# Run the whole ethnic wear house on one system

Mill to marketplace in one application. The metre you bought, the karigar who stitched it, the design that sold on Myntra, the return that came back damaged and the GST on all of it — one record, one stock number, one set of books. Nothing re-keyed between them.

Marketplaces connected

WHAT MEDHAVA IS

## One application. Not eleven that talk to each other.

Every other suite sells you separate products and a sync job between them. Medhava is a single application over one set of records — so there is nothing to synchronise, and nothing to reconcile.

1

### Enter it once

A goods receipt, a counter sale, a marketplace order — recorded in one place. Stock, the ledger, the quality record and the supplier scorecard all update in the same instant, because they are reading the same record.

2

### Numbers that cannot disagree

One stock figure per SKU. One ledger. One order record. Not a copy per channel that somebody reconciles on Saturday. When the website says four are left, four are left.

3

### Built for how India actually runs

GST with input credit on accepted goods, TDS and TCS, seven marketplaces, piece-rate karigar wages — and apps that keep working when the internet does not.

WHAT CHANGES FOR YOU

# The same day, before and after

Nothing here is a new way to run your business. It is the work you already do, arranged so that it only has to be done once.

#### TODAY

- ✗ Log into seven seller panels, one at a time
- ✗ Copy each order into a sheet, then into the books
- ✗ Guess which stock figure is the real one
- ✗ Learn at month-end that a mill over-billed you
- ✗ Chase a marketplace shortfall you spotted six weeks late
- ✗ Ask three people for their file before you can see one number

#### WITH MEDHAHA

- ✓ One queue, sorted by whichever order is closest to being late
- ✓ The order writes itself into stock and into the ledger
- ✓ There is one stock figure, so there is nothing to choose between
- ✓ An over-billed invoice cannot be paid — the match refuses it
- ✓ Every shortfall is on a screen the day the payout lands
- ✓ Open the dashboard. It was already up to date.

### Medhava at a glance

|                  |                                                                                                                                          |
|------------------|------------------------------------------------------------------------------------------------------------------------------------------|
| What it is       | A unified ERP: 20 modules and 98 apps sharing one data core and one event bus.                                                           |
| Shared data core | Item/SKU · Party · Stock · Ledger & Voucher · Order — every module reads and writes these.                                               |
| Key difference   | Not a suite of integrated apps. One application, so there is no sync step and no duplicate master data.                                  |
| Compliance       | Double-entry accounting with CGST/SGST/IGST, TDS, TCS, ITC on accepted goods, GSTR-1 and GSTR-3B.                                        |
| Channels         | Amazon, Flipkart, Myntra, Meesho, Ajio, Nykaa, JioMart, plus Shopify and WooCommerce.                                                    |
| Security         | PostgreSQL row-level security per company; integrations use revocable scoped API keys in an AES-256-GCM vault — never account passwords. |
| Deployment       | Hosted multi-tenant cloud, or single-file offline apps that run by double-clicking with no install.                                      |

## THE PROBLEM

# Your business runs on eleven tools that don't talk

Accounting in one place, stock in a spreadsheet, marketplace orders in seven seller panels, karigar wages in a notebook. Every month-end becomes an archaeology project.

### Numbers that disagree

Stock says 40, the marketplace says 12, the books say something else again. Nobody knows which is right, so everyone guesses.

### Work entered three times

The same invoice keyed into the seller panel, the spreadsheet and the accounting package. Three chances to be wrong.

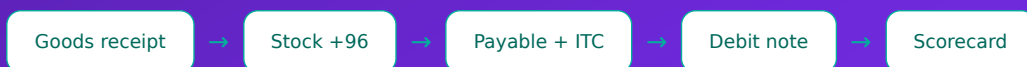

### Money quietly leaking

Over-billed purchases, unclaimed marketplace shortfalls, RTO losses — invisible until the year is over.

## HOW IT WORKS

# One data core. One action cascades everywhere.

Every module reads and writes the same five entities. That is the physical reason a single goods receipt can touch stock, books, quality and sourcing at the same instant.

### UNIFIED DATA CORE

Item / SKU

Party

Stock

Ledger

Order

→ Inventory · stock in

→ Finance · payable & ITC

→ Quality · debit note

→ Sourcing · risk updated

← Planning · requirements

← Marketplace · order pull

### Accepted — not ordered — is what counts

You order 100 metres. 100 arrive. Quality accepts 96. Most systems increase stock by 100 and claim tax credit on 100. Medhava increases stock by **96**, claims input tax credit on **96**, raises a debit note for the 4 rejected, and lowers that mill's accept rate — automatically.

### Nothing derived is ever stored

Outstanding, risk, performance, ageing, profit per product — all recomputed on read. They cannot drift out of step with the documents underneath them.

## WHERE THE BUILD STANDS

# 16 apps working today. 82 still to build.

Nothing on this page is called finished unless it is. Every app further down carries a badge saying which it is, and the counts here are counted from the module list each time this page is built — never typed in.

## The honest count

|                |                                                                                                                      |
|----------------|----------------------------------------------------------------------------------------------------------------------|
| Modules        | 20 business modules, plus the Platform spine underneath them — 21 numbered in build order                            |
| Apps           | 98                                                                                                                   |
| Working today  | 16 — each carries its own self-tests and is checked in a real browser, in both editions                              |
| Still to build | 82 — designed and specified, not yet written                                                                         |
| Build order    | Dependency order: a module is started only once everything it needs already exists                                   |
| Companies      | Vastrangam (invoices VS) · Ethnic Fashion trading as Go4Fashion (invoices EF, SKUs GF) · Adini Couture (invoices AC) |

## THE ONE IDEA

# Every module reads and writes the same six records.

That is the physical reason a single goods receipt can touch stock, the books, quality and sourcing in the same instant — not a promise about integration, a consequence of the design.

## One stock number, not one per channel

The last piece sold at the Surat counter disappears from Myntra and Flipkart in the same instant — not three hours later as a cancellation, because cancellations are what a seller rating is lost to.

## Accepted — not ordered — is what counts

You order 100 metres. 100 arrive. Quality accepts 96. Most systems raise stock by 100 and claim tax credit on 100. This one raises stock by 96, claims input credit on 96, raises a debit note for the 4 rejected, and lowers that mill's accept rate — automatically.

## Nothing derived is ever stored

Outstanding, ageing, risk, promise dates, cost per piece and profit per design are recomputed on read. A stored total can drift away from the documents underneath it; a computed one cannot.

## THE PROOF

# One garment. Eight modules. One database.

The test of whether this is one system or 98 programs sharing a login: sell a single garment and follow it. Every step below is the same record, moving — nothing is re-keyed between them.

## MODULES & APPS

# 20 modules. 98 apps. One login.

Each module is a complete area of your business. Turn on what you need today — everything else is already wired for the day you need it.

- Payment Data Scope

Identity, Settings & Audit

to build

Users, roles and permissions, company switching, tax and numbering setup — and an immutable record of everything that ever happened.

Ask & Print

WORKING TODAY

At an exhibition in Hyderabad, send one line from your phone: “ledger Kalamandir”, “print slips”. It comes back as a PDF, or it prints at the Surat office — with nothing plugged into your phone and nothing at the office open to the internet.

Communications

to build

WhatsApp commands and broadcasts, email and SMS, and the handful of scheduled jobs that carry a nudge to the right person without anyone remembering to send it. Every capability here has more than one interchangeable provider — none of them is ever the source of a figure the business reports.

Data Privacy & Consent

to build

What a person's data may be used for, captured as consent at the point it is given and honoured everywhere downstream — including the right to have it corrected or removed. Retention (how long a record is kept) and deletion (a person's right to have their own data removed) are two different policies, tracked separately, because a rule that keeps records for the law and a request from a person to be forgotten do not resolve the same way.

Payment Data Scope

to build

A written statement of exactly which systems ever see a card or bank credential, and which never do — because every card-capable screen in this system hands that moment to a payment provider's own secured field and never stores or even passes the number through application code. The statement is what an auditor or a partner asks for before they will connect to this system.

Design & Sampling

MODULE 02

2 APPS

# A style exists on paper before it exists as stock

A product moves from a first idea to something the business can actually make and sell — specification, sample rounds, costed trials and sign-off — before it is ever entered as a catalog record. Building this first means Inventory & Catalog never has to invent a style it has no real specification for.

- PLM & Development
- Design / IP Register

PLM & Development

to build

Concept to a design that can actually be made: fabric and trim specification, sample rounds with the mill, costed trials against a target price, and sign-off — every version kept, so last season's costing is still there.

Design / IP Register

to build

What protects a design once it exists — trademark or copyright status, the date it was first shown, and a flag the moment a near-identical listing turns up elsewhere. Every version already kept by PLM & Development gets a filed status here instead of just a date stamp, because a design with no ownership record on file is a design nobody can defend.

Inventory & Catalog

MODULE 03

4 APPS

# One stock number everyone trusts

The most important number in the house: one quantity per design and size, per godown, per stage — greige, dyed, in stitching, finished, listed. Read and written by every other module. And one product record every marketplace lists from.

Design record · one design, every panel's name for it

-  Stock
-  Catalog / PIM
-  Kit & Combo SKU
-  Master-Data Hygiene

### Stock to build

Live quantity by design, size and location, fabric in metres and pieces in numbers, with reorder alerts, lot tracking, set kits and dead-stock ageing.

