Purchase is live — Procurement + Vendor Management →

Run your whole business on one system

Medhava replaces the eleven tools you run today — accounting, stock, marketplace orders, manufacturing, staff and GST — with one application where every number agrees with every other one. Record a goods receipt once, and your stock, your books, your quality record and your supplier score all move in the same instant.

Start free for 30 days

Book a demo

- ✓ Free for 30 days
- ✓ No card details
- ✓ Works with the internet off
- ✓ GST, TDS & TCS ready

15

Modules, one login

65

Apps over one data core

1

Stock number for every SKU

7

Marketplaces connected

WHAT MEDHAVA IS

One application. Not eleven that talk to each other.

Every other suite sells you separate products and a sync job between them. Medhava is a single application over one set of records — so there is nothing to synchronise, and nothing to reconcile.

1

Enter it once

A goods receipt, a counter sale, a marketplace order — recorded in one place. Stock, the ledger, the quality record and the supplier scorecard all update in the same instant, because they are reading the same record.

2

Numbers that cannot disagree

One stock figure per SKU. One ledger. One order record. Not a copy per channel that somebody reconciles on Saturday. When the website says four are left, four are left.

3

Built for how India actually runs

GST with input credit on accepted goods, TDS and TCS, seven marketplaces, piece-rate and output-based wages — and apps that keep working when the internet does not.

WHAT CHANGES FOR YOU

The same day, before and after

Nothing here is a new way to run your business. It is the work you already do, arranged so that it only has to be done once.

TODAY

- ✗ Log into seven seller panels, one at a time
- ✗ Copy each order into a sheet, then into the books
- ✗ Guess which stock figure is the real one
- ✗ Learn at month-end that a mill over-billed you
- ✗ Chase a marketplace shortfall you spotted six weeks late
- ✗ Ask three people for their file before you can see one number

WITH MEDHAHA

- ✓ One queue, sorted by whichever order is closest to being late
- ✓ The order writes itself into stock and into the ledger
- ✓ There is one stock figure, so there is nothing to choose between
- ✓ An over-billed invoice cannot be paid — the match refuses it
- ✓ Every shortfall is on a screen the day the payout lands
- ✓ Open the dashboard. It was already up to date.

Medhava at a glance

What it is	A unified ERP: 15 modules and 65 apps sharing one data core and one event bus.
Shared data core	Item/SKU · Party · Stock · Ledger & Voucher · Order — every module reads and writes these.
Key difference	Not a suite of integrated apps. One application, so there is no sync step and no duplicate master data.
Compliance	Double-entry accounting with CGST/SGST/IGST, TDS, TCS, ITC on accepted goods, GSTR-1 and GSTR-3B.
Channels	Amazon, Flipkart, Myntra, Meesho, Ajio, Nykaa, JioMart, plus Shopify and WooCommerce.
Security	PostgreSQL row-level security per company; integrations use revocable scoped API keys in an AES-256-GCM vault — never account passwords.
Deployment	Hosted multi-tenant cloud, or single-file offline apps that run by double-clicking with no install.

THE PROBLEM

Your business runs on eleven tools that don't talk

Accounting in one place, stock in a spreadsheet, marketplace orders in seven seller panels, contractor wages in a notebook. Every month-end becomes an archaeology project.

Numbers that disagree

Stock says 40, the marketplace says 12, the books say something else again. Nobody knows which is right, so everyone guesses.

Work entered three times

The same invoice keyed into the seller panel, the spreadsheet and the accounting package. Three chances to be wrong.

Money quietly leaking

Over-billed purchases, unclaimed marketplace shortfalls, RTO losses — invisible until the year is over.

HOW IT WORKS

One data core. One action cascades everywhere.

Every module reads and writes the same five entities. That is the physical reason a single goods receipt can touch stock, books, quality and sourcing at the same instant.

UNIFIED DATA CORE

Item / SKU

Party

Stock

Ledger

Order

→ Inventory · stock in

→ Finance · payable & ITC

→ Quality · debit note

→ Sourcing · risk updated

← Planning · requirements

← Marketplace · order pull

Accepted — not ordered — is what counts

You order 100 metres. 100 arrive. Quality accepts 96. Most systems increase stock by 100 and claim tax credit on 100. Medhava increases stock by **96**, claims input tax credit on **96**, raises a debit note for the 4 rejected, and lowers that supplier's accept rate — automatically.

Nothing derived is ever stored

Outstanding, risk, performance, ageing, profit per product — all recomputed on read. They cannot drift out of step with the documents underneath them.

MODULES & APPS

15 modules. 65 apps. One login.

Each module is a complete area of your business. Turn on what you need today — everything else is already wired for the day you need it.

- Labels & Documents

Marketplace OMS

Every marketplace and every storefront in one order queue — Amazon, Flipkart, Myntra, Meesho, Ajio, Nykaa and JioMart alongside Shopify, WooCommerce, Magento, Wix and your own custom site. The stages each channel really uses — to accept, to pack, ready to dispatch, handed over, in transit — with the right cut-off counting down on every order, because a quick-commerce or air-shipped order is not due at the same hour as a standard one. Priority orders first, the day grouped by product so one item is picked once instead of once per parcel.

