

MODULE 14 · VASTRANGAM SUITE

Vastrangam AI Engine

One studio for the whole catalogue workflow — bulk upload, content, image editing, video, design and publishing over one set of records, with free-first AI and an assistant that works offline.

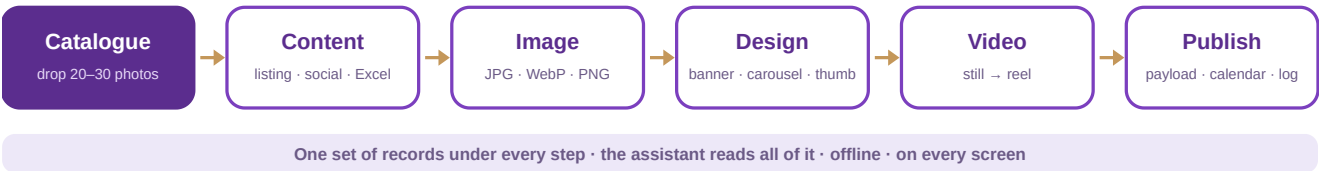

Desire to Attire · Crafted in Surat. Worn Everywhere.

Vastrangam_AI_Engine.html · 326 KB · works with the internet off · 30/30 self-tests pass

What it is

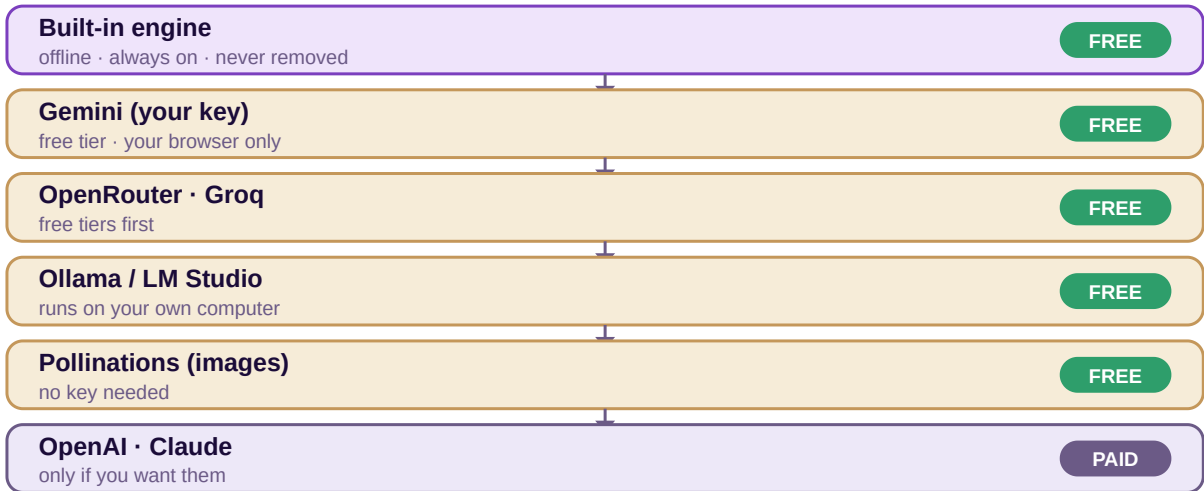

Six tools most people buy separately — a bulk catalogue organiser, a listing writer, a Photoshop-style photo editor, a reel maker, a Canva-style designer and a publishing scheduler — rebuilt as one HTML file that opens by double-click and runs with the internet switched off. They share one set of records, so a set of photos you drop in is instantly ready to write, edit, design, film and publish. On every screen an assistant reads those records and answers in plain language.

The workflow, in one picture

The **Catalogue** is the top of the flow: drop 20–30 photos and they group into **Product** → **Colour variant** → **Pose**. Everything below reads from it — which is the whole reason it is one app and not six.