### Catalog / PIM to build

One record per design — fabric, work, length, colour, size chart, images, HSN, MRP and what each panel actually sells it at — scored for Myntra and Amazon readiness before it lists. It also carries the two things everything downstream needs: the code each panel knows the design by, mapped to yours, and the packed size and weight that decide the courier rate and settle every weight dispute. Every listing's state on every panel is here too — live, waiting for approval, blocked, archived — with the quality score that decides whether anyone sees it.

### Kit & Combo SKU to build

A sellable SKU made of component SKUs — a three-piece set sold as one listing. Selling the kit decrements each component at order time, so stock is right for every piece in the set, not just the set itself.

### Master-Data Hygiene to build

Duplicate detection and merge across customers, vendors and designs, and a dead-stock register for what has not moved in months. Protects every downstream report from the same record existing twice under two names.

CRM

MODULE 04

4 APPS

## Know every boutique, chain and customer completely

One record per party — a Kalamandir or a Rajmandir, a Surat walk-in or a Myntra buyer — carrying every enquiry, order, return, agreement and conversation, whichever channel it arrived on.

CRM & Customer 360

Documents & eSign

Helpdesk & Live Chat

Forms & Feedback (NPS)

### CRM & Customer 360 WORKING TODAY

Enquiry to confirmed order, then the full lifetime: what they bought, what came back, what they are worth and which new range to show them first.

### Documents & eSign WORKING TODAY

Mill agreements, job-work contracts, signed delivery challans, export documents and boutique credit terms filed against the party or order they belong to — found by that record, not by hunting through a folder.

### Helpdesk & Live Chat WORKING TODAY

A boutique asking where its parcel is, or a customer asking about a size — the question becomes a ticket tied to the order, with the whole history already open.

### Forms & Feedback (NPS) to build

A short form after delivery, and the score it produces attached to the design or item it is actually about — not just the buyer — so a complaint-prone item surfaces as a pattern instead of a scatter of individual gripes.

D2C Sales

WORKING TODAY

Orders from your own storefront, cart to dispatch, with loyalty and partial COD on a ₹4,400 anarkali.

B2B & Credit

WORKING TODAY

Boutique and chain orders on credit limits and tier pricing, with outstanding aged against each party's own agreed terms.

Export

WORKING TODAY

Commercial invoice, packing list, LUT bond and IGST-refund tracking for the Gulf and UK buyers.

POS

WORKING TODAY

Counter billing at Udhna that draws on the same stock as the website — no second stock register.

Quotes & Proforma

WORKING TODAY

Send a quote, convert it to a confirmed order in one click.

Couriers & AWB

to build

Book the parcel on the order, compare couriers for that pin code, print the label with the design code on it, and follow the AWB to the door.

Subscriptions

to build

A schedule that raises its own invoice on its cycle and follows up on its own when a payment fails — for anything sold as a standing order rather than a one-off.

Planning & Requirements (MRP)

MODULE 06

3 APPS

# Turn what is selling into what to buy and make

Confirmed orders and demand history have to become a plan before Purchase can buy anything or Manufacturing can start anything — otherwise buying and making are both just guessing. This module sits between the two: it reads what is actually selling and what is already committed, and turns that into requirement, not the other way around.

READS FROM

Sales

E-commerce / OMS

WRITES TO

Purchase

Manufacturing

- Demand Forecast & Signal
- Requirement Explosion (MRP run)
- Open-to-Buy / Budget Ceiling

Demand Forecast & Signal

to build

What sold, by SKU and by period, turned into a short-term forecast — the number every requisition and every production order downstream is measured against instead of a guess.

Requirement Explosion (MRP run)

to build

Confirmed demand exploded through the bill of materials into what raw material to buy and what to produce, and by when — so a purchase requisition or a production order always traces back to real demand, never to a feeling that stock is getting low.

Open-to-Buy / Budget Ceiling

to build

A spending ceiling set per period regardless of what the demand signal suggests, so a real signal cannot on its own commit more money than the business has decided to risk this season. Every requisition the MRP run drafts is checked against what is left of the ceiling before it goes to Purchase.

Purchase

MODULE 07

**Piece-rate & Contractors** to build

Karigars paid by the piece: pooled set completion, per-garment rates, alterations, rework and advances resolved into one payout.

**Maintenance** to build

Machines and the building: what is due for service, when it was last done, what it cost, and what stopped while it was down.

**Quality & Compliance** MODULE 09 2 APPS

# Certify what was received and what was made

Quality inspection used to live buried as one step inside Manufacturing; it stands on its own here because a rejection at goods-receipt and a rejection on the production floor are the same discipline, and because the certificates a business holds — the proof it follows a standard — belong next to the inspections that back them up, not scattered across email.

- ✓

Quality Control
- 📄

Certificate & Compliance Register

✓

Quality Control

to build

Accept, reject or send for rework, with reasons that feed the mill’s accept rate and the karigar’s record.

📄

Certificate & Compliance Register

to build

Every standard the business or a vendor holds — a safety, labour or environmental certification — with its issue date, its expiry, and the audit that backs it, so a certificate about to lapse is visible before a buyer asks for it and finds it already expired. What this register tracks is what a sustainability report downstream is actually built from.

Fleet

📍

Rates & Zones

to build

Every courier's rate card by zone, weight slab and service — so the cheapest and the fastest option for this parcel are both known before it is booked.

📁

COD Remittance

to build

What the courier collected at the door against what reached the Surat account, parcel by parcel, with every shortfall named and aged.

🚚

Fleet

to build

Your own delivery vehicles, if you run any — what each trip cost, what is due for service, and what that adds to freight. Optional; most businesses run couriers only.

↶

NDR & RTO Rescue

to build

A failed delivery worked while it can still be saved — reattempt, call, correct the address — before it becomes a return you pay for twice.

✓

Handover & Manifest

to build

What is expected out today against what the pickup boy actually took, per courier and per service. The manifest to hand him, the one-time code to confirm it, and a signed note of what was left behind — so a parcel lost between the packing table and the van has an owner.

📁

📍

Accounting

to build

Double-entry books where every voucher balances and the trial balance always ties.

📁

Expenses

to build

Spend captured by category with approvals, and bill OCR to save typing.

%

ITC Reconciliation

to build

Every input credit matched against the government's own GSTR-2A/2B before a return is filed, so a credit claimed is a credit that is actually on record.

📄

Invoicing

to build

GST tax invoices and receipts, worked out from the lines to the paise. Where a panel raises its own invoice you keep both numbers on the order — theirs and your own series — so the panel's paperwork and your books point at the same sale.

%

GST & Tax

to build

CGST, SGST, IGST, TDS, TCS, input credit, GSTR-1 and GSTR-3B — filed per registration, so a group where one company is registered and another is not files exactly what each one owes and nothing it does not.

📁

Receivables, Payables & PDC

to build

Payments and receipts allocated against named open invoices, and a register for post-dated cheques that posts only on the date they are realised, not the date they were written.

### Fixed Assets & Depreciation to build

The asset register with both Straight-Line and Written-Down-Value depreciation tracked side by side, and disposal posting its gain or loss straight to the books.

### Year-End Close & Period Lock to build

Profit-and-loss accounts reset and balance-sheet accounts carry forward at year end, and a reviewed period locks against backdated edits until an admin unlocks it — an act that is itself logged.

### Finance Reports to build

P&L, balance sheet, and profit by channel, design and SKU — so you know which anarkali actually earned money after commission, shipping and returns.

## Treasury & Financial Planning MODULE 13 3 APPS

# Know what cash is coming, not just what already arrived

Accounting records what happened; this module is concerned with what happens next — how much cash is actually expected, when, and whether spend against a budget is on track before the month closes and turns the answer into history.

READS FROM

Accounting & GST

Sales

Purchase

WRITES TO

Accounting & GST

Cash Flow Forecast

Banking & Reconciliation

Budget vs Actual

### Cash Flow Forecast to build

Expected receipts and expected payments laid out by week, drawn from open invoices and open bills rather than typed in by hand — so a cash shortfall is visible weeks before the date it would actually bite.

### Budget vs Actual to build

A budget set per category and period, and actual spend from Accounting tracked against it as the period runs — not only after it closes, when the only thing left to do is explain the variance.

### Banking & Reconciliation to build

Bank statement lines matched against the ledger's own record of what should have moved, with anything unmatched surfaced instead of silently carried forward.

## Settlement MODULE 14 3 APPS

# Get paid what the panels owe you — cycle by cycle

Matching one payout to one order line happens in OMS. This is the level above: the settlement cycle each panel runs, the commission it actually charged against the rate card it published, and the TCS it deducted in your name.

Commission charged as published

86%

Claims recovered

63%

### Payout Cycles to build

Every settlement cycle each panel runs — what it should pay, what actually landed in the bank, and on which day — so a late payout is visible the day it is late, not at month end.

### TCS & TDS Register to build

Every rupee the panels deducted as TCS, and TDS on job work, matched against the portal's own figures — so the credit you claim is the credit you are owed.

### Fee & Commission Audit to build

The commission a panel publishes for a category against what it actually took, style by style. A quiet rate change is caught the first time it is applied, not at year end — and your seller tier sits on the same screen, because the tier is what the rate card hangs off, and slipping out of one quietly costs more than any single deduction.