Manual Data Check

Upload the sheets you already download — marketplace orders and returns, and your own counter-shop registers, one file or a whole ZIP — and read ten cross-checks back: money, month, item, state, returns, claims, ads, payouts and GST. Every figure is clickable down to the transactions behind it, and the whole result downloads as Excel.

Claims & Disputes

Turn shortfalls, weight disputes and lost parcels into filed claims with evidence — and answer them before the clock runs out. A claim that is awaiting your response is worth money; one closed for no response is worth nothing, so the days remaining sit on the screen next to the amount.

Order Management

One pipeline from new to delivered, whether the order came from a seller panel, your Shopify or WooCommerce site, a dealer or the counter.

Reconciliation

Match every marketplace payout to the order line that earned it, and expose the gap.

Returns / RMA

Customer, courier and wrong returns — and the dead stock they actually cost you.

Channels & Storefronts

Connect a channel once and it stays in step: catalogue out, price out, stock out, orders in. Seven marketplaces and any website platform — Shopify, WooCommerce, Magento, BigCommerce, Wix or a custom site over its own API — each switchable without touching your data. Shopsy and any other storefront a channel runs alongside its main one counts as its own channel here. Where a channel has no open interface, its own downloaded report is a first-class way in. A channel may also know you by a different trading name — that is a label on the channel, not a second company, so it tags the order and the payout without ever splitting your books.

Labels & Documents

The channel gives you a PDF; this turns it into something a packer can work from. Cropped to your label size, your own product code printed large where the channel left it off, the invoice and the packing slip merged behind it, and the whole batch sent to the label printer in one job. Reprint a single parcel without redoing the batch — and nothing is ever uploaded to an outside website to be cropped.

Pick right the first time — and prove what you sent

Bin-level instructions and barcode scanning, so the right item leaves the building and stock stays honest — and a recording of each parcel being packed, so an argument about what was in it is settled by footage instead of by memory.

Picking & Bins

Pick lists that tell staff exactly which bin to walk to, in walking order.

Barcode Operations

Scan to pick, pack, dispatch and run a physical stock count from a phone — the same scan whether the order came from a marketplace, your Shopify site or the counter.

Packing Video

Every parcel recorded as it is packed and indexed by its order number, so a wrong-item claim is answered with the clip. The footage attaches itself to the claim that needs it.

Logistics

MODULE 06

4 APPS

The courier network itself — rates, failures and the COD money

Booking one parcel happens on the order, in Sales. This module is the network behind it: what every courier charges before you pick one, what happens to a delivery that fails, and whether the cash collected at the door actually reached your bank.

Rates & Zones

NDR & RTO Rescue

COD Remittance

Handover & Manifest

Rates & Zones

Every courier's rate card by zone, weight slab and service — so the cheapest and the fastest option for this parcel are both known before it is booked.

COD Remittance

What the courier collected at the door against what reached your bank, parcel by parcel, with every shortfall named and aged.

NDR & RTO Rescue

A failed delivery worked while it can still be saved — reattempt, call, correct the address — before it becomes a return you pay for twice.

Handover & Manifest

What is expected out today against what the courier actually took, counted per courier and per service. The manifest to hand over, the one-time code to confirm it, and a signed record of the parcels that were left behind — so a parcel lost between your table and their van has an owner.

Codes mapped on every live channel

95%

Size and weight on file

98%

Stock

Live quantity by SKU, location and stage, with reorder alerts, batches, kits and dead-stock. Goods you still own but that sit in a channel's own warehouse are a location like any other, so consignment and sale-or-return stock is counted, valued and aged with everything else instead of disappearing off the books until it sells.

Catalog / PIM

One product record — attributes, images, HSN, MRP and the price each channel actually sells at — pushed to every marketplace and to your own storefront, and scored for each channel's rules before it lists. It also holds the two things everything downstream depends on: the code each channel knows this product by, mapped to yours, and the packed size and weight that decide the courier rate and settle every weight dispute. Every listing's state on every channel is here too — live, waiting for your approval, blocked, archived — with the quality score that decides whether anyone sees it.

Manufacturing

MODULE 08

6 APPS

Know what a unit really costs to make

From the first operation to the finished unit — including what every worker earned and what each product actually cost. You define the stages, the rates and the rules; nothing here is fixed to one trade.

81%

Accounting

Double-entry books where every voucher balances and the trial balance always ties.

Expenses

Spend captured by category with approvals, and bill OCR to save typing.

Finance Reports

P&L, balance sheet, and profit by channel, product and SKU.

Invoicing

GST tax invoices and receipts, totals computed from the lines to the pause. Where a channel raises its own invoice, both numbers live on the order — theirs and yours — so the panel's paperwork and your books point at the same sale and neither has to be re-keyed to find the other.

GST & Tax

CGST, SGST, IGST, TDS, TCS, input credit, GSTR-1 and GSTR-3B.

Settlement

MODULE 12

3 APPS

Get paid what you are owed — cycle by cycle

Matching one payout to one order line happens in OMS. This module is the level above it: the settlement cycles each panel runs, the fees it actually charged against the fees it published, and the tax it deducted on your behalf.

READS FROM

E-commerce / OMS

WRITES TO

Accounting & GST

Accounting & GST

Payout Cycles

Fee & Commission Audit

TCS & TDS Register

Payout Cycles

Every settlement cycle each panel runs — what it should pay, what actually landed in the bank, and on which day — so a late payout is visible the day it is late, not at month end.