Free-first AI, never locked to one company

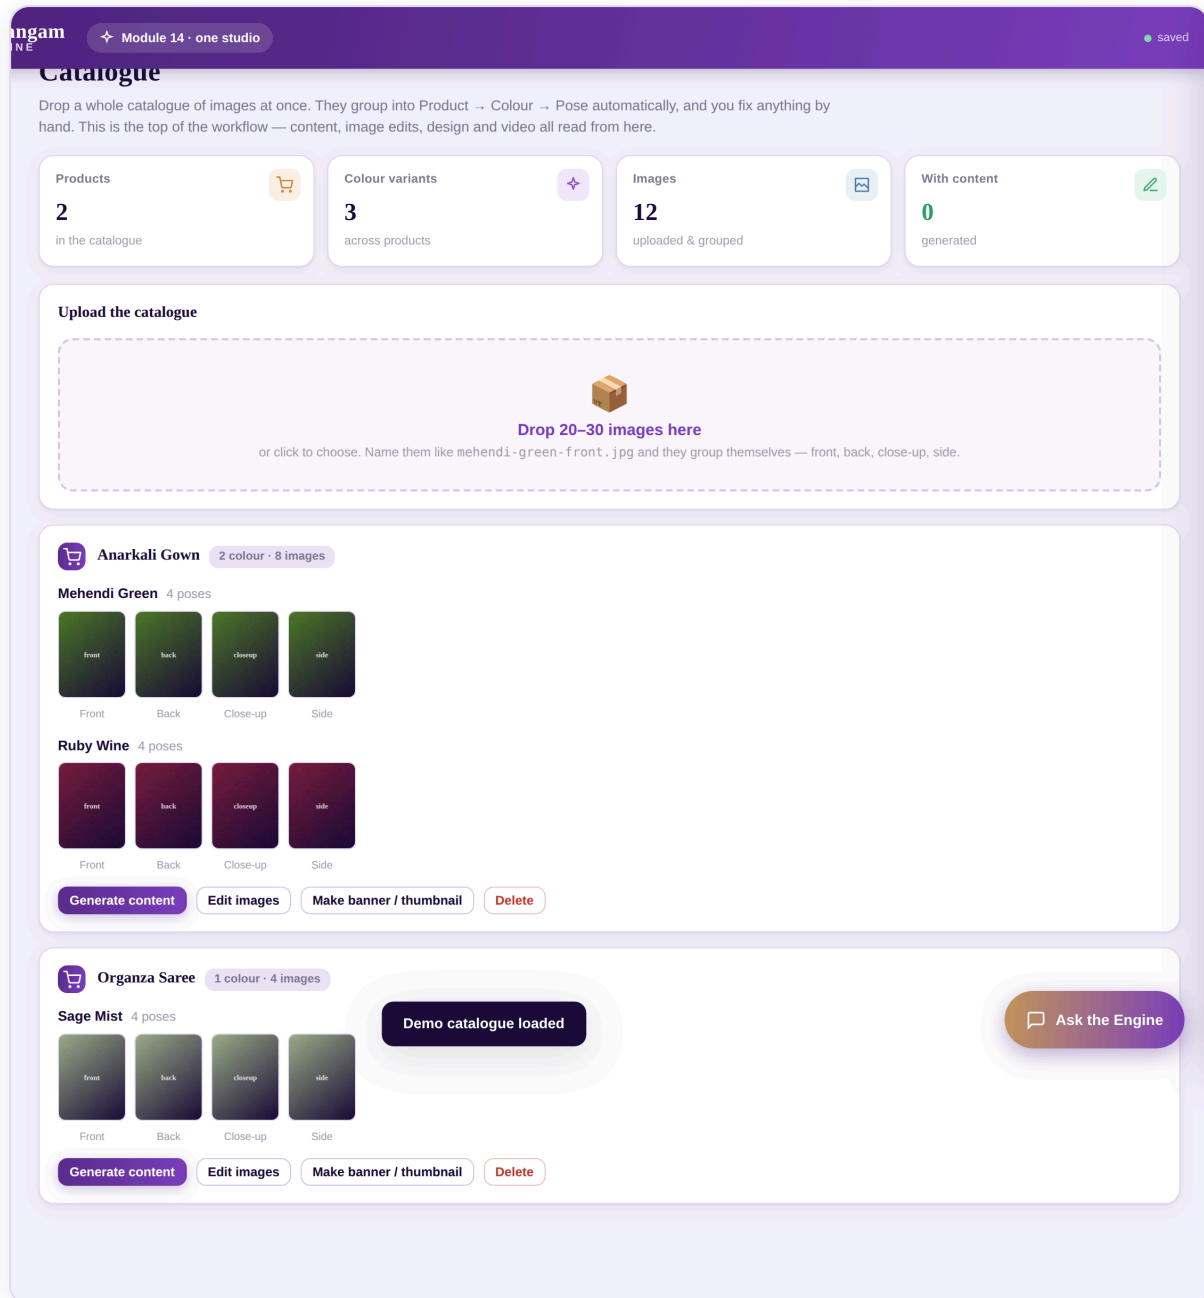

tries top-down, falls back down the chain

Everything works offline with the built-in engine. Connect a model to upgrade the prose and generate images — **free options first, paid last, never required**. Your key is stored in **your browser only**, never in the file.

The Catalogue — the top of the workflow

Drop 20–30 images at once. Each is read by its filename and grouped automatically into Product → Colour variant → Pose (front, back, close-up, side). Fix any tag by hand, then every product has one-click Generate content, Edit images and Make banner / thumbnail. Full-resolution photos are held in the browser's own IndexedDB, so thirty of them are no problem — and it is still offline.

A demo catalogue after grouping — two products across three colour variants (Anarkali Gown in Mehendi Green and Ruby Wine, Organza Saree in Sage Mist), each resolved into its front / back / close-up / side poses, ready to push straight into content, images and design.

The Content Engine

Type a product, or generate straight from a catalogue product. All 13 phases run offline, from the colour, fabric, craft and occasion libraries in the Vastrangam spec. A connected model is optional — it only upgrades the prose; the pack, the uniqueness check and the QA gate run without one.

[illegible]

A real generated run — four title variants with character counts, a humanized Shopify body whose opening line never starts with the product noun, and the specification table with no blank cells.

QA gate machine-checkable

10 of 10 checks pass

These run on every generated pack. A fail means the pack should not ship as-is.

Opening line does not start with the product noun	pass
No banned AI-skeleton phrase appears	pass
Song lyrics contain no product word	pass
Specs table has no blank cell	pass
SEO title within 60 chars	pass
Meta description within 160 chars	pass
Handle within 60 chars, hyphenated	pass
At least 3 product-unique long-tail tags	pass
Four distinct title variants produced	pass
AEO question-answer block present	pass

The QA gate: opening line, banned phrases, lyric purity, blank cells, title and meta lengths, handle format, tag count, four distinct titles and the AEO block — ten checks, with a live score ring. Beside the 9-sheet Excel, one click also builds a market-analysis .doc (trends · competitors · gap · what you do better).

Image Studio — Photoshop-style

A real layer editor, not a mock-up: an image / text / shape layer stack, live brightness · contrast · saturation · hue · blur, one-tap filters, an instant offline background cut-out (with an optional sharper model), and a white-studio backdrop.

