

MEDHAVA

What is inside MEDHAVA_BOS.zip

All 428 files, every one of them, with what each file says it is. Not a selection and not a summary of the interesting ones — the list below is the complete contents of the archive, and a checker opens the real zip and fails the build if a single entry is in one and not in the other.

How to read this

Files in the archive	428
Total size on disk	18.6 MB
Files whose description was read out of the file itself	311
Data files described by their own top-level keys	15
Images, fonts and rendered PDFs — no readable header	69
Files carrying no description at all, named below	30

Nothing in the "what it is" column was written about a file. Each line was read *out of* the file — the header comment a source file opens with, the first heading of a document, the top-level keys of a data file. A file that carries no description is reported as carrying none rather than given a guess, because a gap that says so can be closed and a guess cannot be found.

This archive is the product with no customer inside it. It builds, tests and runs with zero tenants installed — checked by extracting it into an empty directory, running `npm ci`, and running `npm run test:product` there.

Where the files are, and what each area is for

Area	Files	Size
Start here	2	—
The delivered documents	28	1.5 MB
The data core — the part every module reads and writes	27	375 KB
The application that runs on the core	18	211 KB
The registers — the lists everything else is derived from	70	1.3 MB
The document generators and the archive builders	61	3.4 MB
The earlier prototype app line	184	10.0 MB
Logos, fonts and the brand sheet	16	1.4 MB
Deployment, tooling and the build	22	381 KB

Start here

2 files · —. Written by the archive builder at the moment the archive was made. These are the first things to open: one names the commands that run everything else, the other says which of these files are worth reading and what each costs to read.

File	What it says it is	Size
READ_FIRST.md	The reading order, priced. Which files in this archive are worth opening, which are generated output to skip, and roughly what each costs to read.	—
START_HERE.md	Written into the archive when it is built — what this is, and the commands that run it.	—

The delivered documents

28 files · 1.5 MB. The reading matter — the plan, the design argued, the runbook, the rulebook, the audits, and this contents list. Each .md has a .pdf beside it rendered from the same source, so the two cannot disagree.

File	What it says it is	Size
AUDIT_REPORT.md	Written under the anti-cheat protocol now installed at .claude/skills/anti-cheat-protocol/SKILL.md .	9 KB
BENCHMARK_GAPS.md	30 parameters across 11 dimensions.	34 KB
BUILD_QUEUE.md	8 tasks, in order, each an independently verifiable vertical slice.	18 KB
CLAUDE.md	0 · MEDHAVA IS THE PRODUCT.	22 KB
CONSTRAINTS.md	85 lines of the specification need something a repository cannot hold.	17 KB
CURRENT_STATE_AUDIT.md	What is actually in this repository, counted at the moment this file was generated.	11 KB
DEPLOYMENT.md	This describes a design. It is how the platform is deployed and run once it is built.	15 KB
GAP_ANALYSIS.md	What is missing, what it holds up, and which gaps can be closed from inside this repository at all.	13 KB
HANDOFF.md	You are one of several models working on this repository.	5 KB
MASTER_SPEC_COVERAGE.md	945 line items across 31 sections.	8 KB
MEDHAVA_ARCHITECT.md	What this system is, and why it is shaped this way.	54 KB
MEDHAVA_BOS.SKILL.md	You are building a platform: one piece of software that many separate businesses use at the same time, each seeing only its own information, each seeing it in its own words.	11 KB
MEDHAVA_BOS_PROMPT.md	Build the platform. Paste this at the start of the session.	21 KB
MEDHAVA_BUILD_GUIDE.md	How this platform is designed and built.	187 KB
MEDHAVA_CONTENTS.md	Every file in this archive, with what each one says it is — the document you are reading.	—
MEDHAVA_HOW_TO_BUILD.md	Start here if you have just downloaded MEDHAVA_BOS.zip .	23 KB
MEDHAVA_PLAN_OF_ACTION.md	One business operating system.	185 KB
Medhava_BOS.md	One Business Operating System.	506 KB
Medhava_Build_Roadmap.md	Everything, in one file: the ten stages from idea to launch, then all 22 modules, all 113 apps and all 293 rules in full — each rule with what the system does, what it refuses to do instead, and the...	226 KB
PARITY_PLAN.md	Ordered so it can be worked from the top.	14 KB
PRODUCT_CAPABILITY_MATRIX.md	Every one of the 113 apps, under its module, with the rung it has reached and the 0–5 score that rung translates to.	15 KB
REQUIREMENTS_REGISTRY.md	One row per capability, the rung it has reached, and the thing that proves it.	36 KB
SETUP_CHECKLIST.md	8 steps, in the order they should happen.	14 KB
SEVEN_STAGE_ROADMAP.md	Your seven, in your order, with your numbering.	15 KB
SPEC_CONFLICTS.md	10 places where the supplied specifications say two different things — sometimes across documents, more often inside one.	27 KB
START_HERE_OWNER.md	This is the first thing to open.	3 KB
WORKING_WITH_AI_TOOLS.md	Read this before your next session rather than when a limit runs out.	5 KB
ZOHO_CAPABILITY_BENCHMARK.md	The 56 products the owner supplied, in his order, and what this project has against each.	21 KB

