

MODULE 02 OF 16

CRM

CRM & Customer 360 · Documents & eSign · Helpdesk & Live Chat · and all three in one

4 apps × 2 editions — Medhava (any industry) and Vastrangam

Three apps that are really three views of one record. A lead becomes a customer; a document is filed against that customer or one of their orders; a question about that order becomes a ticket on the same record. The fourth app is all three at once, over records you can type, edit and upload.

- 8 working apps
- 340 self-tests, all passing
- Zero console errors
- Every screen and button verified

What this module is

Module 02 is the **relationship** layer. Everything in it hangs off one record — the party — and that is the whole reason these three apps are one module rather than three products.

The four apps

APP	WHAT IT IS RESPONSIBLE FOR	SELF-TESTS
1 · CRM & Customer 360	The deal on the way in, and the whole lifetime after it	42
2 · Documents & eSign	Everything filed against a record, and what a signature actually is	41
3 · Helpdesk & Live Chat	Every question, tied to the customer and the order it is about	38
4 · All three in one	The same three over one set of records you can type into and upload to	49

Two editions of each

EDITION	WHAT IT IS
Medhava	The unified ERP, industry-neutral. What a document may be filed against is a setting, so the same app serves a practice filing against a case and a workshop filing against a job.
Vastrangam	The same engine with real buyers, mills, marketplaces and test reports in it — so the neutrality can be tested rather than claimed.

Contents

- 2. The spine: one record, three apps
- 3. App 1 · CRM & Customer 360
- 4. App 2 · Documents & eSign
- 5. App 3 · Helpdesk & Live Chat
- 6. App 4 · All three in one
- 7. What you were sent, and how to open it
- 8. How this module was verified

The spine: one record, three apps

The seven rules this module enforces on itself

RULE	WHY IT IS A REFUSAL AND NOT A WARNING
One party, never two	Two records for one customer means two answers to "what are they worth", both looking right.
A document belongs to a record	Filed against nothing, it is in the system and unfindable from the only place anybody looks.
A signature is a one-time code	A signature nobody can evidence is worse than none, because everybody believes it.
No signing what was never sent	A document cannot come back before it goes out.
The reply clock is derived	A metric anybody can type is a metric that will be typed.
No closing a ticket unanswered	That is a customer ignored, then marked "resolved".
A ticket names its own party's order	Otherwise one customer is told about another customer's delivery.

Each of these is also a self-test, and the importer holds every one of them too. An import that could do what a form refuses would be a back door around the rule.

WHAT HAPPENED

Called about the July order — asked for longer terms

Record it

- Customer 360 — one record carrying all three apps. Vastrangam edition.
- जीतने पर दूसरा record नहीं बनता — अगर वो company पहले से books पर है तो deal उसी record से जुड़ जाती है. एक customer के दो record ही वो चीज़ है जिससे "ये कितने के हैं?" के दो अलग जवाब निकलते हैं और कोई नहीं बता सकता कौन सा सही है.
 - Forecast ईमानदार है — हर stage की अपनी probability (New 10%, Contacted 25%, Quoted 50%, Negotiation 75%). Plan करने लायक number weighted वाला है, वो नहीं जो सब बोल्ते हैं.
 - छह behaviour groups, rule से — कितनी बार खरीदा और कितने दिन पहले. कोई हाथ से tag नहीं करता, इसलिए किसी के खरीदते ही या चुप होते ही group खुद बदल जाता है.

Everything on file

Filed against the record it belongs to. Send one for signature and the signed copy files itself back here.

That was refused

a rule, not an error

No one-time code was given. A signature is only a signature if it can be evidenced: the code goes to Vikram Nair, comes back from them, and is recorded against the document. Ticking a box is not a signature.

Party

e.g. P1

2027-03-31

Which record must be a record that exists — a party code, an order number, or the name of the Style or job or Person it belongs to. Filing against nothing is the one thing this app will not let you do quietly.

A signature refused for want of a one-time code. Vastrapuram edition.

- Signature का मतलब यहाँ एक ही है — छह अंकों का one-time code उस आदमी को गया जिसका नाम लिखा है, वापस आया, और document पर दर्ज हुआ. Code नहीं तो signature नहीं. कोई tick box नहीं, कोई menu नहीं, import से भी नहीं.
- जो record मौजूद ही नहीं, उस पर file करना मना है — यही वो एक गलती है जो पूरे filing system को बेकार कर देती है: document system में है और जहाँ से कोई ढूँढ़ेगा वहाँ से मिलता नहीं.
- Document किस चीज़ पर file हो सकता है यह setting है, मान्यता नहीं — वकील case पर करता है, workshop job पर, कपड़े वाला style पर. तीनों वही एक field है, बस शब्द अलग.
- 60 दिन में expire होने वाले सामने रहते हैं — चुपचाप lapse हुआ agreement मतलब चुपचाप reset हुआ rate.
- Password कभी नहीं — one-time code password नहीं है. Medhava कभी आपसे marketplace, bank या account का password

Medhava · Module 02 — CRM

5 / 9

App 3 · Helpdesk & Live Chat

One ticket, with everything already known about the person asking. Vastrapuram edition.

- ▶ पहली reply का समय messages से निकाला जाता है, टाइप नहीं होता — कोई field ही नहीं है जिसमें उसे डाला जा सके. जो नंबर कोई टाइप कर सकता है वो टाइप कर ही दिया जाएगा, और फिर दीवार पर लगा नंबर कुछ नहीं बताता.
- ▶ बिना एक भी जवाब दिए ticket बंद नहीं हो सकता — ignore करके "resolved" लिख देना यहाँ मना है.
- ▶ किसी और के order से ticket नहीं जुड़ सकता — इसी तरह एक customer को दूसरे की delivery के बारे में बता दिया जाता है.
- ▶ हर channel और हर आदमी का असली ऑफिस — कहीं से सवाल आते हैं, कौन कितनी जल्दी जवाब देता है. सब messages से गिना हुआ.
- ▶ यही ticket उस customer की 360 timeline पर भी दिखता है — copy होकर नहीं, वहीं से पढ़कर.