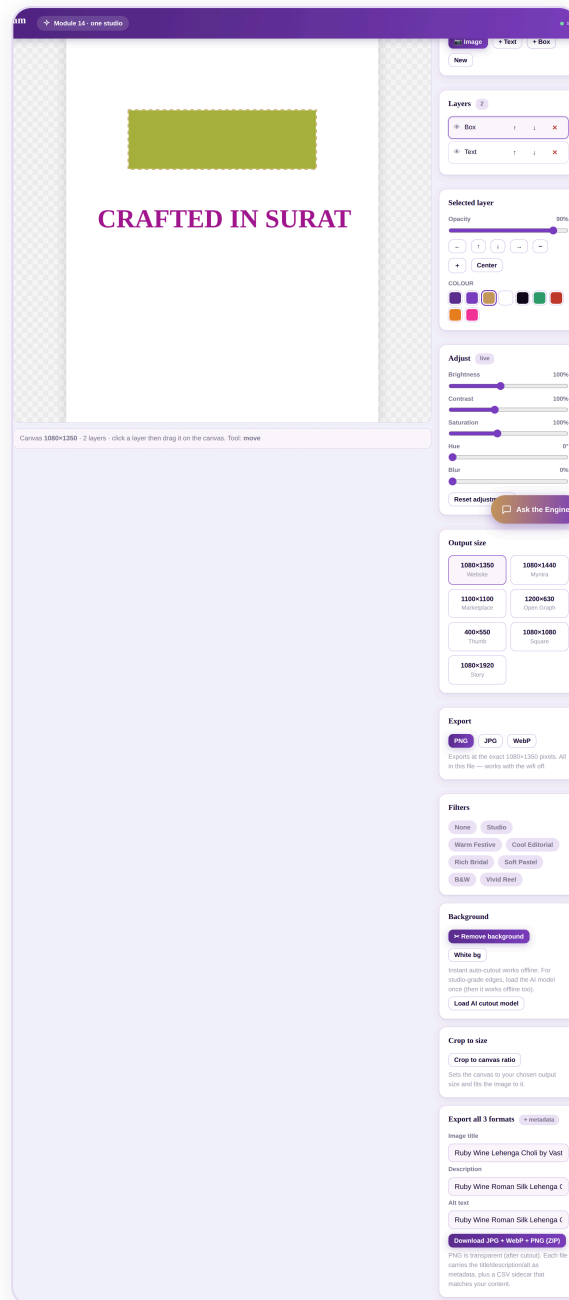

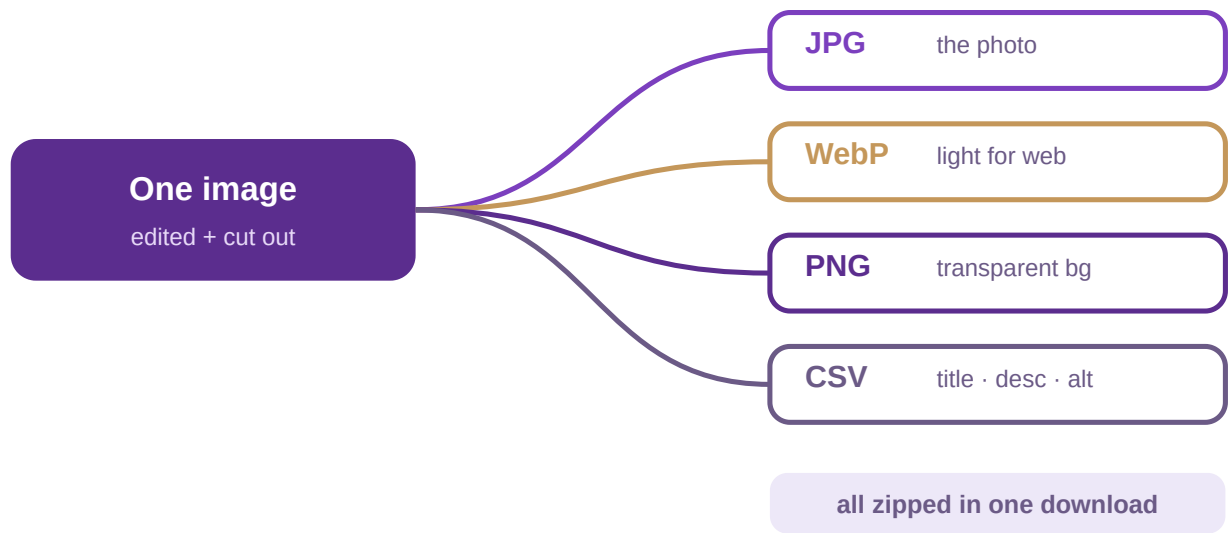

Image Studio — the layer stack with a live adjustment applied across the canvas. Catalogue shots open here directly with "Edit images".

One image, three formats, matched metadata

Press **Download JPG + WebP + PNG** and all three come out at once — JPG for photos, WebP light for web, PNG with a transparent background — plus a metadata CSV carrying the **title / description / alt text** matched to that product's content, all in one ZIP.

Design Studio — Canva-style

Templates and a poster canvas styled by the active theme, filled from a content run in one click, with Magic resize between sizes. The Quick assets panel builds the three you need most — a web banner (1500×500), a YouTube thumbnail (1280×720), and a full carousel.