## 🌐 E-commerce / OMS MODULE 15 11 APPS

# Seven panels, one queue — and every rupee accounted for

Stop logging into Myntra, then Flipkart, then Ajio. Every marketplace order lands in one pipeline and your stock goes out to all of them — then the money side closes out in the same module: what the panel paid, what it kept as commission, what came back, and what it still owes you.

AR / Virtual Try-On

### Marketplace OMS WORKING TODAY

Myntra, Flipkart, Ajio, Amazon, Meesho, Nykaa and JioMart in a single queue — processed all together, channel-wise, or design-wise. The stages the panels really use, with the right cut-off counting down on each order — a quick-commerce or air-shipped order is not due at the same hour as a standard one. Priority orders at the top, and the day grouped by design so a Muskan Purple is picked once for eleven parcels instead of eleven times.

### Manual Data Check to build

The order and return sheets you already download from the panels, and the offline registers from the three shops — one file or a whole ZIP — read back as ten cross-checks: net sale after commission and fees, month, design, state, wrong returns, SPF claims, ads, payouts and GST. Every figure clicks through to the transactions behind it.

### Claims & Disputes to build

Weight disputes, SPF shortfalls, parcels lost in transit and returns that came back with a different piece inside — filed as claims with the packing footage attached, and answered before they close. A claim awaiting your reply is money; one closed for no response is nothing, so the days left sit beside the amount.

### Channels & Storefronts to build

Connect a channel once and it stays in step: catalogue out, price out, stock out, orders in. Seven marketplaces and any website platform — Shopify, WooCommerce, Magento, BigCommerce, Wix or a custom site over its own API — each switchable without touching your data. Shopsy and any other storefront a channel runs alongside its main one counts as its own channel here. Where a channel has no open interface, its own downloaded report is a first-class way in. A channel may also know you by a different trading name — that is a label on the channel, not a second company, so it tags the order and the payout without ever splitting your books.

### Order Management WORKING TODAY

One pipeline from new to delivered, whether the order came from a seller panel, your Shopify or WooCommerce site, a dealer or the counter.

### Reconciliation to build

Match every marketplace payout to the order line that earned it, and expose the gap.

### Returns / RMA to build

Customer returns, courier returns and wrong returns kept apart — because only one of the three is really your fault, and only one of them turns into dead stock.

### Labels & Documents to build

The panel gives you a PDF; this hands the packing table something it can work from. Cropped to 4×6 for every channel, your design code printed large where the panel left it off, the invoice and slip merged behind it, and the whole batch to the label printer in one job. Reprint one parcel without redoing the lot — and no customer's name and address is ever uploaded to an outside website to be cropped.

### Listing & Catalog Manager to build

Bulk-create and bulk-edit listings across every channel from the one product record in Inventory & Catalog, and catch the mismatches that quietly cost sales: listed but out of stock, or in stock but never listed.

### AR / Virtual Try-On to build

A way to see drape, fit and colour on a screen before buying, for items where a flat photo alone leaves too much to guess.

### Size / Fit Recommendation AI to build

A fit suggestion at the point of purchase, built from the item's own measurements and the return history of buyers who picked each size — aimed straight at the return reason that costs the most: the right item in the wrong size.

## HR & Payroll MODULE 16 4 APPS

 Markdown / Clearance Optimization

**Social Calendar** to build  
Plan and publish across every channel from one calendar.

**Repricing Engine** to build  
Rules per panel and per design — floor, ceiling, match-lowest and a festive override — so a Diwali sale does not quietly go below cost. And what each change actually did: a design whose orders fell after a price rise shows as exactly that, next to the rule that raised it.

**Blog & Pages** to build  
How to drape it, what to wear it to, which fabric for which season — written, scheduled and published to your own site with the meta and internal links already set.

**Markdown / Clearance Optimization** to build  
The same rule engine that reprices for competitiveness, aimed at ageing stock instead: when to start discounting it and by how much, before it becomes a warehouse write-off rather than a sale at a lower margin.

**Campaigns** to build  
Email, SMS and WhatsApp campaigns measured on real revenue, not opens.

**Automation** to build  
If this happens, do that — across any module, without writing code.

**Events** to build  
Trade shows and exhibitions worked as a channel of their own — booth, budget and every lead captured on the floor landing straight in CRM instead of on a stack of business cards.

 **AI Content Engine** MODULE 18 5 APPS

## Write it, shoot it, cut it — from your own catalogue

Listings, ads, reels and product photography generated from your own designs, in a voice that sounds like one person from Surat rather than a template — so the words match the piece and the picture is the size Myntra actually wants.

 Design Studio

 Publisher

**Content Engine** to build  
Fourteen stages in your own voice — buyer psychology, competitor reading, hooks, the product description, marketplace copy for Amazon and Myntra, ad variations, reel scripts, song lyrics for the reel, the calendar, size chart and alt text.

**Video Studio** to build  
Text and image to video, reels and ad cuts sized for every channel.

**Publisher** to build  
One push sends the listing, images and copy to the website and every panel, and reports back what went live and what a panel rejected, with the reason.

**Image Studio** to build  
A phone photo becomes a listing image: layers, free transform, background removal, Myntra 1080×1440 and every other channel preset, watermark and SEO alt text.

**Design Studio** to build  
Banners, festive creatives and thumbnails — templates, layers, undo and redo, any colour, exact sizing and stock elements, exporting PNG, JPG or PDF at whatever size the panel or the printer asks for.

 **SEO, AEO & AIO** MODULE 19 3 APPS

Be found by a search box,

# an answer box and an AI

Content already exists once this module is reached; here it is made findable — by a traditional search engine, by the answer box above the results, and by the AI assistants now answering shopping questions directly instead of sending someone to a results page.

READS FROM

Inventory & Catalog

AI Content Engine

WRITES TO

Marketing

Technical SEO & Schema

Answer-Engine Optimization

AI-Engine Visibility Tracking

Technical SEO & Schema

to build

Structured data, sitemaps and page-level technical checks against your own storefront and content pages, so a search engine can read what a page is actually about instead of guessing from the text alone.

Answer-Engine Optimization

to build

Content shaped to be quoted directly by an answer box or a voice assistant — a clear, citable answer near the top of the page — rather than written only for a person to scroll through.

AI-Engine Visibility Tracking

to build

Whether and how this business is actually cited when someone asks an AI assistant a shopping question in this category, tracked over time — the same discipline as rank tracking, aimed at a newer kind of result page.

## Projects & Collaboration

MODULE 20

6 APPS

# The work that is not an order — and the talking around it

An exhibition in Hyderabad, a boutique’s custom order, a new godown fit-out, a legal matter with a supplier. Work that is not a sales order still has a deadline, a cost and documents — and it belongs on the same records as everything else.

An exhibition, a custom order for a chain, a fit-out or a dispute — stages you define, owners, deadlines, documents, hours and real cost, all on one record the ledger can see.

Timesheets & Planning

to build

Who is on what this week and the hours that actually went in — against a project, an exhibition or a machine — with billable and non-billable kept apart.

Approvals

to build

One queue for everything waiting on a yes: a mill purchase order, a boutique discount, a leave day, a credit note, a payment. The rule that sent it there is next to it, and the decision goes on the record.

Forum

to build

Questions and answers that outlive a chat — for customers, dealers or staff — with the useful ones kept where the next person will actually find them.

Discuss

to build

The conversation attached to the record it is about — this order, this mill bill, this dispute — so a year later the reason for the decision is still sitting beside it.

Knowledge Base

to build

A searchable internal wiki of standard operating procedures, scoped to the role it applies to, so how a task is meant to be done is written down once instead of carried in one person’s head.

- CEO Dashboard

Report Builder

Group Consolidation

Excel Dashboard Builder

ESG / Sustainability Reporting

CEO Dashboard

WORKING TODAY

Cash, sales by channel, stock by design, profit per piece and the alerts that matter — one screen, refreshed as the day runs.

Report Builder

WORKING TODAY

Drag the fields you want into a report and save it for the whole team.

Group Consolidation

WORKING TODAY

Ethnic Fashion, Vastrangam and Adini Couture as one set of figures, inter-company transfers removed, so the group position is real rather than three spreadsheets added together. Adini Couture has no registration of its own and mainly does job work — it still counts in the group, without being pulled into a return it does not belong in. Add the fourth company the day you open it.

Excel Dashboard Builder

to build

A full workbook — financial summary, HR, purchase, sales, inventory and production, GST, expenses — generated from the live records behind every other screen, with each company shown as its own row and a consolidated row that is a formula over them, never a separately typed total.

ESG / Sustainability Reporting

to build

Water usage, chemical compliance, waste and packaging, reported from the same certificate and audit records Quality & Compliance already keeps — so a sustainability report is a query over evidence already on file, not a separate exercise assembled once a year from scratch.

## HOW IT IS KEPT STRAIGHT

# The rules, the checks, and what we will not claim.

Software that runs a business earns trust by being checkable, not by being described well. These are the standards this build is held to — written down, because a standard nobody wrote down is a standard nobody can be held to.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

✓ Salaries, prices, tax rates and commissions are effective-dated — March payroll uses March's salary

✓ It is not trained, it is built — no model learns from your data

✓ The shipped archive is re-tested after extraction, not just the working copy

✗ 82 apps are designed and specified, not yet written

BUILT DEEP, NOT WIDE

# The controls that pay for the software

## Three-way match

A supplier bill only passes when the purchase order, the goods receipt and the invoice agree on price and quantity. Bills that over-charge or over-bill rejected goods are held automatically, with the reason in plain language.