Records · File

Upload and download

Bring your Excel or CSV in, or save everything back out. No account, no internet, no library — it is all in this file.

Bring data in

Choose an .xlsx or .csv file

Download a blank template

Column headings are matched to fields by name. In any order, ignoring case and spacing. Columns we do not recognise are left alone, not treated as an error — a real export always carries columns you do not want. Party columns accept either the code or the full name. A row naming a party that does not exist is rejected with that reason rather than quietly creating one, because a typo should not become a second customer.

Ready to bring in

upload.xlsx

SHEET IN YOUR FILE	GOES INTO	ROWS	ACCEPTED	REJECTED
Tickets	Tickets	3	1	2

Add these to what is already here

Replace those tables entirely

Cancel

2 row(s) will not be brought in. Every one is listed below with the reason. Nothing is dropped silently.

SHEET	ROW	WHY IT WAS NOT ACCEPTED
Tickets	3	order SO-1006 belongs to Riverside Ethnic, not to this party
Tickets	4	there is no party "GHOST CO" — add the party first

Take data out

Download everything as Excel

Download this table as CSV

Download a JSON backup

One sheet per table, with the same headings the importer expects — so what comes out can go straight back in.

TABLE	ROWS	COLUMNS
Parties	8	Code · Name · Kind · City · Email · On the books since
Leads	19	Code · Person · Organisation · Came from · Value · Stage · Open / won / lost · Raised on · If lost, why · Became party
Orders	28	Order · Party · Date · Amount · Returned · Channel
Documents	12	Reference · Title · Kind of document · Filed against · Which record · Issued on · Expires on · State · Who signs it · Signed on · One-time code used
Tickets	8	Ticket · Party · About which order · Arrived by · Subject · Priority · Handled by · Opened at · Closed at
Ticket messages	16	Reference · Ticket · Customer or us · At · What was said
Conversation log	3	Reference · Party · Date · Call / visit / email · What happened

Two rules the importer will not bend

1 row(s) ready — check the list, then choose

A document cannot be imported as "signed" with no one-time code against it. If a spreadsheet claims a signature that cannot be evidenced, the row is refused — importing is not a back door around the rule.

A ticket cannot be imported against somebody else's order. Same reason as on screen: it would put one customer's delivery on another customer's record.

The rules live in the engine, so the form and the importer enforce exactly the same ones, with the same sentence explaining why.

An upload staged: one row accepted, two refused by name — Vastrangam edition.

- ▶ तीनों apps के buttons एक साथ — deal जीलिए, document sign कीजिए, ticket का जवाब दीजिए — app बदले बिना. अकेला CRM app जानबूझकर sign और reply नहीं कर सकता; यहाँ कर सकते हैं.
- ▶ Add · edit · delete — हर table — parties, leads, orders, documents, tickets, ticket messages, conversation log.
- ▶ अपनी Excel या CSV upload कीजिए — पूरा spreadsheet engine इसी file के अंदर लिखा है, इसलिए internet बंद करके भी upload चलता है.
- ▶ Importer वही rules मानता है जो screen मानती है — बिना code वाला "signed" document और किसी और के order वाला ticket import में भी मना है. जो form मना करे और import कर दे — वही तो पिछला दरवाज़ा है, और सब उसी से घुसना सीख जाते हैं.
- ▶ कोई row छुपचाप नहीं गिरती — पहले सिर्फ दिखाया जाता है: कितनी accept, कितनी reject, और हर reject की line number और वजह. आपके "हाँ" के बाद ही कुछ लिखा जाता है.

Test here, and you have tested all three.

What you were sent, and how to open it

Two separate ZIPs, plus this note. **There is no combined outer ZIP** — each edition arrives on its own, so you never have to unpack something twice to find the one you wanted.

Opening it

1. **Pick your edition** — **MEDHAVA ...zip** for the neutral ERP, **VASTRANGAM ...zip** for the Vastrangam build. You can extract both; they do not collide.
2. **Extract it**. Windows: right-click → "Extract All". Mac: double-click it.
3. **Open the app folder** you want. Everything for that app is in it: the app, its manual, its PDF.
4. **Double-click the .html file**. Every filename starts with MEDHAVA_ or VASTRANGAM_ and carries the module and app number, so you always know which one you have open.

The one mistake to avoid: opening the HTML file directly from inside the ZIP. Windows unpacks it to a temporary folder that gets wiped, so your data appears to vanish. Always extract first.

All 4 apps can be open at once, in both editions. Each keeps its own data under its own name, so nothing collides — and in the hosted version they share one order book, which is what the Wiring screen in each app describes.

And the check that matters

The combined app is driven end to end the way a person would drive it: a deal is won for a customer already on the books and the party count is checked **not** to have moved; a document is filed against nothing and the refusal is read; it is filed properly, sent, signed with the wrong code, refused, then signed with a real one; a ticket is closed unanswered and refused, attached to somebody else's order and refused, answered and then closed; an order is typed in, checked onto the customer's worth and timeline, and deleted again; and a workbook with two bad rows is uploaded, staged, and each refusal read by name.

39 checks, both editions, all passing. A test that only proves a button can be pressed is not worth much. These prove the buttons do the right thing — and refuse the wrong thing.
