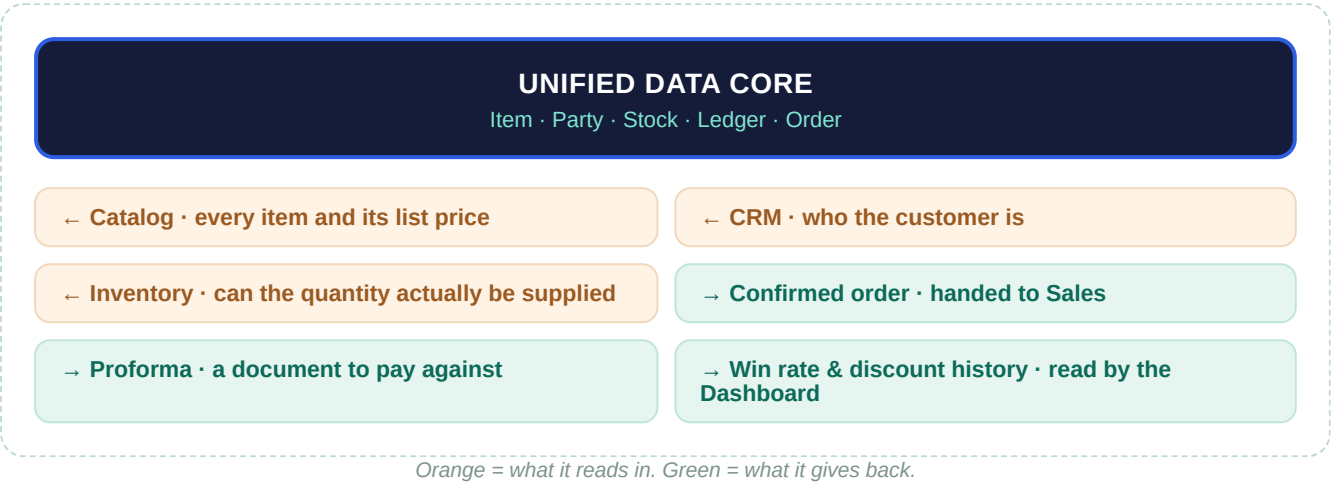

The proforma carries the **same lines, the same discount and the same total** as the quote the customer said yes to. There is no moment where somebody re-keys it and a figure changes.

Where Quotes & Proforma sits

Every Medhava app stands on **one shared Data Core**: Item/SKU, Party, Stock, Ledger/Voucher and Order.

What it reads, and from where

COMES FROM	WHAT IT SUPPLIES
Catalog	Every item and its list price
CRM	Who the customer is and what they have bought before
Inventory	Whether the quantity quoted can actually be supplied
Sales & Orders	Takes the confirmed order once the quote is converted
Accounting	The proforma and then the invoice

What this app owns: the offer, every revision of it, the validity and the expiry. **What it hands over:** a confirmed order — and from that moment the rest of the business takes it.

The process, end to end

Five stages, and the clock only runs on the first two.