The data core — the part every module reads and writes

27 files · 375 KB. The database schema, the money arithmetic, the ledger, stock, the audit trail and the trade packs. Nothing above it works without it, and the isolation test here is the single check that one company cannot read another's rows.

File	What it says it is	Size
<code>core/audit.js</code>	The audit trail. There is no way to switch it off, and that is the point.	5 KB
<code>core/db.js</code>	The one database.	4 KB
<code>core/events.js</code>	The cascade bus.	5 KB
<code>core/ledger.js</code>	The posting engine. One function.	11 KB
<code>core/logs.js</code>	Effective-dated logs — ported rule for rule from the tenant engine's Python implementation, which is where the behaviour below was worked out and is tested against a real payroll.	9 KB
<code>core/money.js</code>	Money — integer paise, never a float.	6 KB
<code>core/packs.js</code>	THE INDUSTRY PACK ENGINE — a trade is a row, not a fork.	22 KB
<code>core/packs/construction.json</code>	keys: id, name, sector, rank, why, vocabulary, plurals, stages (+4 more)	6 KB
<code>core/packs/education.json</code>	keys: id, name, sector, rank, why, vocabulary, plurals, stages (+4 more)	5 KB
<code>core/packs/field-service.json</code>	keys: id, name, sector, rank, why, vocabulary, plurals, stages (+4 more)	5 KB
<code>core/packs/healthcare-clinic.json</code>	keys: id, name, sector, rank, why, vocabulary, plurals, stages (+4 more)	4 KB
<code>core/packs/hospitality-food.json</code>	keys: id, name, sector, rank, why, vocabulary, plurals, stages (+4 more)	5 KB
<code>core/packs/logistics-3pl.json</code>	keys: id, name, sector, rank, why, vocabulary, plurals, stages (+4 more)	5 KB
<code>core/packs/manufacturing.json</code>	keys: id, name, sector, rank, why, vocabulary, plurals, stages (+4 more)	5 KB
<code>core/packs/professional-services.json</code>	keys: id, name, sector, rank, why, vocabulary, plurals, stages (+4 more)	4 KB
<code>core/packs/retail-ecommerce.json</code>	keys: id, name, sector, rank, why, vocabulary, stages, fields (+3 more)	4 KB
<code>core/packs/wholesale-distribution.json</code>	keys: id, name, sector, rank, why, vocabulary, plurals, stages (+4 more)	4 KB
<code>core/partv.js</code>	PART V's 43 TABLES — where each one went, and why.	17 KB
<code>core/schema.postgres.sql</code>	<i>no description in the file itself</i>	105 KB
<code>core/schema.sql</code>	<i>no description in the file itself</i>	13 KB
<code>core/stock.js</code>	Stock — one quantity per SKU, per location, per stage.	7 KB
<code>core/tenant.js</code>	WHAT THIS BUSINESS CHANGED AFTER THE PACK — the layer the documents promised and the engine did not have.	11 KB
<code>core/tests/core.test.js</code>	The core's self-tests.	32 KB
<code>core/tests/live.test.js</code>	THE SCHEMA, RUN RATHER THAN READ.	18 KB
<code>core/tests/packs.test.js</code>	THE GATE ON THE INDUSTRY PACK ENGINE.	30 KB
<code>core/tests/partv.test.js</code>	PART V's 43 TABLES, ASKED OF A REAL DATABASE.	15 KB
<code>core/tests/schema.test.js</code>	The gate on the production schema.	18 KB

The application that runs on the core

18 files · 211 KB. The server, the screens and their tests — the part a person actually signs in to. This is the smallest of the code areas, which is an honest picture of where the project is: the design is large and the built part is not.