TCS & TDS Register

Every rupee the panels deducted as TCS and TDS, matched against the portal's own figures — so the credit you claim is the credit you are actually owed.

Fee & Commission Audit

The rate card a channel publishes against the rate it actually charged, category by category and SKU by SKU. A silent commission increase is caught the first time it is applied — and the tier you are rated in is on the same screen, because the tier is what the rate card hangs off, and losing one quietly costs more than any single deduction.

Marketing

MODULE 13

5 APPS

Sell more without discounting

Plan content, run campaigns, and let rules keep your prices competitive while protecting margin.

Content Engine
Fourteen stages in your own voice, from buyer research and competitor reading through hooks, channel-ready listings, ads, social posts, video scripts, song lyrics, the publishing calendar and alt text — each written from your own catalogue, so the words match the thing.

Image Studio
Layers, free transform, background removal, channel presets and SEO alt text — a phone photo becomes a channel-compliant product image.

Video Studio
Text and image to video, reels and ad cuts sized for every channel.

Design Studio
A full design surface — templates, layers, undo and redo, any colour, exact sizing, background images and stock elements — exporting PNG, JPG or PDF at whatever size the channel or the printer asks for.

Publisher
One push sends the finished listing, picture and copy everywhere it has to appear — your storefront, each marketplace, each social account — and reports back what actually went live and what was rejected, with the reason.

Projects & Collaboration MODULE 15 5 APPS

The work that is not an order — and the talking around it

Not every business runs on orders. A law firm runs on cases, an agency on engagements, a workshop on jobs, a builder on sites. This module holds that work on the same records as everything else, so the time, the cost, the documents and the decisions attached to it end up in the books rather than in somebody's inbox.

Live matters · a practice, not a production line

Projects & Cases

A project, a case file, an engagement or a job — whatever your work is called. Stages you define, owners, deadlines, documents, billable time and real cost, all on one record the ledger can see.

Timesheets & Planning

Who is on what this week, and the hours that actually went in — against a project, a case, a job or a machine. Billable and non-billable separated, so a rate card turns straight into an invoice and a real cost.

Approvals

One queue for everything waiting on a yes — a purchase order, a discount, a leave day, a credit note, a payment. The rule that sent it there is on the screen next to it, and the decision goes to the audit record.

Discuss

Conversation attached to the record it is about: this order, this bill, this case. A year later the reason for a decision is still sitting next to the decision.

Forum

Questions and answers that outlive a chat — for customers, dealers or staff — with the useful ones kept where the next person will actually find them.

Ask & Print (phone)	Ledger · bill · slips	Nothing at all	Never

Actions carrying a named user

100%

Documents sent out need a one-time code

100%

Ask & Print

Ask from your phone, anywhere: a ledger, a bill, today's packing slips. It comes back as a PDF — or prints on the office printer, with nothing plugged into your phone.

BUILT DEEP, NOT WIDE

The controls that pay for the software

Three-way match

A supplier bill only passes when the purchase order, the goods receipt and the invoice agree on price and quantity. Bills that over-charge or over-bill rejected goods are held automatically, with the reason in plain language.

Vendor risk that sees ahead

Risk blends weak performance, spend concentration and overdue bills. Your *best* supplier still flags medium risk when 44% of your buying sits with them — the fact worth knowing before a disruption, not after.

Settlement reconciliation

Import a marketplace settlement, match it to the orders, and see every commission, TCS deduction, weight discrepancy and short payment — with a claim pack ready to file.

Piece-rate and contractor pay

Pooled completion, per-unit rates, rework hours and advances roll into one payout for anyone paid by output rather than by the hour — and into a true cost per unit for every product.

One stock number

One quantity per SKU per location per stage, pushed to every channel. Overselling stops being a monthly apology.

AI studio built in

Listings, ad copy, product photography and reels generated against your own catalogue — not a bolted-on chatbot, but the same data core.

INDUSTRIES

One engine, any industry

Every app ships in two builds: a neutral unified-ERP configuration, and an industry configuration. The engine, formulas and tests are identical — only the master data differs.

Textile & apparel

Mills and trim suppliers, fabric in metres and pieces in numbers on one item master, piece-rate pay, design-wise costing, HSN 5007/5208, marketplace returns and wrong-return dead stock.

Medical & pharma

Distributors, batch and expiry tracking, QC pass rate as accept rate, cold-chain locations, and a regulated document trail nobody can quietly edit.

Manufacturing

Component suppliers, multi-level BOM, fill rate driving line stoppages, work orders, scrap and rework accounted where they happen.

Services

Subcontractors, milestone acceptance in place of goods receipt, timesheets, retainer billing and project profitability.

Drone & precision

Serial and lot tracking to the individual unit, calibration as a production stage you define, and certification paperwork filed against the batch it belongs to.

Law firms

A matter instead of an order: hearings, filings, opposing parties and e-signed engagement letters on one record. Time against the matter becomes the bill.

Chartered accountants

Clients, engagements and statutory deadlines in one calendar; staff hours costed per engagement; the practice's own books kept in the same system.

Trading & export

Multi-warehouse stock with one number, credit limits and ageing per buyer, commercial invoice, LUT bond and IGST refund — plus every channel in one queue.