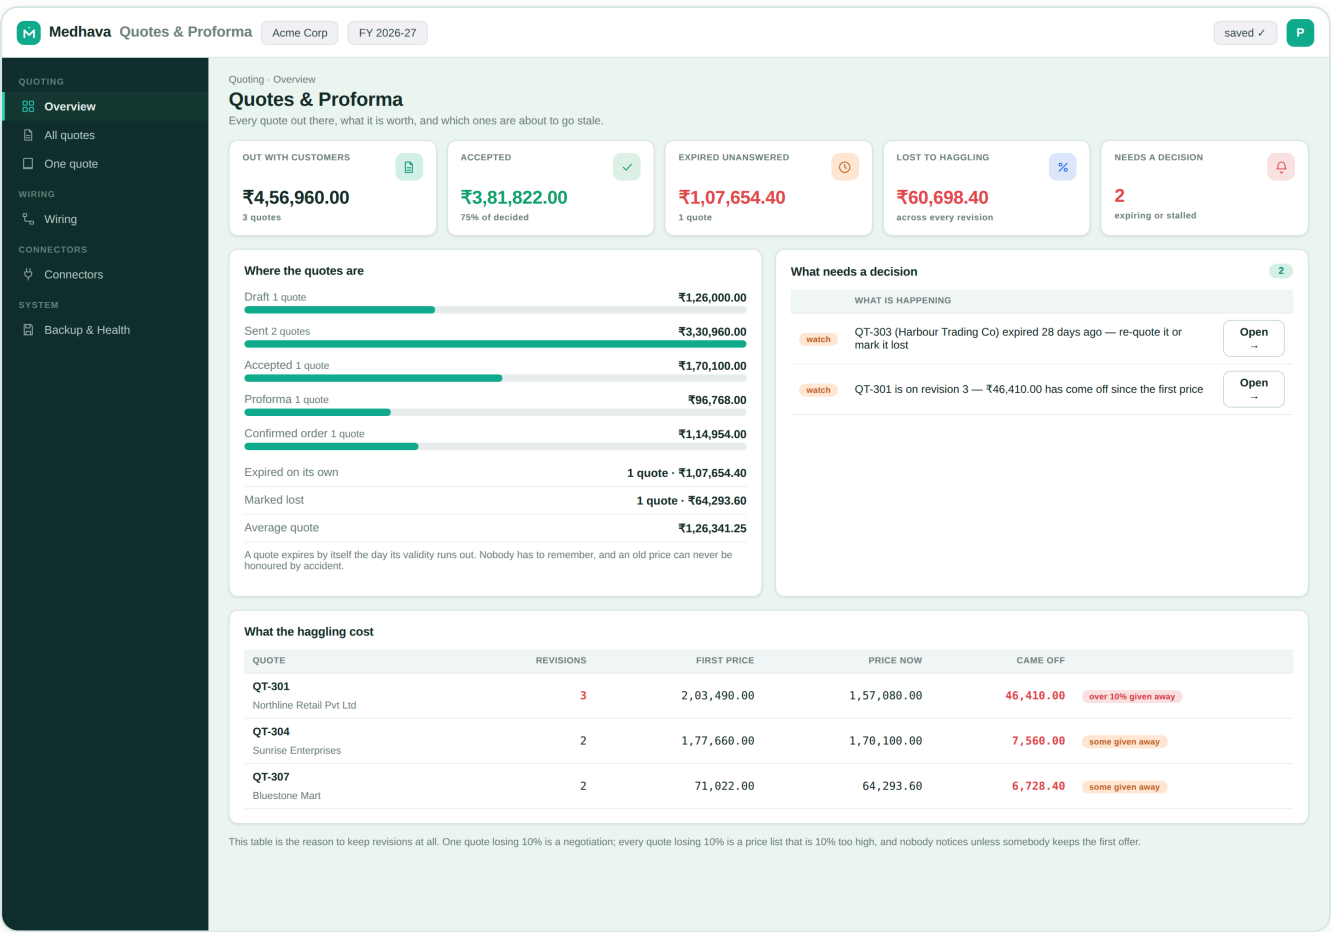

- 1 A quote is raised.** Rates come from the Catalog; the validity is chosen deliberately — 7, 15, 30 or 45 days.
- 2 Sent.** From this moment it is a promise with an expiry date, and the clock runs on its own.
- 3 The customer haggles.** Each revision is kept, so what came off the first price stays visible for ever.
- 4 Accepted.** The expiry stops mattering — the price is now agreed. An accepted quote never expires.
- 5 Proforma, then confirmed order.** Same lines, same total, one click each. Stock is reserved and the books take over.

Two rules that pay for the whole app

- ▶ **The expiry is calculated, never stored.** A field somebody has to update is a field that is wrong within a month. This one is the date plus the validity, worked out fresh every time the screen opens.
- ▶ **An expired quote cannot be advanced.** Press it and the app tells you to re-quote instead. Re-quoting carries the lines over at today's date and marks the old one lost — so the history stays honest.
- ▶ **Every revision is kept, including the first.** Adding a revision never changes an earlier one. There is a self-test for exactly that.
- ▶ **The slippage table is the payoff.** One quote losing 10% is a negotiation. Every quote losing 10% is a price list that is 10% too high — and nobody notices unless somebody keeps the first offer.

Both rules are self-tests: "a quote past its validity reads as expired on its own" and "adding a revision does not change the first one".