File	What it says it is	Size
medhava/package.json	keys: name, private, description, scripts	243 B
medhava/seed/demo.js	TWO BUSINESSES THAT LOOK NOTHING ALIKE, ON ONE CODEBASE.	13 KB
medhava/server/api.js	THE API — every business request carries a tenant and a company, or it is refused.	13 KB
medhava/server/auth.js	SESSIONS — kept deliberately small, and deliberately not clever.	1 KB
medhava/server/db.js	THE DATABASE, AND THE ONE LINE THAT DECIDES WHETHER ISOLATION EXISTS.	9 KB
medhava/server/index.js	THE MEDHAVA SERVER.	5 KB
medhava/server/inventory.js	MODULE 03 · INVENTORY — the one stock number, and the rule that keeps it honest.	7 KB
medhava/server/purchase.js	MODULE 07 · PURCHASE — buying, which is the half of a working day this platform did not have.	17 KB
medhava/server/sales.js	MODULE 05 · SALES — the write side, and the first place this platform creates a business record.	16 KB
medhava/test/day.test.js	ONE WORKING DAY, END TO END — the test the maturity level rests on.	11 KB
medhava/test/inventory.test.js	MODULE 03 · INVENTORY — the one stock number, asked of a running database.	13 KB
medhava/test/isolation.test.js	THE SLICE, ASKED RATHER THAN ASSERTED.	24 KB
medhava/test/purchase.test.js	MODULE 07 · PURCHASE — buying, asked of a running database.	12 KB
medhava/test/sales.test.js	MODULE 05 · SALES — the rules, asked of a running database.	21 KB
medhava/test/shell.test.js	THE SHELL, DRIVEN IN A REAL BROWSER.	17 KB
medhava/web/app.js	The shell. Deliberately plain JavaScript — no build step, no framework, nothing to install.	22 KB
medhava/web/index.html	Medhava — Business Operating System	1 KB
medhava/web/style.css	Medhava — the platform shell.	7 KB

The registers — the lists everything else is derived from

70 files · 1.3 MB. Modules, apps, rules, tools, the stack, the requirements registry, and the checkers that gate them. No count in any document here is typed: it is read from one of these files, which is why the counts have changed twice without a document going stale.