COMPARISON

Medhava vs. a suite of integrated apps

The difference is architectural, not cosmetic.

CAPABILITY	MEDHAVA	TYPICAL SUITE
Architecture	One app, one data core	Many apps, integrated
Master data	Single Item & Party record	Duplicated per app, synced
Stock truth	One number per SKU × location	Per-app, reconciled nightly
Cross-module posting	Instant, via event bus	Scheduled sync jobs
Marketplace settlement	Reconciled to order line + claim pack	Usually a separate tool
Piece-rate manufacturing	Built in	Custom development
AI content & imaging	Native, on your catalogue	Third-party add-on
Offline capability	Single-file apps run offline	Cloud-only

TRUST & SECURITY

Your credentials are never the key

Scoped keys only

Marketplace, bank and courier connections use revocable, scoped API keys held in an AES-256-GCM vault. Medhava never asks for, uses or stores an account password.

Isolation by row

Every record carries a company id and is enforced by PostgreSQL row-level security. Group companies stay separate but consolidate on demand.

Immutable audit

Every posting, price change and permission grant is written to an append-only trail with actor, timestamp and before/after values.

Three categories of software. Nobody sells all three.

You are not short of tools. You are short of one tool that covers all of it —
which is why the numbers never agree.

Accounting & ERP suites

Tally · BUSY · Marg · Zoho · Odoo

- ✓ Books, GST, stock, purchase
- ✓ Manufacturing, payroll
- ✗ No marketplace order queue
- ✗ No settlement reconciliation or claims
- ✗ No content, image or video studio

Marketplace OMS platforms

Unicommerce · EliteSecom · SmartHub

- ✓ Panel orders in one queue
- ✓ Inventory sync, settlement
- ✗ No double-entry books, no GST return
- ✗ No manufacturing, purchase or payroll
- ✗ No content, image or video studio

AI content tools

Writing · image · video generators

- ✓ Copy, pictures, reels
- ✗ Knows nothing about your catalogue
- ✗ No orders, no stock, no books
- ✗ Nothing publishes to a channel
- ✗ Nothing reconciles afterwards

Medhava

All three, over one data core

- ✓ Books, GST, stock, purchase, manufacturing, payroll
- ✓ Marketplace and storefront order queue
- ✓ Settlement, claims, returns, packing footage
- ✓ Content, image, design and video studio
- ✓ One record underneath all of it

In an accounting package you will never get a marketplace OMS. In an OMS you will never get your books. In a content tool you will never get either. That is the gap. Medhava is built in it.

THE APPROACH

Built deep, not wide

A long feature list is easy. What is hard is the one control that stops the money leaking — so every module ships with one, and refuses rather than warns.

01

Accepted, not ordered

You order 100. 100 arrive. Quality accepts 96. Most systems raise stock by 100 and claim tax credit on 100. Medhava raises stock by 96, claims credit on 96, raises a debit note for the 4, and lowers that supplier's accept rate. Automatically.

02

The payout, to the order line

Not "the channel paid ₹49.1 lakh". Which order line was short, by how much, against which published commission rate — with the claim pack already assembled and the packing footage attached.

03

Nothing derived is stored

Outstanding, ageing, promise dates, payouts, on-time percentage and risk are recomputed every time you read them. A stored number goes stale the moment the document under it changes. These cannot.

PRICING

Start free. Pay when it runs your business.

Per company. Two of the 15 modules — E-commerce / OMS and the AI Content Engine — are priced on what you actually use, because an order is work and a piece of content is work.

Talk to sales

E-commerce / OMS & AI Content Engine

These two are metered, the way every serious order-management platform prices. You pay for orders that actually shipped and content that was actually produced — not for a seat that sat idle.

E-commerce / OMS

PER ORDER PROCESSED

ORDERS A MONTH	PER ORDER	INCLUDED
Up to 1,000	₹2.50	All channels, settlement, returns
1,001 - 10,000	₹1.80	+ claims desk, packing footage
10,001 - 50,000	₹1.40	+ multi-warehouse routing
Above 50,000	On request	+ dedicated throughput
An order is counted once, when it is dispatched. A cancelled or unshipped order is never billed.		

AI Content Engine

PER PIECE PRODUCED

WHAT IS PRODUCED	COUNTS AS	RATE
Channel listing (title, bullets, description)	1 content	₹6
Social post, caption or ad variation	1 content	₹4
Product image · background, resize, preset	1 content	₹3
Reel or video cut, per finished clip	1 content	₹25
Bring your own model key and the rate drops to the platform fee alone — no lock-in, ever.

QUESTIONS

Frequently asked

What is Medhava?

Medhava is a unified ERP made of 15 modules and 65 apps that all read and write one shared data core — Item/SKU, Party, Stock, Ledger and Order. Because the data is shared, a single action such as a goods receipt updates stock, the ledger, quality records and the vendor scorecard at the same time.

How is Medhava different from Zoho or Odoo?

Does Medhava support Indian GST?

Which marketplaces does Medhava connect to?

Can Medhava be used outside textiles?

Is my data safe?

Can I use it without internet?

How long does implementation take?

Stop reconciling. Start running.

See your own numbers inside Medhava. Bring one month of sales, purchases and stock — we will show you what your current tools are hiding.