Accepted .. Proforma .. Confirmed order is one click each, and nothing is re-typed. The proforma carries the same lines, the same discount and the same total as the quote the customer said yes to.

Every quote with its revision number, a countdown to expiry, and its stage.

The **Expires** column is the one to read. It counts down, turns amber under seven days and red under three, and once it has gone it says *expired N days ago*. Nobody has to maintain it.

Accepted → Proforma → Confirmed order is one click each, and nothing is re-typed. The proforma carries the same lines, the same discount and the same total as the quote the customer said yes to.

Sitting at Draft, with its validity already running.

Rates came from the Catalog. The validity was a deliberate choice from a list — not a free-text field somebody guesses at, and not a company-wide default that fits nobody.

Accepted → Proforma → Confirmed order is one click each, and nothing is re-typed. The proforma carries the same lines, the same discount and the same total as the quote the customer said yes to.

A fresh quote at today's date with the same lines; the old one marked lost.

Why not just extend the old one? Because then the record would say you quoted that price today, which is untrue, and the win-rate and slippage figures would quietly stop meaning anything. Re-quoting keeps both honest.

What is on it, what it totals, and every revision it has been through.

Medhava · Quotes & Proforma — Unified ERP — any industry

9 / 18

A revision saved

The new price is current; the first one is still there, unchanged.

This is the table that answers a question most businesses cannot. "What did discounting cost us this quarter" needs the first offer to still exist. Keep only the latest and the question is unanswerable — so it stops being asked.

Where every figure comes from

Quotes owns the offer and its revisions. The moment one becomes an order, the rest of the business takes over.

Shared Data Core: Item/SKU · Party · Stock · Ledger/Voucher · Order — every module reads and writes these.

Every figure here, and its source

FIGURE HERE	COMES FROM	HOW IT IS WORKED OUT
Item rate on a quote	Catalog	Read from the price list, not typed by whoever raised it
Line total	This app	Quantity × the catalog rate
Discount	This app	A percentage of gross, capped at 50%, kept per revision
GST	This app + tax rules	5% of the value after discount, never on the gross
Quote total	This app	Taxable value + GST, always from the latest revision
Expiry date	This app	The date raised plus the validity chosen. Worked out, never stored or updated
Expired	This app	Any unaccepted quote whose expiry date has passed — decided by the calendar, not by a person
What came off	This app	The first revision's total minus the current one's
Win rate	This app	Accepted + (accepted + lost). Expired quotes are not counted as lost until you say so
Confirmed order	Sales / Orders	The quote leaves this app; stock is reserved and the books take over

Live example — a quote becomes an order

1

A quote is raised. Rates come from the **Catalog**; validity is chosen deliberately.

2

-- **Sent**. From this moment it is a promise with an expiry date, and the clock runs on its own.

3

-- The customer haggles. Each **revision** is kept, so what came off the first price is visible for ever.

4

-- **Accepted**. The expiry stops mattering; the price is now agreed.

5

-- **Proforma**: the same lines, the same total, as a document the customer can pay against.

6

-- **Confirmed order**: it leaves this app and becomes a real order. Stock is reserved and the books take it from there.

Two rules that pay for the whole app

1 · A quote expires by itself.

Nobody has to remember, and nobody can honour a three-month-old price by accident because "we did quote it". The expiry is worked out from the date and the validity you chose — it is not a field somebody has to update.

2 · Every revision is kept.

The customer only sees the latest, but you can always see the first. Without that history, "What did discounting cost us this quarter" is unanswerable — which is why almost nobody asks it.

Both are self-tests:

an out-of-date quote must read as expired, and the first revision must always still be readable.

Re-quoted at today's date ✓

Every figure, its source, and one quote followed from raised to confirmed order.