## Vendor risk that sees ahead

Risk blends weak performance, spend concentration and overdue bills. Your *best* supplier still flags medium risk when 44% of your buying sits with them — the fact worth knowing before a disruption, not after.

## Settlement reconciliation

Import a marketplace settlement, match it to the orders, and see every commission, TCS deduction, weight discrepancy and short payment — with a claim pack ready to file.

## Karigar piece-rate

Pooled set completion, per-garment rates, alteration hours and advances roll into each karigar's payout — and into a true cost per piece for every design.

## One stock number

One quantity per SKU per location per stage, pushed to every channel. Overselling stops being a monthly apology.

## AI studio built in

Listings, ad copy, product photography and reels generated against your own catalogue — not a bolted-on chatbot, but the same data core.

INDUSTRIES

# Built on the neutral engine, dressed for this trade

Every screen you are about to read is the same code as the Medhava edition. Only the master data and the words change — which is exactly why a machine shop or a law firm can run it too.

What is different here

Fabric in metres and pieces in numbers on the same item master. Karigar piece-rate with pooled set completion. Design-wise costing to the paise. HSN 5007 / 5208. Wrong-return dead stock treated as the loss it is.

The channels you actually sell on

Myntra, Flipkart, Ajio, Amazon, Meesho, Nykaa and JioMart in one queue, plus the Surat counter, the boutique wholesale book and export to the Gulf — all writing to the same order table.

The people who make it

Cutting, stitching, embroidery, finishing and checking as stages you set. Karigars paid by the piece, staff paid by the month, both in one register and one payout.

The compliance you file

GST on ethnic wear slabs, TCS the marketplaces deduct, TDS on job work, LUT bond and IGST refund on export — all worked out from the same vouchers.

COMPARISON

Medhava vs. a suite of integrated apps

The difference is architectural, not cosmetic.

| CAPABILITY               | MEDHAVA                               | TYPICAL SUITE               |
|--------------------------|---------------------------------------|-----------------------------|
| Architecture             | One app, one data core                | Many apps, integrated       |
| Master data              | Single Item & Party record            | Duplicated per app, synced  |
| Stock truth              | One number per SKU × location         | Per-app, reconciled nightly |
| Cross-module posting     | Instant, via event bus                | Scheduled sync jobs         |
| Marketplace settlement   | Reconciled to order line + claim pack | Usually a separate tool     |
| Piece-rate manufacturing | Built in                              | Custom development          |
| AI content & imaging     | Native, on your catalogue             | Third-party add-on          |
| Offline capability       | Single-file apps run offline          | Cloud-only                  |

TRUST & SECURITY

# Your credentials are never the key

## Scoped keys only

Marketplace, bank and courier connections use revocable, scoped API keys held in an AES-256-GCM vault. Medhava never asks for, uses or stores an account password.

## Isolation by row

Every record carries a company id and is enforced by PostgreSQL row-level security. Group companies stay separate but consolidate on demand.

## Immutable audit

Every posting, price change and permission grant is written to an append-only trail with actor, timestamp and before/after values.

### THE GAP

## Three categories of software. Nobody sells all three.

You are not short of tools. You are short of one tool that covers all of it — which is why the numbers never agree.

### Accounting & ERP suites

Tally · BUSY · Marg · Zoho · Odoo

- ✓ Books, GST, stock, purchase
- ✓ Manufacturing, payroll
- ✗ No marketplace order queue
- ✗ No settlement reconciliation or claims
- ✗ No content, image or video studio

### Marketplace OMS platforms

Unicommerce · EliteSecom · SmartHub

- ✓ Panel orders in one queue
- ✓ Inventory sync, settlement
- ✗ No double-entry books, no GST return
- ✗ No manufacturing, purchase or payroll
- ✗ No content, image or video studio

### AI content tools

Writing · image · video generators

- ✓ Copy, pictures, reels
- ✗ Knows nothing about your catalogue
- ✗ No orders, no stock, no books
- ✗ Nothing publishes to a channel
- ✗ Nothing reconciles afterwards

### Medhava

All three, over one data core

- ✓ Books, GST, stock, purchase, manufacturing, payroll
- ✓ Marketplace and storefront order queue
- ✓ Settlement, claims, returns, packing footage
- ✓ Content, image, design and video studio
- ✓ One record underneath all of it

In an accounting package you will never get a marketplace OMS. In an OMS you will never get your books. In a content tool you will never get either. That is the gap. Medhava is built in it.

### THE APPROACH

## Built deep, not wide

A long feature list is easy. What is hard is the one control that stops the money leaking — so every module ships with one, and refuses rather than warns.

01

### Accepted, not ordered

You order 100. 100 arrive. Quality accepts 96. Most systems raise stock by 100 and claim tax credit on 100. Medhava raises stock by 96, claims credit on 96, raises a debit note for the 4, and lowers that supplier's accept rate. Automatically.

02

### The payout, to the order line

Not "the channel paid ₹49.1 lakh". Which order line was short, by how much, against which published commission rate — with the claim pack already assembled and the packing footage attached.

03

### Nothing derived is stored

Outstanding, ageing, promise dates, payouts, on-time percentage and risk are recomputed every time you read them. A stored number goes stale the moment the document under it changes. These cannot.

#### PRICING

## Start free. Pay when it runs your business.

The software puts no ceiling on how many companies you run — your plan does, and you move up when you need to. Two of the 20 modules — E-commerce / OMS and the AI Content Engine — are priced on what you actually use, because an order is work and a piece of content is work.

Yearly

SAVE 33%

### E-commerce / OMS & AI Content Engine

These two are metered, the way every serious order-management platform prices. You pay for orders that actually shipped and content that was actually produced — not for a seat that sat idle.

E-commerce / OMS

AI Content Engine

#### PER ORDER PROCESSED

| ORDERS A MONTH  | PER ORDER  | INCLUDED                          |
|-----------------|------------|-----------------------------------|
| Up to 1,000     | ₹2.50      | All channels, settlement, returns |
| 1,001 – 10,000  | ₹1.80      | + claims desk, packing footage    |
| 10,001 – 50,000 | ₹1.40      | + multi-warehouse routing         |
| Above 50,000    | On request | + dedicated throughput            |

An order is counted once, when it is dispatched. A cancelled or unshipped order is never billed.

#### PER PIECE PRODUCED

| WHAT IS PRODUCED                              | COUNTS AS | RATE |
|-----------------------------------------------|-----------|------|
| Channel listing (title, bullets, description) | 1 content | ₹6   |
| Social post, caption or ad variation          | 1 content | ₹4   |
| Product image · background, resize, preset    | 1 content | ₹3   |
| Reel or video cut, per finished clip          | 1 content | ₹25  |

Bring your own model key and the rate drops to the platform fee alone — no lock-in, ever.

#### REQUEST A DEMO

## Bring one month of your own data

Sales, purchases and stock for a single month. In forty minutes you will see what your current tools are hiding — the short payouts, the returns nobody costed, the stock that two systems disagree about.

- ✓ No obligation and no card details
- ✓ Your data stays yours — we work on a copy and delete it after
- ✓ You leave with the numbers, whether or not you buy

We reply within one working day. Medhava will never ask you for a marketplace, bank or account password.

#### QUESTIONS

## Frequently asked

What is Medhava?

Medhava is a unified ERP made of 20 modules and 98 apps that all read and write one shared data core — Item/SKU, Party, Stock, Ledger and Order. Because the data is shared, a single action such as a goods receipt updates stock, the ledger, quality records and the vendor scorecard at the same time.

How is Medhava different from Zoho or Odoo?

Does Medhava support Indian GST?

Which marketplaces does Medhava connect to?

Can Medhava be used outside textiles?

Is my data safe?

Can I use it without internet?

How long does implementation take?

# Stop reconciling. Start running.

See your own numbers inside Medhava. Bring one month of sales, purchases and stock — we will show you what your current tools are hiding.

# Run the whole ethnic wear house on one system

Mill to marketplace in one application. The metre you bought, the karigar who stitched it, the design that sold on Myntra, the return that came back damaged and the GST on all of it — one record, one stock number, one set of books. Nothing re-keyed between them.

Start free for 30 days

- ✓ Works with the internet off
- ✓ GST, TDS & TCS ready

20

Modules, one login

98

Apps over one data core

1

Stock number for every SKU

7

Marketplaces connected

WHAT MEDHAVA IS

## One application. Not eleven that talk to each other.

Every other suite sells you separate products and a sync job between them. Medhava is a single application over one set of records — so there is nothing to synchronise, and nothing to reconcile.

1

## Enter it once

A goods receipt, a counter sale, a marketplace order — recorded in one place. Stock, the ledger, the quality record and the supplier scorecard all update in the same instant, because they are reading the same record.

2

## Numbers that cannot disagree

One stock figure per SKU. One ledger. One order record. Not a copy per channel that somebody reconciles on Saturday. When the website says four are left, four are left.