Carousel — 10 slides ready

Ask the Engine

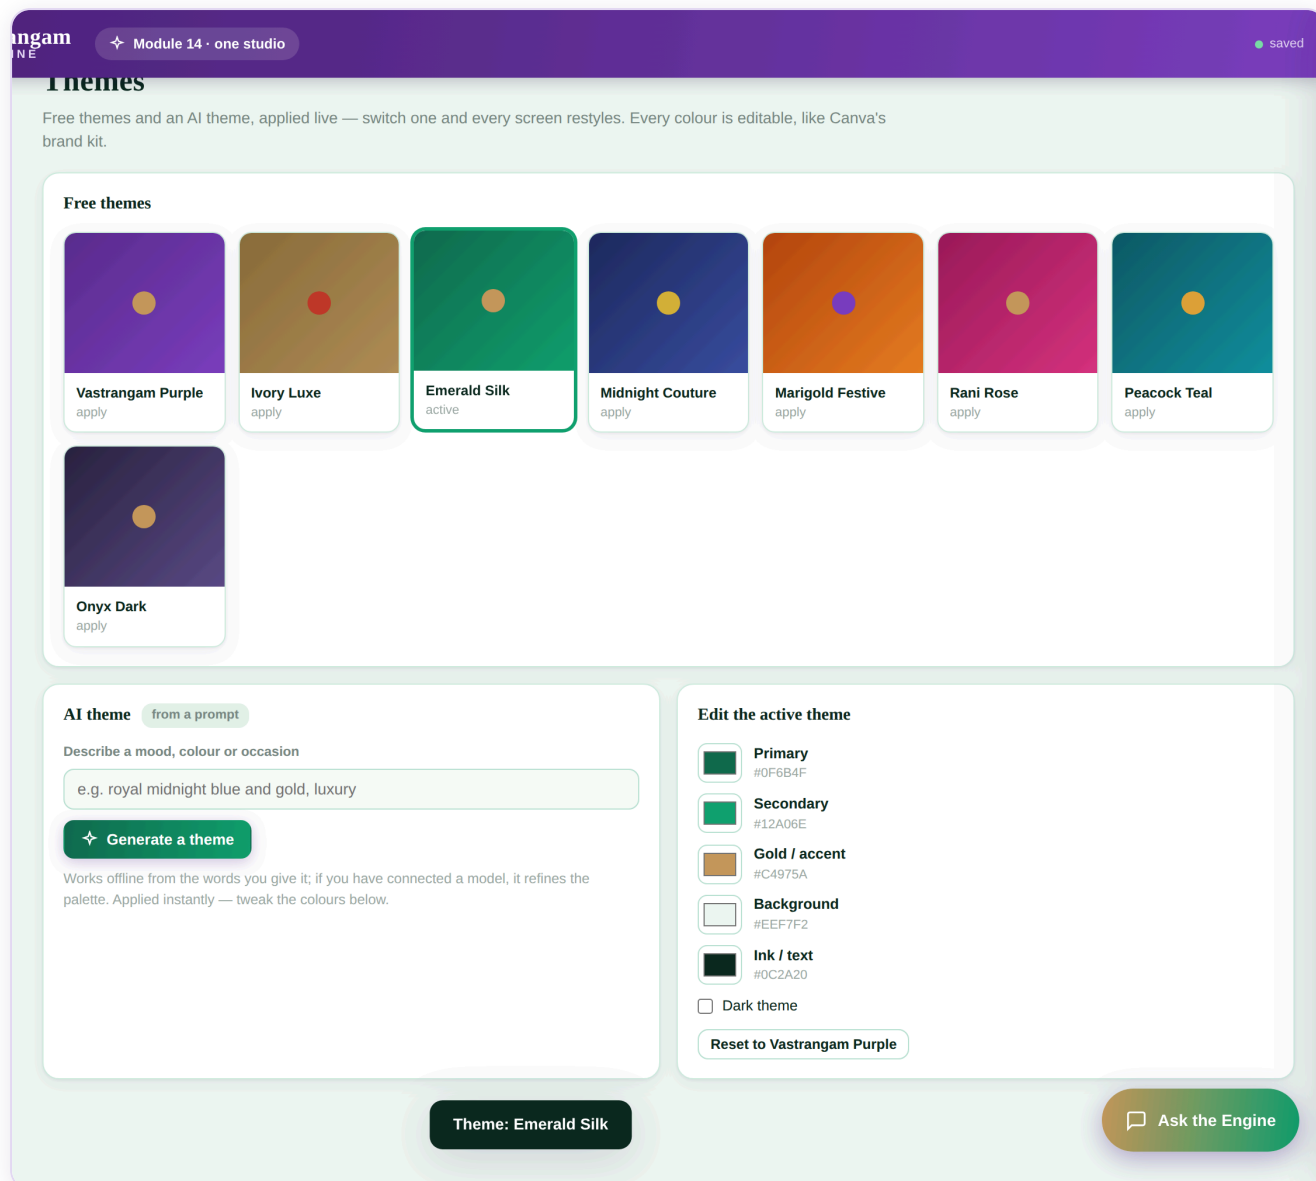

A ten-slide carousel built from a content run — every slide themed and filled automatically, ready to review and export as a ZIP.

The Design Studio canvas — brand-kit colours, editable text and elements, and one-click fill from a run.

Themes — restyle everything, like a brand kit

Eight free themes, or type a mood into the AI theme box (for example "royal midnight blue and gold") and it builds a matching palette instantly and offline — refined further if a model is connected. Every colour is then an editable control, and your choice is applied the moment the app opens.

The Themes screen with Emerald Silk applied — the whole app, every screen and canvas, restyled in one click; each colour below is editable by hand.

Everything on the calendar

DATE	CHANNEL	FORMAT	HOOK	STATUS	
2026-08-04	A Amazon	Listing	Ruby Wine Lehenga	Published	
2026-08-06	IG Instagram	Reel	The colour you are allowed to wear	Scheduled	Ask the Engine Publish now
2026-08-07	S Shopify	Listing	Mehendi Green Anarkali — live	Scheduled	Publish now

Publisher — schedule a run to channels, see it on a live calendar, publish, and watch the log. Channels connect with a scoped, revocable key — never a password.