Every figure, and how it is worked out

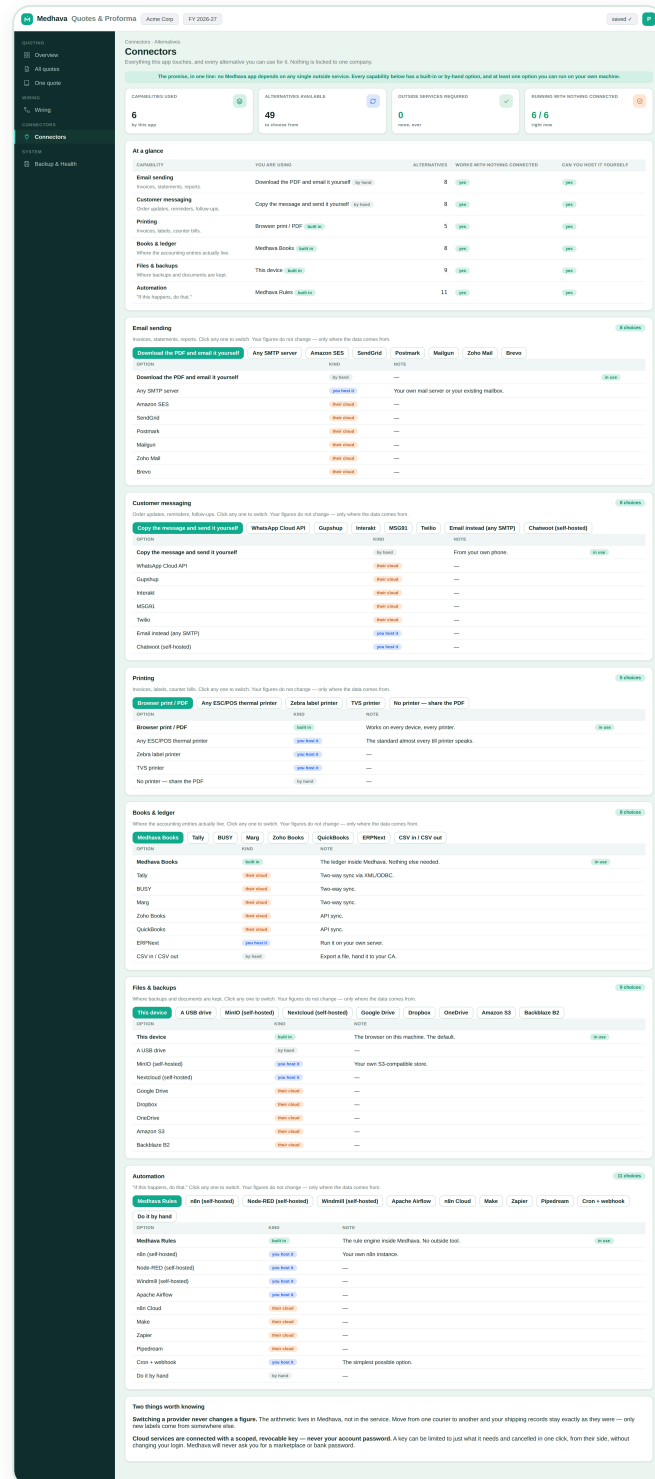

This is the same table as the Wiring screen, so you have it on paper.

FIGURE	COMES FROM	HOW IT IS WORKED OUT
Item rate on a quote	Catalog	Read from the price list, not typed by whoever raised it
Line total	This app	Quantity × the catalog rate
Discount	This app	A percentage of gross, capped at 50%, kept per revision
GST	This app + tax rules	5% of the value after discount, never on the gross
Quote total	This app	Taxable value + GST, always from the latest revision
Expiry date	This app	The date raised plus the validity chosen. Worked out, never stored or updated
Expired	This app	Any unaccepted quote whose expiry date has passed — decided by the calendar, not by a person
What came off	This app	The first revision's total minus the current one's
Win rate	This app	Accepted ÷ (accepted + lost). Expired quotes are not counted as lost until you say so
Confirmed order	Sales / Orders	The quote leaves this app; stock is reserved and the books take over

Every figure is rounded to two decimal places at the moment it is calculated, so a total can never disagree with the rows above it by a stray paisa.

Connectors — nothing is locked to one company

This is the promise, and the app checks it on itself every time it opens: **no Medhava app depends on any single outside service.** Not one accounting package, not one marketplace, not one AI company, not one automation tool, not one courier.

"Outside services required: 0" is not a marketing line — it is one of this app's self-tests.