3

## Built for how India actually runs

GST with input credit on accepted goods, TDS and TCS, seven marketplaces, piece-rate karigar wages — and apps that keep working when the internet does not.

WHAT CHANGES FOR YOU

# The same day, before and after

Nothing here is a new way to run your business. It is the work you already do, arranged so that it only has to be done once.

### TODAY

- ✗ Log into seven seller panels, one at a time
- ✗ Copy each order into a sheet, then into the books
- ✗ Guess which stock figure is the real one
- ✗ Learn at month-end that a mill over-billed you
- ✗ Chase a marketplace shortfall you spotted six weeks late
- ✗ Ask three people for their file before you can see one number

### WITH MEDHAVA

- ✓ One queue, sorted by whichever order is closest to being late
- ✓ The order writes itself into stock and into the ledger
- ✓ There is one stock figure, so there is nothing to choose between
- ✓ An over-billed invoice cannot be paid — the match refuses it
- ✓ Every shortfall is on a screen the day the payout lands
- ✓ Open the dashboard. It was already up to date.

## Medhava at a glance

|                  |                                                                                                                                          |
|------------------|------------------------------------------------------------------------------------------------------------------------------------------|
| What it is       | A unified ERP: 20 modules and 98 apps sharing one data core and one event bus.                                                           |
| Shared data core | Item/SKU · Party · Stock · Ledger & Voucher · Order — every module reads and writes these.                                               |
| Key difference   | Not a suite of integrated apps. One application, so there is no sync step and no duplicate master data.                                  |
| Compliance       | Double-entry accounting with CGST/SGST/IGST, TDS, TCS, ITC on accepted goods, GSTR-1 and GSTR-3B.                                        |
| Channels         | Amazon, Flipkart, Myntra, Meesho, Ajio, Nykaa, JioMart, plus Shopify and WooCommerce.                                                    |
| Security         | PostgreSQL row-level security per company; integrations use revocable scoped API keys in an AES-256-GCM vault — never account passwords. |
| Deployment       | Hosted multi-tenant cloud, or single-file offline apps that run by double-clicking with no install.                                      |

## THE PROBLEM

# Your business runs on eleven tools that don't talk

Accounting in one place, stock in a spreadsheet, marketplace orders in seven seller panels, karigar wages in a notebook. Every month-end becomes an archaeology project.

### Numbers that disagree

Stock says 40, the marketplace says 12, the books say something else again. Nobody knows which is right, so everyone guesses.

### Work entered three times

The same invoice keyed into the seller panel, the spreadsheet and the accounting package. Three chances to be wrong.

### Money quietly leaking

Over-billed purchases, unclaimed marketplace shortfalls, RTO losses — invisible until the year is over.

## HOW IT WORKS

# One data core. One action cascades everywhere.

Every module reads and writes the same five entities. That is the physical reason a single goods receipt can touch stock, books, quality and sourcing at the same instant.

### UNIFIED DATA CORE

Item / SKU

Party

Stock

Ledger

Order

→ Inventory · stock in

→ Finance · payable & ITC

→ Quality · debit note

→ Sourcing · risk updated

← Planning · requirements

← Marketplace · order pull

### Accepted — not ordered — is what counts

You order 100 metres. 100 arrive. Quality accepts 96. Most systems increase stock by 100 and claim tax credit on 100. Medhava increases stock by **96**, claims input tax credit on **96**, raises a debit note for the 4 rejected, and lowers that mill's accept rate — automatically.

### Nothing derived is ever stored

Outstanding, risk, performance, ageing, profit per product — all recomputed on read. They cannot drift out of step with the documents underneath them.

# 16 apps working today. 82 still to build.

Nothing on this page is called finished unless it is. Every app further down carries a badge saying which it is, and the counts here are counted from the module list each time this page is built — never typed in.

## The honest count

|                |                                                                                                                      |
|----------------|----------------------------------------------------------------------------------------------------------------------|
| Modules        | 20 business modules, plus the Platform spine underneath them — 21 numbered in build order                            |
| Apps           | 98                                                                                                                   |
| Working today  | 16 — each carries its own self-tests and is checked in a real browser, in both editions                              |
| Still to build | 82 — designed and specified, not yet written                                                                         |
| Build order    | Dependency order: a module is started only once everything it needs already exists                                   |
| Companies      | Vastrangam (invoices VS) · Ethnic Fashion trading as Go4Fashion (invoices EF, SKUs GF) · Adini Couture (invoices AC) |

## THE ONE IDEA

# Every module reads and writes the same six records.

That is the physical reason a single goods receipt can touch stock, the books, quality and sourcing in the same instant — not a promise about integration, a consequence of the design.

## One stock number, not one per channel

The last piece sold at the Surat counter disappears from Myntra and Flipkart in the same instant — not three hours later as a cancellation, because cancellations are what a seller rating is lost to.

## Accepted — not ordered — is what counts

You order 100 metres. 100 arrive. Quality accepts 96. Most systems raise stock by 100 and claim tax credit on 100. This one raises stock by 96, claims input credit on 96, raises a debit note for the 4 rejected, and lowers that mill's accept rate — automatically.

## Nothing derived is ever stored

Outstanding, ageing, risk, promise dates, cost per piece and profit per design are recomputed on read. A stored total can drift away from the documents underneath it; a computed one cannot.

- Identity, Settings & Audit
- Ask & Print
- Communications
- Data Privacy & Consent
- Payment Data Scope

Identity, Settings & Auditto build

Users, roles and permissions, company switching, tax and numbering setup — and an immutable record of everything that ever happened.

Communications to build

WhatsApp commands and broadcasts, email and SMS, and the handful of scheduled jobs that carry a nudge to the right person without anyone remembering to send it. Every capability here has more than one interchangeable provider — none of them is ever the source of a figure the business reports.

Payment Data Scope to build

A written statement of exactly which systems ever see a card or bank credential, and which never do — because every card-capable screen in this system hands that moment to a payment provider’s own secured field and never stores or even passes the number through application code. The statement is what an auditor or a partner asks for before they will connect to this system.

Ask & PrintWORKING TODAY

At an exhibition in Hyderabad, send one line from your phone: “ledger Kalamandir”, “print slips”. It comes back as a PDF, or it prints at the Surat office — with nothing plugged into your phone and nothing at the office open to the internet.

Data Privacy & Consent to build

What a person’s data may be used for, captured as consent at the point it is given and honoured everywhere downstream — including the right to have it corrected or removed. Retention (how long a record is kept) and deletion (a person’s right to have their own data removed) are two different policies, tracked separately, because a rule that keeps records for the law and a request from a person to be forgotten do not resolve the same way.

Design & Sampling

MODULE 02

2 APPS

# A style exists on paper before it exists as stock

A product moves from a first idea to something the business can actually make and sell — specification, sample rounds, costed trials and sign-off — before it is ever entered as a catalog record. Building this first means Inventory & Catalog never has to invent a style it has no real specification for.

- PLM & Development
- Design / IP Register

PLM & Developmentto build

Concept to a design that can actually be made: fabric and trim specification, sample rounds with the mill, costed trials against a target price, and sign-off — every version kept, so last season’s costing is still there.

Design / IP Register to build

What protects a design once it exists — trademark or copyright status, the date it was first shown, and a flag the moment a near-identical listing turns up elsewhere. Every version already kept by PLM & Development gets a filed status here instead of just a date stamp, because a design with no ownership record on file is a design nobody can defend.

Inventory & Catalog

MODULE 03

4 APPS

# One stock number everyone trusts

The most important number in the house: one quantity per design and size, per godown, per stage — greige, dyed, in stitching, finished, listed. Read and written by every other module. And one product record every marketplace lists from.

Design record · one design, every panel’s name for it

Stock

Catalog / PIM

Kit & Combo SKU

Master-Data Hygiene

Stock

to build

Live quantity by design, size and location, fabric in metres and pieces in numbers, with reorder alerts, lot tracking, set kits and dead-stock ageing.

Catalog / PIM

to build

One record per design — fabric, work, length, colour, size chart, images, HSN, MRP and what each panel actually sells it at — scored for Myntra and Amazon readiness before it lists. It also carries the two things everything downstream needs: the code each panel knows the design by, mapped to yours, and the packed size and weight that decide the courier rate and settle every weight dispute. Every listing’s state on every panel is here too — live, waiting for approval, blocked, archived — with the quality score that decides whether anyone sees it.

Kit & Combo SKU

to build

A sellable SKU made of component SKUs — a three-piece set sold as one listing. Selling the kit decrements each component at order time, so stock is right for every piece in the set, not just the set itself.

Master-Data Hygiene

to build

Duplicate detection and merge across customers, vendors and designs, and a dead-stock register for what has not moved in months. Protects every downstream report from the same record existing twice under two names.

CRM

MODULE 04

4 APPS

# Know every boutique, chain and customer completely

One record per party — a Kalamandir or a Rajmandir, a Surat walk-in or a Myntra buyer — carrying every enquiry, order, return, agreement and conversation, whichever channel it arrived on.

Forms & Feedback (NPS)

CRM & Customer 360

WORKING TODAY

Enquiry to confirmed order, then the full lifetime: what they bought, what came back, what they are worth and which new range to show them first.