File	What it says it is	Size	
brand/site/INDEX.md	A unified ERP: 21 modules and 113 apps over one shared data core.	49 KB	
brand/site/architect.js	THE ARCHITECT — what Medhava IS, and why it is that.	27 KB	
brand/site/audit.js	THE AUDIT REGISTER — the score, the maturity level, and what to build next.	28 KB	
brand/site/backlog.js	THE BACKLOG — the 109 lines of the master specification this product does not name at all.	14 KB	
brand/site/benchmark.js	THE PARAMETERS — every dimension this product is measured on, and the gap on each.	36 KB	
brand/site/bottom.html	FLAGSHIP FEATURES	23 KB	
brand/site/build.js	Medhava — builds the COMPLETE website (index.html) with every module and every app from modules.js as real web sections, then renders it to a PDF that looks like the website.	53 KB	
brand/site/built.js	WHICH APPS ACTUALLY EXIST — one list, because two lists disagree.	7 KB	
brand/site/checkaudit.js	THE AUDIT REGISTER, CHECKED.	11 KB	
brand/site/checkbacklog.js	THE BACKLOG, CHECKED AGAINST THE SHEET THAT PRODUCED IT.	8 KB	
brand/site/checkbenchmark.js	THE PARAMETERS REGISTER, CHECKED — because a benchmark is the easiest document to fake.	16 KB	
brand/site/checkcompetitor.js	NOTHING MEDHAVA SHIPS NAMES A COMPETITOR.	10 KB	
brand/site/checkconflicts.js	THE CONFLICT REGISTER, CHECKED.	11 KB	
brand/site/checkcontents.js	THE CONTENTS DOCUMENTS, CHECKED AGAINST THE ACTUAL ZIP FILES.	24 KB	
brand/site/checkcoverage.js	EVERY DELIVERED DOCUMENT, MEASURED AGAINST EVERY REGISTER.	9 KB	
brand/site/checkedition.js	NO MEDHAVA-NAMED ARTEFACT MAY CARRY A TRADE WORD.	9 KB	
brand/site/checkhandover.js	THE HANDOVER PACK, CHECKED — because this one is read by somebody who cannot check it.	9 KB	
brand/site/checkmasterspec.js	THE MASTER-SPEC COVERAGE REGISTER, CHECKED.	13 KB	
brand/site/checkneutral.js	The gate on the neutral edition.	14 KB	
brand/site/checkprivacy.js	NOBODY REAL IS NAMED IN A TRACKED FILE, AND NO TRACKED FILE PAIRS A PERSON WITH MONEY.	13 KB	
brand/site/checkregistry.js	THE TRUTH REGISTRY, CHECKED — the gate that refuses a status nothing proves.	10 KB	
brand/site/checkroadmap.js	THE ROADMAPS, CHECKED — the one document pair that publishes build state.	9 KB	
brand/site/checkrules.js	The gate on the rulebook.	5 KB	
brand/site/checksets.js	TWO TABLES DESCRIBE THE SAME GARMENTS.	8 KB	
brand/site/checkshape.js	THE STRUCTURAL NEUTRALITY GATE — does this platform have the SHAPE of one trade?	10 KB	
brand/site/checksite.js	THE PUBLISHED SITE, DRIVEN — not inspected.	7 KB	
brand/site/checkstack.js	THE GATE ON RULE 1 — no capability depends on one tool.	5 KB	
brand/site/checkstatic.js	NOTHING IS STATIC — CHECKED, NOT PROMISED.	10 KB	
brand/site/checktools.js	The gate on the tools register.	5 KB	
brand/site/checkzoho.js	THE CAPABILITY BENCHMARK, CHECKED.	8 KB	
brand/site/conflicts.js	WHERE THE SPECIFICATION CONTRADICTS ITSELF — recorded, not resolved.	23 KB	
brand/site/describe.js	WHAT EACH FILE SAYS IT IS — read from the file, never typed about it.	10 KB	
brand/site/dynamic.js	RULE 2 — NOTHING IS STATIC, AND THE PAST STAYS CORRECT.	13 KB	
brand/site/editions.js	WHICH EDITIONS ARE INSTALLED — asked once, in one place.	3 KB	
brand/site/guide.js	THE BUILD GUIDE — how this platform is designed and built.	68 KB	
brand/site/guidefmt.js	ONE FORMATTER, TWO RUNBOOKS.	5 KB	
brand/site/handover.js	THE SEVEN STAGES, IN THE OWNER'S OWN ORDER AND HIS OWN NUMBERING.	13 KB	
brand/site/head.html	__PRODUCT__ — One business. One brain. \	Unified ERP with __NAPP__ apps	6 KB
brand/site/howto.js	HOW TO BUILD MEDHAVA — the path from a downloaded archive to a working app.	23 KB	
brand/site/llms.txt	<i>no description in the file itself</i>	6 KB	
brand/site/logo.js	THE MEDHAVA MARK — drawn to the brand sheet, in one place.	4 KB	
brand/site/masterspec.js	THE OWNER'S MASTER BUILD PROMPT, ENCODED — and what this product has against each line.	55 KB	