The three rules the app enforces on itself

- 1 No capability has only one choice.** Every one has at least three; most have eight to twelve.
- 2 Every capability has a built-in or by-hand option** — so the app is fully usable with **nothing connected at all**. No account anywhere, no internet, no subscription. That is how it ships, and it is the default it starts on.
- 3 Every capability has an option you can host yourself** — so you are never forced to send your business data to somebody else's cloud, whatever the fashion of the day is.

All three appear as ordinary self-tests on the **Backup & Health** screen, in plain English, alongside the rest — so you can confirm them yourself in five seconds.

Switching a provider never changes a figure. The arithmetic lives in Medhava, not in the service. Move from one courier to another and every past shipping record stays exactly as it was — only new labels come from somewhere else. There is a self-test for exactly this: *"switching a provider changes nothing else in your data"*.

What the four tags on the screen mean

TAG	WHAT IT MEANS FOR YOU
built in	Ships inside Medhava. Needs nothing, costs nothing, works offline.
you host it	You run it on your own machine or server. Your data never leaves your control.
their cloud	Somebody else's service, connected with a scoped, revocable key.
by hand	A person does it, or a CSV goes in and out. Always available.

Why this rule exists at all. Software that can only work with one outside company is not a tool you own — it is a bet on somebody else staying cheap, staying available and staying in business. Every capability here has a way out, including a way that needs nobody.

What this app can be wired to

Quotes & Proforma uses **6** capabilities and offers **62** alternatives across them. Every one is a button on the Connectors screen — click it and you have switched.

CAPABILITY	THE OPTIONS, IN FULL
Email sending	Download and send it yourself · any SMTP server · Amazon SES · SendGrid · Postmark · Mailgun · Zoho Mail · Brevo
Customer messaging	Copy and send it yourself · WhatsApp Cloud API · Gupshup · Interakt · MSG91 · Twilio · email instead · Chatwoot (self-hosted)
Printing	Browser print / PDF · any ESC/POS thermal printer · Zebra · TVS · no printer at all
Books & ledger	Medhava Books (built in) · Tally · BUSY · Marg · Zoho Books · QuickBooks · ERPNext (self-hosted) · CSV to your CA
Files & backups	This device · a USB drive · MinIO or Nextcloud (self-hosted) · Google Drive · Dropbox · OneDrive · Amazon S3 · Backblaze B2
Automation	Medhava Rules (built in) · n8n · Node-RED · Windmill · Airflow (self-hosted) · n8n Cloud · Make · Zapier · Pipedream · cron + webhook · by hand

Cloud services use a scoped, revocable key — never your password. A key can be limited to only what it needs and cancelled in one click from the service's own side, without touching your login. **Medhava will never ask you for a marketplace, bank or account password.** If any screen ever does, it is not Medhava.

What if the tool you use is not on the list?

Then it becomes one more button. A provider is a small adapter — read from there, write to there — and the app around it does not change, because the arithmetic never lived in the provider. Adding one does not touch a single figure, a single screen or a single self-test.

WHEN A PROVIDER IS ADDED OR SWAPPED	WHAT HAPPENS
Your existing records	Untouched. Nothing is migrated, because nothing was stored in the provider.
Every figure on every screen	Identical — there is a self-test that proves this.
Your saved work and settings	Untouched.
The self-tests	Same list, same names, still passing.
What you have to relearn	Nothing. The screens do not change.

The practical version of the promise: if a service you use doubles its price, changes its terms, or shuts down, you click a different button. You do not change software, you do not re-enter data, and you do not lose a day.

The 34 self-tests, in full (1 of 2)

These run every time the app opens, **before** anything is shown. Menu → **Backup & Health** to see them live. They are written in plain language on purpose — you should be able to read what was checked.

RESULT	WHAT WAS CHECKED
✓ pass	a line total = quantity × rate
✓ pass	the discount comes off before GST
✓ pass	a quote total = taxable + GST
✓ pass	no quote carries a discount over 50%
✓ pass	a discount over 50% would be clamped, not applied
✓ pass	every quote has at least one revision
✓ pass	the current figures come from the latest revision
✓ pass	the first revision is always still readable
✓ pass	what came off = first price – price now
✓ pass	a quote never revised has given nothing away
✓ pass	total slippage counts only revised quotes
✓ pass	adding a revision does not change the first one
✓ pass	the expiry date = the date raised + the validity
✓ pass	a quote past its validity reads as expired on its own
✓ pass	an accepted quote never expires
✓ pass	nothing is both open and expired
✓ pass	"expiring soon" is only quotes with 3 days or less left

The 34 self-tests, in full (2 of 2)

Continued. The last group are the **Connectors** checks — the ones that keep the no-lock-in promise honest.