Documents & eSign

WORKING TODAY

Mill agreements, job-work contracts, signed delivery challans, export documents and boutique credit terms filed against the party or order they belong to — found by that record, not by hunting through a folder.

Helpdesk & Live Chat

WORKING TODAY

A boutique asking where its parcel is, or a customer asking about a size — the question becomes a ticket tied to the order, with the whole history already open.

Forms & Feedback (NPS)

to build

A short form after delivery, and the score it produces attached to the design or item it is actually about — not just the buyer — so a complaint-prone item surfaces as a pattern instead of a scatter of individual gripes.

Sales

MODULE 05

7 APPS

# Counter, wholesale, website and export — one order book

The Surat counter, the boutique wholesale book, the website and the export shipment all write to the same order and draw on the same stock number. And the parcel is followed to the door, because a sale is not done until the COD money is in.

Orders from your own storefront, cart to dispatch, with loyalty and partial COD on a ₹4,400 anarkali.

B2B & Credit

WORKING TODAY

Boutique and chain orders on credit limits and tier pricing, with outstanding aged against each party's own agreed terms.

Export

WORKING TODAY

Commercial invoice, packing list, LUT bond and IGST-refund tracking for the Gulf and UK buyers.

POS

WORKING TODAY

Counter billing at Udhna that draws on the same stock as the website — no second stock register.

Quotes & Proforma

WORKING TODAY

Send a quote, convert it to a confirmed order in one click.

Couriers & AWB

to build

Book the parcel on the order, compare couriers for that pin code, print the label with the design code on it, and follow the AWB to the door.

Subscriptions

to build

A schedule that raises its own invoice on its cycle and follows up on its own when a payment fails — for anything sold as a standing order rather than a one-off.

🔄 Planning & Requirements (MRP)

MODULE 06

3 APPS

# Turn what is selling into what to buy and make

Confirmed orders and demand history have to become a plan before Purchase can buy anything or Manufacturing can start anything — otherwise buying and making are both just guessing. This module sits between the two: it reads what is actually selling and what is already committed, and turns that into requirement, not the other way around.

Sales

E-commerce / OMS

Inventory & Catalog

WRITES TO

Purchase

Manufacturing

- Demand Forecast & Signal
- Requirement Explosion (MRP run)
- Open-to-Buy / Budget Ceiling

Demand Forecast & Signal

to build

What sold, by SKU and by period, turned into a short-term forecast — the number every requisition and every production order downstream is measured against instead of a guess.

Requirement Explosion (MRP run)

to build

Confirmed demand exploded through the bill of materials into what raw material to buy and what to produce, and by when — so a purchase requisition or a production order always traces back to real demand, never to a feeling that stock is getting low.

Open-to-Buy / Budget Ceiling

to build

A spending ceiling set per period regardless of what the demand signal suggests, so a real signal cannot on its own commit more money than the business has decided to risk this season. Every requisition the MRP run drafts is checked against what is left of the ceiling before it goes to Purchase.

🛒 Purchase

Piece-rate & Contractors

to build

Karigars paid by the piece: pooled set completion, per-garment rates, alterations, rework and advances resolved into one payout.

Maintenance

to build

Machines and the building: what is due for service, when it was last done, what it cost, and what stopped while it was down.

Quality & Compliance

MODULE 09

2 APPS

# Certify what was received and what was made

Quality inspection used to live buried as one step inside Manufacturing; it stands on its own here because a rejection at goods-receipt and a rejection on the production floor are the same discipline, and because the certificates a business holds — the proof it follows a standard — belong next to the inspections that back them up, not scattered across email.

📦

Picking & Bins

to build

Pick lists in walking order through the godown, by design and size, so nobody crosses the floor twice.

📄

Barcode Operations

to build

Scan to pick, pack, dispatch and run a physical stock count from a phone — the same scan whether the order came from a marketplace, your Shopify site or the counter.

📺

Packing Video

to build

Every parcel filmed as it is packed and indexed by its order number, so when a panel says the wrong piece was sent, the clip goes into the claim.

🚚

Logistics

MODULE 11

5 APPS

## The courier network — rates, failed deliveries and the COD money

Booking one parcel happens on the order. This module is the network behind it: what Delhivery, Blue Dart and the rest charge to that pin code before you pick one, what happens to a delivery that fails in a small town, and whether the cash collected at the door reached your bank.

Fleet

✚

Rates & Zones

to build

Every courier's rate card by zone, weight slab and service — so the cheapest and the fastest option for this parcel are both known before it is booked.

📁

COD Remittance

to build

What the courier collected at the door against what reached the Surat account, parcel by parcel, with every shortfall named and aged.

🚚

Fleet

to build

Your own delivery vehicles, if you run any — what each trip cost, what is due for service, and what that adds to freight. Optional; most businesses run couriers only.

↶

NDR & RTO Rescue

to build

A failed delivery worked while it can still be saved — reattempt, call, correct the address — before it becomes a return you pay for twice.

✓

Handover & Manifest

to build

What is expected out today against what the pickup boy actually took, per courier and per service. The manifest to hand him, the one-time code to confirm it, and a signed note of what was left behind — so a parcel lost between the packing table and the van has an owner.

Finance Reports

✚

Accounting

to build

Double-entry books where every voucher balances and the trial balance always ties.

📁

Expenses

to build

Spend captured by category with approvals, and bill OCR to save typing.

%

ITC Reconciliation

to build

Every input credit matched against the government's own GSTR-2A/2B before a return is filed, so a credit claimed is a credit that is actually on record.

📁

Invoicing

to build

GST tax invoices and receipts, worked out from the lines to the paise. Where a panel raises its own invoice you keep both numbers on the order — theirs and your own series — so the panel's paperwork and your books point at the same sale.

%

GST & Tax

to build

CGST, SGST, IGST, TDS, TCS, input credit, GSTR-1 and GSTR-3B — filed per registration, so a group where one company is registered and another is not files exactly what each one owes and nothing it does not.

📁

Receivables, Payables & PDC

to build

Payments and receipts allocated against named open invoices, and a register for post-dated cheques that posts only on the date they are realised, not the date they were written.

### Fixed Assets & Depreciation to build

The asset register with both Straight-Line and Written-Down-Value depreciation tracked side by side, and disposal posting its gain or loss straight to the books.

### Year-End Close & Period Lock to build

Profit-and-loss accounts reset and balance-sheet accounts carry forward at year end, and a reviewed period locks against backdated edits until an admin unlocks it — an act that is itself logged.

### Finance Reports to build

P&L, balance sheet, and profit by channel, design and SKU — so you know which anarkali actually earned money after commission, shipping and returns.

## Treasury & Financial Planning

MODULE 13

3 APPS

# Know what cash is coming, not just what already arrived

Accounting records what happened; this module is concerned with what happens next — how much cash is actually expected, when, and whether spend against a budget is on track before the month closes and turns the answer into history.

READS FROM

Accounting & GST

Sales

Purchase

WRITES TO

Accounting & GST

Cash Flow Forecast

Banking & Reconciliation

Budget vs Actual

### Cash Flow Forecast to build

Expected receipts and expected payments laid out by week, drawn from open invoices and open bills rather than typed in by hand — so a cash shortfall is visible weeks before the date it would actually bite.

### Banking & Reconciliation to build

Bank statement lines matched against the ledger's own record of what should have moved, with anything unmatched surfaced instead of silently carried forward.

### Budget vs Actual to build

A budget set per category and period, and actual spend from Accounting tracked against it as the period runs — not only after it closes, when the only thing left to do is explain the variance.

## Settlement

MODULE 14

3 APPS

# Get paid what the panels owe you — cycle by cycle

Matching one payout to one order line happens in OMS. This is the level above: the settlement cycle each panel runs, the commission it actually charged against the rate card it published, and the TCS it deducted in your name.

Commission charged as published

86%

Claims recovered

63%

Payout Cycles

to build

Every settlement cycle each panel runs — what it should pay, what actually landed in the bank, and on which day — so a late payout is visible the day it is late, not at month end.

TCS & TDS Register

to build

Every rupee the panels deducted as TCS, and TDS on job work, matched against the portal’s own figures — so the credit you claim is the credit you are owed.

Fee & Commission Audit

to build

The commission a panel publishes for a category against what it actually took, style by style. A quiet rate change is caught the first time it is applied, not at year end — and your seller tier sits on the same screen, because the tier is what the rate card hangs off, and slipping out of one quietly costs more than any single deduction.

E-commerce / OMS

MODULE 15

11 APPS

# Seven panels, one queue — and every rupee accounted for

Stop logging into Myntra, then Flipkart, then Ajio. Every marketplace order lands in one pipeline and your stock goes out to all of them — then the money side closes out in the same module: what the panel paid, what it kept as commission, what came back, and what it still owes you.

Marketplace OMS

WORKING TODAY

Myntra, Flipkart, Ajio, Amazon, Meesho, Nykaa and JioMart in a single queue — processed all together, channel-wise, or design-wise. The stages the panels really use, with the right cut-off counting down on each order — a quick-commerce or air-shipped order is not due at the same hour as a standard one. Priority orders at the top, and the day grouped by design so a Muskan Purple is picked once for eleven parcels instead of eleven times.

Manual Data Check

to build

The order and return sheets you already download from the panels, and the offline registers from the three shops — one file or a whole ZIP — read back as ten cross-checks: net sale after commission and fees, month, design, state, wrong returns, SPF claims, ads, payouts and GST. Every figure clicks through to the transactions behind it.