Purchase is live — Procurement + Vendor Management →

Run your whole business on one system

Medhava replaces the eleven tools you run today — accounting, stock, marketplace orders, manufacturing, staff and GST — with one application where every number agrees with every other one. Record a goods receipt once, and your stock, your books, your quality record and your supplier score all move in the same instant.

15

Modules, one login

65

Apps over one data core

1

Stock number for every SKU

7

Marketplaces connected

WHAT MEDHAVA IS

One application. Not eleven that talk to each other.

Every other suite sells you separate products and a sync job between them. Medhava is a single application over one set of records — so there is nothing to synchronise, and nothing to reconcile.

1

Enter it once

A goods receipt, a counter sale, a marketplace order — recorded in one place. Stock, the ledger, the quality record and the supplier scorecard all update in the same instant, because they are reading the same record.

2

Numbers that cannot disagree

One stock figure per SKU. One ledger. One order record. Not a copy per channel that somebody reconciles on Saturday. When the website says four are left, four are left.

3

Built for how India actually runs

GST with input credit on accepted goods, TDS and TCS, seven marketplaces, piece-rate and output-based wages — and apps that keep working when the internet does not.

WHAT CHANGES FOR YOU

The same day, before and after

Nothing here is a new way to run your business. It is the work you already do, arranged so that it only has to be done once.

TODAY

- ✗ Log into seven seller panels, one at a time
- ✗ Copy each order into a sheet, then into the books
- ✗ Guess which stock figure is the real one
- ✗ Learn at month-end that a mill over-billed you
- ✗ Chase a marketplace shortfall you spotted six weeks late
- ✗ Ask three people for their file before you can see one number

WITH MEDHAVA

- ✓ One queue, sorted by whichever order is closest to being late
- ✓ The order writes itself into stock and into the ledger
- ✓ There is one stock figure, so there is nothing to choose between
- ✓ An over-billed invoice cannot be paid — the match refuses it
- ✓ Every shortfall is on a screen the day the payout lands
- ✓ Open the dashboard. It was already up to date.

Medhava at a glance

What it is	A unified ERP: 15 modules and 65 apps sharing one data core and one event bus.
Shared data core	Item/SKU · Party · Stock · Ledger & Voucher · Order — every module reads and writes these.
Key difference	Not a suite of integrated apps. One application, so there is no sync step and no duplicate master data.
Compliance	Double-entry accounting with CGST/SGST/IGST, TDS, TCS, ITC on accepted goods, GSTR-1 and GSTR-3B.
Channels	Amazon, Flipkart, Myntra, Meesho, Ajio, Nykaa, JioMart, plus Shopify and WooCommerce.
Security	PostgreSQL row-level security per company; integrations use revocable scoped API keys in an AES-256-GCM vault — never account passwords.
Deployment	Hosted multi-tenant cloud, or single-file offline apps that run by double-clicking with no install.

Your business runs on eleven tools that don't talk

Accounting in one place, stock in a spreadsheet, marketplace orders in seven seller panels, contractor wages in a notebook. Every month-end becomes an archaeology project.

Numbers that disagree

Stock says 40, the marketplace says 12, the books say something else again. Nobody knows which is right, so everyone guesses.

Work entered three times

The same invoice keyed into the seller panel, the spreadsheet and the accounting package. Three chances to be wrong.

Money quietly leaking

Over-billed purchases, unclaimed marketplace shortfalls, RTO losses — invisible until the year is over.

One data core. One action cascades everywhere.

Every module reads and writes the same five entities. That is the physical reason a single goods receipt can touch stock, books, quality and sourcing at the same instant.

UNIFIED DATA CORE

Item / SKU

Party

Stock

Ledger

Order

→ Inventory · stock in

→ Finance · payable & ITC

→ Quality · debit note

→ Sourcing · risk updated

← Planning · requirements

← Marketplace · order pull

Accepted — not ordered — is what counts

You order 100 metres. 100 arrive. Quality accepts 96. Most systems increase stock by 100 and claim tax credit on 100. Medhava increases stock by **96**, claims input tax credit on **96**, raises a debit note for the 4 rejected, and lowers that supplier's accept rate — automatically.

Nothing derived is ever stored

Outstanding, risk, performance, ageing, profit per product — all recomputed on read. They cannot drift out of step with the documents underneath them.

15 modules. 65 apps. One login.

Each module is a complete area of your business. Turn on what you need today — everything else is already wired for the day you need it.

Marketplace OMS

Every marketplace and every storefront in one order queue — Amazon, Flipkart, Myntra, Meesho, Ajio, Nykaa and JioMart alongside Shopify, WooCommerce, Magento, Wix and your own custom site. The stages each channel really uses — to accept, to pack, ready to dispatch, handed over, in transit — with the right cut-off counting down on every order, because a quick-commerce or air-shipped order is not due at the same hour as a standard one. Priority orders first, the day grouped by product so one item is picked once instead of once per parcel.

Order Management

One pipeline from new to delivered, whether the order came from a seller panel, your Shopify or WooCommerce site, a dealer or the counter.

Manual Data Check

Upload the sheets you already download — marketplace orders and returns, and your own counter-shop registers, one file or a whole ZIP — and read ten cross-checks back: money, month, item, state, returns, claims, ads, payouts and GST. Every figure is clickable down to the transactions behind it, and the whole result downloads as Excel.