RESULT	WHAT WAS CHECKED
✓ pass	every quote is in exactly one state
✓ pass	open value counts only draft and sent quotes
✓ pass	win rate = accepted ÷ (accepted + lost)
✓ pass	a lost quote is never counted as won
✓ pass	a converted order is also counted as won
✓ pass	accepting a quote does not change its total
✓ pass	a proforma carries the same total as the accepted quote
✓ pass	a quote that has become an order cannot be marked lost
✓ pass	every capability this app uses is a known one
✓ pass	no capability offers only one choice
✓ pass	every capability works with nothing connected (built-in or by hand)
✓ pass	every capability has an option you can host yourself
✓ pass	exactly one provider is active per capability
✓ pass	the default provider never needs an outside service
✓ pass	no single company is unavoidable across capabilities
✓ pass	switching a provider changes which one is active
✓ pass	switching a provider changes nothing else in your data

If you ever see a red "fail", stop trusting the numbers on screen. Take a backup, reload the file, and report which line failed. Software that tells you when it is broken is worth more than software that is quietly wrong.

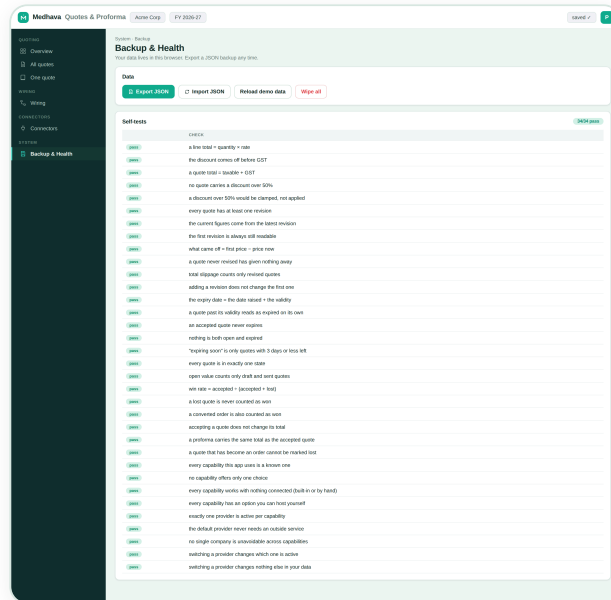

How to run it, and what it will not do

Running it

1. **Windows:** extract the ZIP, then double-click `Quotes_Proforma.html`. It opens in your browser. That is the whole installation.
2. **Mac:** unpack the ZIP, double-click the file. Safari opens it.
3. **Android:** Files app → Downloads → tap the file → open with Chrome. Then ⋮ → **Add to Home screen**.
4. **iPhone / iPad:** Files app → tap the file → Safari. Then Share → **Add to Home Screen**.
5. No internet needed, ever. No account, no licence key, no setup wizard.

Keeping your data safe

Everything you enter lives in your own browser on your own device — nowhere else, and never on anybody's server. That means nobody can see it, and also that clearing your browser's site data would erase it. So: **Backup & Health** → **Export JSON**, once a week. To move to another device, take the file and the backup with you and use **Import JSON**.

Backup & Health — your data controls, and the live test results below them.

What it will not do

- ▶ It does not email the quote itself — it produces it; you send it however you like.
- ▶ It does not negotiate for you, and it will not stop you giving 50% away. It only makes the cost visible.
- ▶ It does not check stock before quoting; a quantity you cannot supply is your judgement, not an arithmetic error.
- ▶ In this single-file form nothing is connected live to email — see the Connectors screen for every option.

Accepted when: the app opens by double-click with no internet · all 34 self-tests show pass · a quote past its validity reads as expired without anybody touching it · an expired quote cannot be advanced but can be re-quoted · a revision is saved without changing the first one · a proforma carries the same total as the accepted quote · a backup exports and imports cleanly.