Claims & Disputes

to build

Weight disputes, SPF shortfalls, parcels lost in transit and returns that came back with a different piece inside — filed as claims with the packing footage attached, and answered before they close. A claim awaiting your reply is money; one closed for no response is nothing, so the days left sit beside the amount.

Channels & Storefronts

to build

Connect a channel once and it stays in step: catalogue out, price out, stock out, orders in. Seven marketplaces and any website platform — Shopify, WooCommerce, Magento, BigCommerce, Wix or a custom site over its own API — each switchable without touching your data. Shopsy and any other storefront a channel runs alongside its main one counts as its own channel here. Where a channel has no open interface, its own downloaded report is a first-class way in. A channel may also know you by a different trading name — that is a label on the channel, not a second company, so it tags the order and the payout without ever splitting your books.

Order Management

WORKING TODAY

One pipeline from new to delivered, whether the order came from a seller panel, your Shopify or WooCommerce site, a dealer or the counter.

Reconciliation

to build

Match every marketplace payout to the order line that earned it, and expose the gap.

Returns / RMA

to build

Customer returns, courier returns and wrong returns kept apart — because only one of the three is really your fault, and only one of them turns into dead stock.

Labels & Documents

to build

The panel gives you a PDF; this hands the packing table something it can work from. Cropped to 4×6 for every channel, your design code printed large where the panel left it off, the invoice and slip merged behind it, and the whole batch to the label printer in one job. Reprint one parcel without redoing the lot — and no customer’s name and address is ever uploaded to an outside website to be cropped.

### Listing & Catalog Manager to build

Bulk-create and bulk-edit listings across every channel from the one product record in Inventory & Catalog, and catch the mismatches that quietly cost sales: listed but out of stock, or in stock but never listed.

### Size / Fit Recommendation AI to build

A fit suggestion at the point of purchase, built from the item's own measurements and the return history of buyers who picked each size — aimed straight at the return reason that costs the most: the right item in the wrong size.

### AR / Virtual Try-On to build

A way to see drape, fit and colour on a screen before buying, for items where a flat photo alone leaves too much to guess.

## HR & Payroll MODULE 16 4 APPS

# Pay everyone right, on time

Office staff on a monthly salary and karigars paid by the piece, in one register, with attendance driving both and the festival advance already deducted.

 **Markdown / Clearance Optimization**

**Social Calendar** to build

Plan and publish across every channel from one calendar.

**Repricing Engine** to build

Rules per panel and per design — floor, ceiling, match-lowest and a festive override — so a Diwali sale does not quietly go below cost. And what each change actually did: a design whose orders fell after a price rise shows as exactly that, next to the rule that raised it.

**Blog & Pages** to build

How to drape it, what to wear it to, which fabric for which season — written, scheduled and published to your own site with the meta and internal links already set.

**Markdown / Clearance Optimization** to build

The same rule engine that reprices for competitiveness, aimed at ageing stock instead: when to start discounting it and by how much, before it becomes a warehouse write-off rather than a sale at a lower margin.

**Campaigns** to build

Email, SMS and WhatsApp campaigns measured on real revenue, not opens.

**Automation** to build

If this happens, do that — across any module, without writing code.

**Events** to build

Trade shows and exhibitions worked as a channel of their own — booth, budget and every lead captured on the floor landing straight in CRM instead of on a stack of business cards.

 **AI Content Engine** MODULE 18 5 APPS

# Write it, shoot it, cut it — from your own catalogue

Listings, ads, reels and product photography generated from your own designs, in a voice that sounds like one person from Surat rather than a template — so the words match the piece and the picture is the size Myntra actually wants.

**Content Engine** to build

Fourteen stages in your own voice — buyer psychology, competitor reading, hooks, the product description, marketplace copy for Amazon and Myntra, ad variations, reel scripts, song lyrics for the reel, the calendar, size chart and alt text.

**Video Studio** to build

Text and image to video, reels and ad cuts sized for every channel.

**Publisher** to build

One push sends the listing, images and copy to the website and every panel, and reports back what went live and what a panel rejected, with the reason.

**Image Studio** to build

A phone photo becomes a listing image: layers, free transform, background removal, Myntra 1080×1440 and every other channel preset, watermark and SEO alt text.

**Design Studio** to build

Banners, festive creatives and thumbnails — templates, layers, undo and redo, any colour, exact sizing and stock elements, exporting PNG, JPG or PDF at whatever size the panel or the printer asks for.

 **SEO, AEO & AIO** MODULE 19 3 APPS

Be found by a search box,

# an answer box and an AI

Content already exists once this module is reached; here it is made findable — by a traditional search engine, by the answer box above the results, and by the AI assistants now answering shopping questions directly instead of sending someone to a results page.

READS FROM

Inventory & Catalog

AI Content Engine

WRITES TO

Marketing

Technical SEO & Schema

Answer-Engine Optimization

AI-Engine Visibility Tracking

Technical SEO & Schema

to build

Structured data, sitemaps and page-level technical checks against your own storefront and content pages, so a search engine can read what a page is actually about instead of guessing from the text alone.

AI-Engine Visibility Tracking

to build

Whether and how this business is actually cited when someone asks an AI assistant a shopping question in this category, tracked over time — the same discipline as rank tracking, aimed at a newer kind of result page.

Answer-Engine Optimization

to build

Content shaped to be quoted directly by an answer box or a voice assistant — a clear, citable answer near the top of the page — rather than written only for a person to scroll through.

Projects & Collaboration

MODULE 20

6 APPS

## The work that is not an order — and the talking around it

An exhibition in Hyderabad, a boutique’s custom order, a new godown fit-out, a legal matter with a supplier. Work that is not a sales order still has a deadline, a cost and documents — and it belongs on the same records as everything else.

Forum

Discuss

Knowledge Base

Projects & Cases

to build

An exhibition, a custom order for a chain, a fit-out or a dispute — stages you define, owners, deadlines, documents, hours and real cost, all on one record the ledger can see.

Approvals

to build

One queue for everything waiting on a yes: a mill purchase order, a boutique discount, a leave day, a credit note, a payment. The rule that sent it there is next to it, and the decision goes on the record.

Discuss

to build

The conversation attached to the record it is about — this order, this mill bill, this dispute — so a year later the reason for the decision is still sitting beside it.

Timesheets & Planning

to build

Who is on what this week and the hours that actually went in — against a project, an exhibition or a machine — with billable and non-billable kept apart.

Forum

to build

Questions and answers that outlive a chat — for customers, dealers or staff — with the useful ones kept where the next person will actually find them.

Knowledge Base

to build

A searchable internal wiki of standard operating procedures, scoped to the role it applies to, so how a task is meant to be done is written down once instead of carried in one person’s head.

Dashboard & BI

MODULE 21

5 APPS

# See the whole house without asking anyone

Every number rolls up here as work happens — the day’s marketplace orders, what the karigars finished, what is still lying at the dyer, what the mills are owed. No exports, no waiting for month-end.

READS FROM

Every module

WRITES TO

—

CEO Dashboard

Report Builder

Group Consolidation

Excel Dashboard Builder

ESG / Sustainability Reporting

CEO Dashboard

WORKING TODAY

Cash, sales by channel, stock by design, profit per piece and the alerts that matter — one screen, refreshed as the day runs.

Report Builder

WORKING TODAY

Drag the fields you want into a report and save it for the whole team.

Group Consolidation

WORKING TODAY

Ethnic Fashion, Vastrangam and Adini Couture as one set of figures, inter-company transfers removed, so the group position is real rather than three spreadsheets added together. Adini Couture has no registration of its own and mainly does job work — it still counts in the group, without being pulled into a return it does not belong in. Add the fourth company the day you open it.

Excel Dashboard Builder

to build

A full workbook — financial summary, HR, purchase, sales, inventory and production, GST, expenses — generated from the live records behind every other screen, with each company shown as its own row and a consolidated row that is a formula over them, never a separately typed total.

ESG / Sustainability Reporting

to build

Water usage, chemical compliance, waste and packaging, reported from the same certificate and audit records Quality & Compliance already keeps — so a sustainability report is a query over evidence already on file, not a separate exercise assembled once a year from scratch.

## HOW IT IS KEPT STRAIGHT

# The rules, the checks, and what we will not claim.

Software that runs a business earns trust by being checkable, not by being described well. These are the standards this build is held to — written down, because a standard nobody wrote down is a standard nobody can be held to.