Reconciliation

Match every marketplace payout to the order line that earned it, and expose the gap.

Claims & Disputes

Turn shortfalls, weight disputes and lost parcels into filed claims with evidence — and answer them before the clock runs out. A claim that is awaiting your response is worth money; one closed for no response is worth nothing, so the days remaining sit on the screen next to the amount.

Returns / RMA

Customer, courier and wrong returns — and the dead stock they actually cost you.

Channels & Storefronts

Connect a channel once and it stays in step: catalogue out, price out, stock out, orders in. Seven marketplaces and any website platform — Shopify, WooCommerce, Magento, BigCommerce, Wix or a custom site over its own API — each switchable without touching your data. Shopsy and any other storefront a channel runs alongside its main one counts as its own channel here. Where a channel has no open interface, its own downloaded report is a first-class way in. A channel may also know you by a different trading name — that is a label on the channel, not a second company, so it tags the order and the payout without ever splitting your books.

Labels & Documents

The channel gives you a PDF; this turns it into something a packer can work from. Cropped to your label size, your own product code printed large where the channel left it off, the invoice and the packing slip merged behind it, and the whole batch sent to the label printer in one job. Reprint a single parcel without redoing the batch — and nothing is ever uploaded to an outside website to be cropped.

Pick right the first time — and prove what you sent

Bin-level instructions and barcode scanning, so the right item leaves the building and stock stays honest — and a recording of each parcel being packed, so an argument about what was in it is settled by footage instead of by memory.

MTR-1750	Marketplace B	—	—	unmapped

Codes mapped on every live channel

95%

Size and weight on file

98%

Stock

Live quantity by SKU, location and stage, with reorder alerts, batches, kits and dead-stock. Goods you still own but that sit in a channel's own warehouse are a location like any other, so consignment and sale-or-return stock is counted, valued and aged with everything else instead of disappearing off the books until it sells.

Catalog / PIM

One product record — attributes, images, HSN, MRP and the price each channel actually sells at — pushed to every marketplace and to your own storefront, and scored for each channel's rules before it lists. It also holds the two things everything downstream depends on: the code each channel knows this product by, mapped to yours, and the packed size and weight that decide the courier rate and settle every weight dispute. Every listing's state on every channel is here too — live, waiting for your approval, blocked, archived — with the quality score that decides whether anyone sees it.

Manufacturing

MODULE 08

6 APPS

Know what a unit really costs to make

From the first operation to the finished unit — including what every worker earned and what each product actually cost. You define the stages, the rates and the rules; nothing here is fixed to one trade.

PLM & Development

First idea to something you can actually make: specification, sample rounds, costed trials and sign-off, with every version kept. A product, a machined part, a formulation or a service package all move through stages you set yourself.

Production Orders

Your own stages from first operation to finished goods, with work-in-progress visible at each one.

Piece-rate & Contractors

Output-based pay for anyone paid by the piece rather than the hour — pooled completion, per-unit rates, rework and advances resolved into a single payout.

BOM & Consumption

What each product consumes, costed at today's material rates.

Quality Control

Accept, reject or rework — with reasons that feed the supplier scorecard.

Maintenance

Machines, tools and assets: what is due for service, when it was last done, what it cost, and what stopped while it was down. Planned and breakdown work against the same asset record.

-  Finance Reports

Accounting

Double-entry books where every voucher balances and the trial balance always ties.

Expenses

Spend captured by category with approvals, and bill OCR to save typing.

Finance Reports

P&L, balance sheet, and profit by channel, product and SKU.

Invoicing

GST tax invoices and receipts, totals computed from the lines to the pause. Where a channel raises its own invoice, both numbers live on the order — theirs and yours — so the panel's paperwork and your books point at the same sale and neither has to be re-keyed to find the other.

GST & Tax

CGST, SGST, IGST, TDS, TCS, input credit, GSTR-1 and GSTR-3B.

Settlement

MODULE 12

3 APPS

Get paid what you are owed — cycle by cycle

Matching one payout to one order line happens in OMS. This module is the level above it: the settlement cycles each panel runs, the fees it actually charged against the fees it published, and the tax it deducted on your behalf.

63%

Payout Cycles

Fee & Commission Audit

TCS & TDS Register

Payout Cycles

Every settlement cycle each panel runs — what it should pay, what actually landed in the bank, and on which day — so a late payout is visible the day it is late, not at month end.

TCS & TDS Register

Every rupee the panels deducted as TCS and TDS, matched against the portal's own figures — so the credit you claim is the credit you are actually owed.

Fee & Commission Audit

The rate card a channel publishes against the rate it actually charged, category by category and SKU by SKU. A silent commission increase is caught the first time it is applied — and the tier you are rated in is on the same screen, because the tier is what the rate card hangs off, and losing one quietly costs more than any single deduction.

Priced above floor everywhere

98%

Posts published on schedule

93%

Social Calendar
Plan and publish across every channel from one calendar.

Repricing Engine
Rules per channel and SKU — floor, ceiling, match-lowest, festival overrides — and what each change actually did. A price that went up and took the orders down with it shows as exactly that, next to the rule that raised it, so the rule can be reversed on evidence rather than on a feeling.