Ask the Engine — answering a vocabulary question with the source it read from. Ask it "what can this tool do" for the full tour.

The assistant answers

"how many runs do I have?"	live count
"what can this tool do?"	full tour
"how do I make a reel?"	the steps
"what is zardozi?"	from the library
"open Content Engine"	navigates

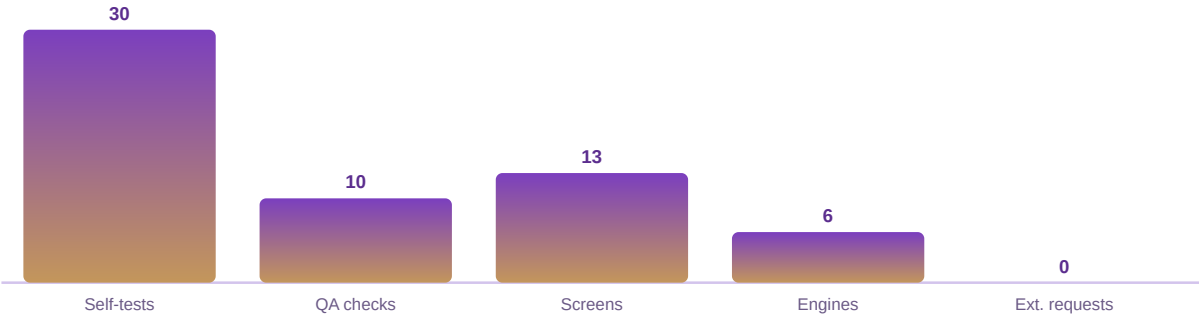

It will never ask for a password. Channels use scoped keys only. If any screen asks for a marketplace, bank or account password, it is not this app.

No lock-in, and how it was verified

Every capability has a built-in offline way

Capability	Built-in (offline)	Or plug in (free first)
AI text / chat	rules engine	Gemini · OpenRouter · Groq · Ollama · GPT · Claude
AI images	algorithmic / auto	Gemini · Pollinations (no key)
Background removal	instant auto cut-out	optional ML model (downloads once)
Video render	WebM · GIF · frames	FFmpeg · Veo (for MP4 / real AI video)
Spreadsheets	built-in .xlsx/.csv	Google Sheets · Excel
Publishing	payload + log	Shopify · Amazon · Meta...

Verified in a real browser

30/30 self-tests pass · the app was driven through every screen with zero console errors · with all non-file requests blocked it still bulk-groups a catalogue, generates a full pack, builds a carousel and applies a theme — 0 external requests. It is genuinely offline.