The rules that hold everywhere

Integrity

✓ No app depends on any single outside company — every capability has interchangeable providers and a by-hand option

✓ A provider named as the source of a figure is a bug; the ledger originates numbers

✓ The books are this system's own — no other accounting package is ever required

✓ Money is integer paise, never a floating-point number

What it refuses to do

Safety

✓ Never asks for a marketplace, bank or account password — scoped, revocable keys only

✓ Nothing is deleted, only deactivated — history must still resolve

✓ The audit trail has no off switch: 8 years, before-and-after values

✓ Gates, not warnings — a COD order cannot be packed below its advance, a bill for more than was accepted cannot be paid

How it is verified

Evidence

✓ The arithmetic runs with no screen involved, against seeded data

✓ Every screen and every control is clicked in a real browser — any console error fails the build

✓ Not "did the button click" but "did the thing happen"

✓ Against the owner's own figures: the karigar run must return 25,307 sets, 59,110 pieces, ₹26,90,062

What we will not claim

Honesty

✓ Nothing is called finished that is not — every app above is marked working today or to build

✓ Counts are counted from the source at build time, never typed by hand

✓ If a test fails, the failure is shown with its output

✗ The 16 working apps still run on their own storage — rewiring them onto the shared core is the first job of Module 01

✓ Salaries, prices, tax rates and commissions are effective-dated — March payroll uses March's salary

✓ It is not trained, it is built — no model learns from your data

✓ The shipped archive is re-tested after extraction, not just the working copy

✗ 82 apps are designed and specified, not yet written

BUILT DEEP, NOT WIDE

# The controls that pay for the software

## Three-way match

A supplier bill only passes when the purchase order, the goods receipt and the invoice agree on price and quantity. Bills that over-charge or over-bill rejected goods are held automatically, with the reason in plain language.

## Vendor risk that sees ahead

Risk blends weak performance, spend concentration and overdue bills. Your *best* supplier still flags medium risk when 44% of your buying sits with them — the fact worth knowing before a disruption, not after.

## Settlement reconciliation

Import a marketplace settlement, match it to the orders, and see every commission, TCS deduction, weight discrepancy and short payment — with a claim pack ready to file.

## Karigar piece-rate

Pooled set completion, per-garment rates, alteration hours and advances roll into each karigar's payout — and into a true cost per piece for every design.

## One stock number

One quantity per SKU per location per stage, pushed to every channel. Overselling stops being a monthly apology.

## AI studio built in

Listings, ad copy, product photography and reels generated against your own catalogue — not a bolted-on chatbot, but the same data core.

INDUSTRIES

# Built on the neutral engine, dressed for this trade

Every screen you are about to read is the same code as the Medhava edition. Only the master data and the words change — which is exactly why a machine shop or a law firm can run it too.

What is different here

Fabric in metres and pieces in numbers on the same item master. Karigar piece-rate with pooled set completion. Design-wise costing to the paise. HSN 5007 / 5208. Wrong-return dead stock treated as the loss it is.

The channels you actually sell on

Myntra, Flipkart, Ajio, Amazon, Meesho, Nykaa and JioMart in one queue, plus the Surat counter, the boutique wholesale book and export to the Gulf — all writing to the same order table.

The people who make it

Cutting, stitching, embroidery, finishing and checking as stages you set. Karigars paid by the piece, staff paid by the month, both in one register and one payout.

The compliance you file

GST on ethnic wear slabs, TCS the marketplaces deduct, TDS on job work, LUT bond and IGST refund on export — all worked out from the same vouchers.

COMPARISON

Medhava vs. a suite of integrated apps

The difference is architectural, not cosmetic.

| CAPABILITY               | MEDHAVA                               | TYPICAL SUITE               |
|--------------------------|---------------------------------------|-----------------------------|
| Architecture             | One app, one data core                | Many apps, integrated       |
| Master data              | Single Item & Party record            | Duplicated per app, synced  |
| Stock truth              | One number per SKU × location         | Per-app, reconciled nightly |
| Cross-module posting     | Instant, via event bus                | Scheduled sync jobs         |
| Marketplace settlement   | Reconciled to order line + claim pack | Usually a separate tool     |
| Piece-rate manufacturing | Built in                              | Custom development          |
| AI content & imaging     | Native, on your catalogue             | Third-party add-on          |
| Offline capability       | Single-file apps run offline          | Cloud-only                  |

TRUST & SECURITY

# Your credentials are never the key

## Scoped keys only

Marketplace, bank and courier connections use revocable, scoped API keys held in an AES-256-GCM vault. Medhava never asks for, uses or stores an account password.

## Isolation by row

Every record carries a company id and is enforced by PostgreSQL row-level security. Group companies stay separate but consolidate on demand.

## Immutable audit

Every posting, price change and permission grant is written to an append-only trail with actor, timestamp and before/after values.

### THE GAP

## Three categories of software. Nobody sells all three.

You are not short of tools. You are short of one tool that covers all of it — which is why the numbers never agree.

### Accounting & ERP suites

Tally · BUSY · Marg · Zoho · Odoo

- ✓ Books, GST, stock, purchase
- ✓ Manufacturing, payroll
- ✗ No marketplace order queue
- ✗ No settlement reconciliation or claims
- ✗ No content, image or video studio

### Marketplace OMS platforms

Unicommerce · EliteSecom · SmartHub

- ✓ Panel orders in one queue
- ✓ Inventory sync, settlement
- ✗ No double-entry books, no GST return
- ✗ No manufacturing, purchase or payroll
- ✗ No content, image or video studio

### AI content tools

Writing · image · video generators

- ✓ Copy, pictures, reels
- ✗ Knows nothing about your catalogue
- ✗ No orders, no stock, no books
- ✗ Nothing publishes to a channel
- ✗ Nothing reconciles afterwards

### Medhava

All three, over one data core

- ✓ Books, GST, stock, purchase, manufacturing, payroll
- ✓ Marketplace and storefront order queue
- ✓ Settlement, claims, returns, packing footage
- ✓ Content, image, design and video studio
- ✓ One record underneath all of it

In an accounting package you will never get a marketplace OMS. In an OMS you will never get your books. In a content tool you will never get either. That is the gap. Medhava is built in it.

### THE APPROACH

## Built deep, not wide

A long feature list is easy. What is hard is the one control that stops the money leaking — so every module ships with one, and refuses rather than warns.

01

### Accepted, not ordered

You order 100. 100 arrive. Quality accepts 96. Most systems raise stock by 100 and claim tax credit on 100. Medhava raises stock by 96, claims credit on 96, raises a debit note for the 4, and lowers that supplier's accept rate. Automatically.

02

### The payout, to the order line

Not "the channel paid ₹49.1 lakh". Which order line was short, by how much, against which published commission rate — with the claim pack already assembled and the packing footage attached.

03

### Nothing derived is stored

Outstanding, ageing, promise dates, payouts, on-time percentage and risk are recomputed every time you read them. A stored number goes stale the moment the document under it changes. These cannot.

## PRICING

# Start free. Pay when it runs your business.

The software puts no ceiling on how many companies you run — your plan does, and you move up when you need to. Two of the 20 modules — E-commerce / OMS and the AI Content Engine — are priced on what you actually use, because an order is work and a piece of content is work.

## E-commerce / OMS & AI Content Engine

These two are metered, the way every serious order-management platform prices. You pay for orders that actually shipped and content that was actually produced — not for a seat that sat idle.

E-commerce / OMS

AI Content Engine

#### PER ORDER PROCESSED

| ORDERS A MONTH                                                                                   | PER ORDER  | INCLUDED                          |
|--------------------------------------------------------------------------------------------------|------------|-----------------------------------|
| Up to 1,000                                                                                      | ₹2.50      | All channels, settlement, returns |
| 1,001 – 10,000                                                                                   | ₹1.80      | + claims desk, packing footage    |
| 10,001 – 50,000                                                                                  | ₹1.40      | + multi-warehouse routing         |
| Above 50,000                                                                                     | On request | + dedicated throughput            |
| An order is counted once, when it is dispatched. A cancelled or unshipped order is never billed. |            |                                   |

#### PER PIECE PRODUCED

| WHAT IS PRODUCED                                                                          | COUNTS AS | RATE |
|-------------------------------------------------------------------------------------------|-----------|------|
| Channel listing (title, bullets, description)                                             | 1 content | ₹6   |
| Social post, caption or ad variation                                                      | 1 content | ₹4   |
| Product image · background, resize, preset                                                | 1 content | ₹3   |
| Reel or video cut, per finished clip                                                      | 1 content | ₹25  |
| Bring your own model key and the rate drops to the platform fee alone — no lock-in, ever. |           |      |

#### REQUEST A DEMO

## Bring one month of your own data

Sales, purchases and stock for a single month. In forty minutes you will see what your current tools are hiding — the short payouts, the returns nobody costed, the stock that two systems disagree about.

- ✓ No obligation and no card details
- ✓ Your data stays yours — we work on a copy and delete it after
- ✓ You leave with the numbers, whether or not you buy

#### YOUR NAME

#### COMPANY

#### WORK EMAIL

#### PHONE

#### WHAT DO YOU RUN TODAY?

#### ORDERS A MONTH

#### ANYTHING SPECIFIC YOU WANT TO SEE?

[Request a demo](#)

We reply within one working day. Medhava will never ask you for a marketplace, bank or account password.

#### QUESTIONS

## Frequently asked

What is Medhava?

Medhava is a unified ERP made of 20 modules and 98 apps that all read and write one shared data core — Item/SKU, Party, Stock, Ledger and Order. Because the data is shared, a single action such as a goods receipt updates stock, the ledger, quality records and the vendor scorecard at the same time.

How is Medhava different from Zoho or Odoo?

Does Medhava support Indian GST?

Which marketplaces does Medhava connect to?

Can Medhava be used outside textiles?

Is my data safe?

Can I use it without internet?

How long does implementation take?

# Stop reconciling. Start running.

See your own numbers inside Medhava. Bring one month of sales, purchases and stock — we will show you what your current tools are hiding.