Blog & Pages
Articles, landing pages and category copy written, scheduled and published straight to your own site — Shopify, WooCommerce, Magento or a custom CMS — with the meta title, description and internal links set before it goes out.

Campaigns
Email, SMS and WhatsApp campaigns measured on real revenue, not opens.

Automation
If this happens, do that — across any module, without writing code.

 AI Content Engine

MODULE 14

5 APPS

Write it, shoot it, cut it — from the catalogue you already have

Listings, ads, email, product photography and reels, all generated from your own catalogue — so the words match the product and the picture is the right size for the channel it is going to. Words, images and video sit in one module because they are one job.

Written from real catalogue data

100%

Published in one push

96%

Content Engine
Fourteen stages in your own voice, from buyer research and competitor reading through hooks, channel-ready listings, ads, social posts, video scripts, song lyrics, the publishing calendar and alt text — each written from your own catalogue, so the words match the thing.

Image Studio
Layers, free transform, background removal, channel presets and SEO alt text — a phone photo becomes a channel-compliant product image.

Video Studio
Text and image to video, reels and ad cuts sized for every channel.

Design Studio
A full design surface — templates, layers, undo and redo, any colour, exact sizing, background images and stock elements — exporting PNG, JPG or PDF at whatever size the channel or the printer asks for.

Publisher
One push sends the finished listing, picture and copy everywhere it has to appear — your storefront, each marketplace, each social account — and reports back what actually went live and what was rejected, with the reason.

 Projects & Collaboration

MODULE 15

5 APPS

The work that is not an order — and the talking around it

Not every business runs on orders. A law firm runs on cases, an agency on engagements, a workshop on jobs, a builder on sites. This module holds that work on the same records as everything else, so the time, the cost, the documents and the decisions attached to it end up in the books rather than in somebody's inbox.

Live matters · a practice, not a production line

Projects & Cases

A project, a case file, an engagement or a job — whatever your work is called. Stages you define, owners, deadlines, documents, billable time and real cost, all on one record the ledger can see.

Approvals

One queue for everything waiting on a yes — a purchase order, a discount, a leave day, a credit note, a payment. The rule that sent it there is on the screen next to it, and the decision goes to the audit record.

Discuss

Conversation attached to the record it is about: this order, this bill, this case. A year later the reason for a decision is still sitting next to the decision.

Timesheets & Planning

Who is on what this week, and the hours that actually went in — against a project, a case, a job or a machine. Billable and non-billable separated, so a rate card turns straight into an invoice and a real cost.

Forum

Questions and answers that outlive a chat — for customers, dealers or staff — with the useful ones kept where the next person will actually find them.

Actions carrying a named user

100%

Documents sent out need a one-time code

100%

Ask & Print

Ask from your phone, anywhere: a ledger, a bill, today's packing slips. It comes back as a PDF — or prints on the office printer, with nothing plugged into your phone.

BUILT DEEP, NOT WIDE

The controls that pay for the software

Three-way match

A supplier bill only passes when the purchase order, the goods receipt and the invoice agree on price and quantity. Bills that over-charge or over-bill rejected goods are held automatically, with the reason in plain language.

Vendor risk that sees ahead

Risk blends weak performance, spend concentration and overdue bills. Your *best* supplier still flags medium risk when 44% of your buying sits with them — the fact worth knowing before a disruption, not after.

Settlement reconciliation

Import a marketplace settlement, match it to the orders, and see every commission, TCS deduction, weight discrepancy and short payment — with a claim pack ready to file.

Piece-rate and contractor pay

Pooled completion, per-unit rates, rework hours and advances roll into one payout for anyone paid by output rather than by the hour — and into a true cost per unit for every product.

One stock number

One quantity per SKU per location per stage, pushed to every channel. Overselling stops being a monthly apology.

AI studio built in

Listings, ad copy, product photography and reels generated against your own catalogue — not a bolted-on chatbot, but the same data core.

INDUSTRIES

One engine, any industry

Every app ships in two builds: a neutral unified-ERP configuration, and an industry configuration. The engine, formulas and tests are identical — only the master data differs.

Textile & apparel

Mills and trim suppliers, fabric in metres and pieces in numbers on one item master, piece-rate pay, design-wise costing, HSN 5007/5208, marketplace returns and wrong-return dead stock.

Medical & pharma

Distributors, batch and expiry tracking, QC pass rate as accept rate, cold-chain locations, and a regulated document trail nobody can quietly edit.

Manufacturing

Component suppliers, multi-level BOM, fill rate driving line stoppages, work orders, scrap and rework accounted where they happen.

Services

Subcontractors, milestone acceptance in place of goods receipt, timesheets, retainer billing and project profitability.

Drone & precision

Serial and lot tracking to the individual unit, calibration as a production stage you define, and certification paperwork filed against the batch it belongs to.

Law firms

A matter instead of an order: hearings, filings, opposing parties and e-signed engagement letters on one record. Time against the matter becomes the bill.

Chartered accountants

Clients, engagements and statutory deadlines in one calendar; staff hours costed per engagement; the practice's own books kept in the same system.

Trading & export

Multi-warehouse stock with one number, credit limits and ageing per buyer, commercial invoice, LUT bond and IGST refund — plus every channel in one queue.