File	What it says it is	Size
brand/site/mkcounts.js	The counts in MEDHAVA_PLAN_OF_ACTION.md, derived rather than typed.	7 KB
brand/site/mkdiagrams.js	THE MODULE MAP, DERIVED — not drawn by hand.	7 KB
brand/site/mkindex.js	Builds INDEX.md — the whole website as one plain-text page you can read, search or send.	12 KB
brand/site/mkregisters.js	Inject the remaining registers into the plan of action, between markers.	6 KB
brand/site/mkrulebook.js	Inject the full rulebook into a document, between markers.	2 KB
brand/site/mkrules.js	Put the rulebook into PLAN_OF_ACTION.md — and nothing else into it.	10 KB
brand/site/modules.js	THE canonical list. The website, every PDF, INDEX.md, llms.txt and the structural audit all	45 KB
brand/site/plainwords.js	PLAIN WORDS — every technical term explained once, the same way, everywhere.	14 KB
brand/site/prompts.js	THE TWO MASTER BUILD PROMPTS, AS DATA.	32 KB
brand/site/reach.js	WHO EACH APP IS ACTUALLY FOR — the register that makes structural bias visible.	12 KB
brand/site/registers.js	EVERY REGISTER, MEASURED THE SAME WAY — and rendered from one implementation.	12 KB
brand/site/registry.js	THE TRUTH REGISTRY — one row per capability, and what proves it.	22 KB
brand/site/roadmap.js	THE TEN STAGES — idea to launch, and what each one owes.	18 KB
brand/site/rulebook.js	THE RULEBOOK, RENDERED — one implementation, every document.	2 KB
brand/site/rules.js	THE RULEBOOK — the canonical list, in the same spirit as modules.js.	107 KB
brand/site/sectors.js	WHICH TRADES THIS PLATFORM ACTUALLY SERVES — the join between what the website SHOWS and what the engine can CONFIGURE.	7 KB
brand/site/setup.js	WHAT TO BUY AND SWITCH ON, IN ORDER — the owner's own stack, sequenced.	11 KB
brand/site/shots.js	ONE LIVE-LOOKING SCREEN PER MODULE — the neutral edition.	32 KB
brand/site/site.css	TOKENS — from the Medhava mark Teal → blue → violet, with a gold star.	48 KB
brand/site/skills.js	THE TWO SKILLS, AS DATA.	26 KB
brand/site/stack.js	THE STACK — every technical layer, its default, and what it can be replaced with.	18 KB
brand/site/tenant.js	THE TENANT GUIDE — one business on the platform, in full.	61 KB
brand/site/tenantbuild.js	THE TENANT BUILD GUIDE — one business, from signing up to running live.	46 KB
brand/site/tools.js	THE TOOLS REGISTER — free first, paid only when something forces it.	12 KB
brand/site/top.html	__HERO_H1__	11 KB
brand/site/uishot.js	THE LIVE-LOOKING PRODUCT SCREEN — one renderer, used everywhere.	2 KB
brand/site/walkthrough.js	THE WALKTHROUGH — the content, once, for two very different renderers.	15 KB
brand/site/zoho.js	THE CAPABILITY BENCHMARK — one row per product the owner named, and what this one has.	24 KB

The document generators and the archive builders

61 files · 3.4 MB. Every delivered document is written by a script in here, from the registers above. To change a document you change its generator or its register, never the document — a hand-edit is overwritten the next time anything is built.

The PDFs, in a separate archive

24 documents · `MEDHAVA_PDF.zip`. These are not in `MEDHAVA_BOS.zip` and that is deliberate. The archive states its own total size in the note inside it; this page cannot, because one of the files below is the PDF of this page.

Each one is rendered from a markdown file of the same name, and that markdown IS in this archive. So for anything reading the archive to build the software, the PDF was a second copy of a document it reads worse — and between them they were nearly half the archive's size. They ship in `MEDHAVA_PDF.zip` instead, for reading.

If a PDF and its markdown ever disagree, the markdown is right. The PDF is rendered from it, so a PDF saying something different is an older rendering. In the repository `node brand/site/checkcoverage.js` fails the build when a PDF is older than its own source.

Where a file in this archive still names one business

10 of the 428 descriptions below quote a file whose own header names a particular trade. They are not redacted, because every description on this page is the file's own words and a tidied quotation would be a different claim from the one the file makes. They are listed instead:

- brand/site/checksets.js
- brand/suite/out/14_Production/guide.md
- brand/suite/studio/build_studio.js
- brand/suite/studio/motion_render.js
- brand/suite/studio/skill_runner.js
- brand/suite/studio/studio_core.js
- brand/suite/studio/studio_dashboard.js
- brand/suite/studio/studio_reports.js
- brand/suite/studio/studio_ui.js
- brand/suite/studio/verify_studio.js

All but one are in the earlier prototype app line, which is committed build output from before the product and the customer were separated. The build reports the same thing every time it runs it. The product's own engine — everything under `core/` and `medhava/` — contains none, and that is the ring that has to be empty.

The files that describe themselves, and the ones that do not

30 files in this archive carry no description of any kind — no header comment, no title, nothing readable at the top. They are named here rather than given a sentence somebody invented, and adding a header to any of them is a real improvement to the file rather than to this document:

- `brand/delivery/Brand/medhava-icon.svg` — 682 B, a drawing — no title element to read
- `brand/delivery/Brand/medhava-mark-white.svg` — 407 B, a drawing — no title element to read
- `brand/delivery/Brand/medhava-mark.svg` — 649 B, a drawing — no title element to read
- `brand/identity/medhava-appicon.svg` — 877 B, a drawing — no title element to read
- `brand/identity/medhava-favicon.svg` — 877 B, a drawing — no title element to read
- `brand/identity/medhava-final-mark.svg` — 1 KB, a drawing — no title element to read
- `brand/identity/medhava-icon.svg` — 682 B, a drawing — no title element to read
- `brand/identity/medhava-mark-white.svg` — 534 B, a drawing — no title element to read
- `brand/identity/medhava-mark.svg` — 752 B, a drawing — no title element to read

The 69 images, fonts and rendered PDFs are not in that list. A PNG has no header to read, and the most a contents page can honestly say about one is its name and its size, which it does.