COMPARISON

Medhava vs. a suite of integrated apps

The difference is architectural, not cosmetic.

CAPABILITY	MEDHAVA	TYPICAL SUITE
Architecture	One app, one data core	Many apps, integrated
Master data	Single Item & Party record	Duplicated per app, synced
Stock truth	One number per SKU × location	Per-app, reconciled nightly
Cross-module posting	Instant, via event bus	Scheduled sync jobs
Marketplace settlement	Reconciled to order line + claim pack	Usually a separate tool
Piece-rate manufacturing	Built in	Custom development
AI content & imaging	Native, on your catalogue	Third-party add-on
Offline capability	Single-file apps run offline	Cloud-only

TRUST & SECURITY

Your credentials are never the key

Scoped keys only

Marketplace, bank and courier connections use revocable, scoped API keys held in an AES-256-GCM vault. Medhava never asks for, uses or stores an account password.

Isolation by row

Every record carries a company id and is enforced by PostgreSQL row-level security. Group companies stay separate but consolidate on demand.

Immutable audit

Every posting, price change and permission grant is written to an append-only trail with actor, timestamp and before/after values.

THE GAP

Three categories of software. Nobody sells all three.

You are not short of tools. You are short of one tool that covers all of it —
which is why the numbers never agree.

Accounting & ERP suites

Tally · BUSY · Marg · Zoho · Odoo

- ✓ Books, GST, stock, purchase
- ✓ Manufacturing, payroll
- ✗ No marketplace order queue
- ✗ No settlement reconciliation or claims
- ✗ No content, image or video studio

Marketplace OMS platforms

Unicommerce · EliteSecom · SmartHub

- ✓ Panel orders in one queue
- ✓ Inventory sync, settlement
- ✗ No double-entry books, no GST return
- ✗ No manufacturing, purchase or payroll
- ✗ No content, image or video studio

AI content tools

Writing · image · video generators

- ✓ Copy, pictures, reels
- ✗ Knows nothing about your catalogue
- ✗ No orders, no stock, no books
- ✗ Nothing publishes to a channel
- ✗ Nothing reconciles afterwards

Medhava

All three, over one data core

- ✓ Books, GST, stock, purchase, manufacturing, payroll
- ✓ Marketplace and storefront order queue
- ✓ Settlement, claims, returns, packing footage
- ✓ Content, image, design and video studio
- ✓ One record underneath all of it

In an accounting package you will never get a marketplace OMS. In an OMS you will never get your books. In a content tool you will never get either. That is the gap. Medhava is built in it.

THE APPROACH

Built deep, not wide

A long feature list is easy. What is hard is the one control that stops the money leaking — so every module ships with one, and refuses rather than warns.

01

Accepted, not ordered

You order 100. 100 arrive. Quality accepts 96. Most systems raise stock by 100 and claim tax credit on 100. Medhava raises stock by 96, claims credit on 96, raises a debit note for the 4, and lowers that supplier's accept rate. Automatically.

02

The payout, to the order line

Not "the channel paid ₹49.1 lakh". Which order line was short, by how much, against which published commission rate — with the claim pack already assembled and the packing footage attached.

03

Nothing derived is stored

Outstanding, ageing, promise dates, payouts, on-time percentage and risk are recomputed every time you read them. A stored number goes stale the moment the document under it changes. These cannot.

PRICING

Start free. Pay when it runs your business.

Per company. Two of the 15 modules — E-commerce / OMS and the AI Content Engine — are priced on what you actually use, because an order is work and a piece of content is work.

Talk to sales

E-commerce / OMS & AI Content Engine

These two are metered, the way every serious order-management platform prices. You pay for orders that actually shipped and content that was actually produced — not for a seat that sat idle.

E-commerce / OMS

PER ORDER PROCESSED

ORDERS A MONTH	PER ORDER	INCLUDED
Up to 1,000	₹2.50	All channels, settlement, returns
1,001 – 10,000	₹1.80	+ claims desk, packing footage
10,001 – 50,000	₹1.40	+ multi-warehouse routing
Above 50,000	On request	+ dedicated throughput
An order is counted once, when it is dispatched. A cancelled or unshipped order is never billed.		

AI Content Engine

PER PIECE PRODUCED

WHAT IS PRODUCED	COUNTS AS	RATE
Channel listing (title, bullets, description)	1 content	₹6
Social post, caption or ad variation	1 content	₹4
Product image · background, resize, preset	1 content	₹3
Reel or video cut, per finished clip	1 content	₹25
Bring your own model key and the rate drops to the platform fee alone — no lock-in, ever.

QUESTIONS

Frequently asked

What is Medhava?

Medhava is a unified ERP made of 15 modules and 65 apps that all read and write one shared data core — Item/SKU, Party, Stock, Ledger and Order. Because the data is shared, a single action such as a goods receipt updates stock, the ledger, quality records and the vendor scorecard at the same time.

How is Medhava different from Zoho or Odoo?

Does Medhava support Indian GST?

Which marketplaces does Medhava connect to?

Can Medhava be used outside textiles?

Is my data safe?

Can I use it without internet?

How long does implementation take?

Stop reconciling. Start running.

See your own numbers inside Medhava. Bring one month of sales, purchases and stock — we will show you what your current tools are hiding.