How to check this document is true

Do not take its word for it. From the repository:

```
node brand/site/checkcontents.js --summary
```

That opens both built archives and compares them entry by entry against these documents. It fails if the archive holds a file this page does not list, if this page lists a file the archive does not hold, if a stated count is not the length of its own list, or if a description here is not text that really occurs in the file it describes.

Every technical word above, in plain language

17 words. Every technical term this document uses, in plain language, with an everyday comparison. Nothing here assumes you already know any of them.

platform

One piece of software that many separate businesses use at the same time, each seeing only its own information.

Ek badi building jisme bahut saare offices hain. Building ek hai, par har office ki chaabi alag — koi kisi aur ke office mein nahin ghus sakta.

tenant

One business using the platform. Its people, its data and its settings are its own.

Us building mein ek office. Aapka office, aapka saamaan, aapka taala.

module

One area of work in the system — sales, purchase, staff, accounts. Each is a set of screens that belong together.

Dukaan ke alag-alag counters. Ek counter bikri ka, ek kharidi ka, ek hisaab-kitaab ka.

industry pack

A settings file that teaches the system your trade — what you call things, the stages your work moves through, the documents you issue.

Ek hi machine, alag-alag saancha. Saancha badal do, wahi machine doosri cheez banane lagti hai.

database

Where all the information is kept, arranged so any of it can be found instantly and nothing gets lost.

Ek badi almari jisme har cheez apne fix khaane mein rakhi hai — dhoondhne ke liye poori almari palatni nahin padti.

table

One kind of information inside the database — all your customers in one, all your orders in another.

Almari ka ek khaana. Ek khaane mein sirf customers, doosre mein sirf orders.

row

One single record — one customer, one order, one payment.

Register mein ek line. Ek line matlab ek entry.

schema

The written plan of what information the system keeps and how the pieces connect.

Makaan ka naksha. Deewar uthane se pehle kaagaz pe tay hota hai kaunsa kamra kahaan hai.

backup

A copy of everything, kept somewhere else, so a mistake or a failure does not lose your work.

Zaroori kaagzaat ki photocopy, doosri jagah rakhi hui. Asli jal jaaye toh bhi kaam nahin rukta.

integer paise

Money stored as a whole number of paise instead of a decimal, so amounts are exact and rounding can never quietly lose a rupee.

Paisa hamesha poore paise mein ginte hain, aadha-adhoora kabhi nahin — isliye hisaab kabhi ek rupya idhar-udhar nahin hota.

audit trail

An automatic record of every change — what changed, who changed it, and when.

Har entry ke saath naam aur time apne aap likha jaata hai. Baad mein koi bole "maine nahin kiya", toh register bata deta hai.

API

The agreed way two pieces of software talk to each other, so one can ask the other for something and get a predictable answer.

Waiter. Aap kitchen mein nahin jaate — waiter ko order dete ho, wahi khaana le aata hai. Waiter badal jaaye toh bhi order dene ka tarika wahi rehta hai.

queue

A waiting line for work that does not have to finish this second — sending a hundred messages, building a big report.

Darzi ki dukaan ka parchi system. Kaam parchi pe likh ke lag gaya line mein; customer khada intezaar nahin karta.

job

One piece of work taken off the queue and done in the background.

Line mein se uthayi gayi ek parchi, ab uska kaam ho raha hai.

deployment

Putting a new version of the software in place so people start using it.

Nayi dukaan kholna ya purani ko naya roop dena — jab tak shutter nahin uthta, customer ko farq nahin padta.

model

The piece of artificial intelligence that reads or writes text, tags a photograph, or answers a question.

Ek bahut padha-likha assistant. Kaam accha karta hai, par har baat pe usse poochho toh kharcha aur waqt dono lagta hai.

provider

A company whose service the system uses — for messages, for payments, for artificial intelligence, for delivery.

Supplier. Ek supplier maal na de toh doosre se le lo — kaam nahin rukna chahiye.
