24. AIO — llms.txt & AI answerability
25. Responsive behaviour
26. Design system
27. Performance & accessibility
28. Copy deck
29. Launch checklist

How to use this document. Part 1 shows the page exactly as it renders, section by section, with the intent and the copy behind each. Part 2 documents the technical layer — the markup, schema and content strategy that make the page rank in search and get quoted by AI assistants.

Page architecture & flow

The homepage answers five questions in order: **what is it, is it real, how does it work, does it fit me, what does it cost**. Every section exists to move a visitor one step further down that list.

01 Header — orient & escape hatch

03 Proof bar — scale in four numbers

05 Problem — name their pain

07 Modules — all 16, all 40 apps

09 Industries — does it fit me

11 Security — can I trust it

13 FAQ — the last objections

15 Footer — sitemap & SEO surface

02 Hero — what it is, in one line

04 Key facts — the AI-quotable definition

06 How it works — the architecture

08 Features — the controls that pay

10 Comparison — vs. a suite

12 Pricing — what does it cost

14 CTA — the ask

Conversion path

Hero CTA → Modules → Pricing → Demo. Three of the four CTAs above the fold point at "Book a demo"; the fourth points at Modules for visitors who need proof before a conversation.

Reading path

Someone who reads only the H1, the four stats and the Key Facts block — about nine seconds — still leaves knowing what Medhava is and how it differs.

Header & navigation

Sticky, translucent with a blur, 70px tall. It carries the full brand lockup — mark, wordmark and tagline — so the promise is visible on every scroll position.

The header: brand lockup, six section links, and a two-tier call to action

Structure

Logo → 6 anchor links → Sign in (secondary) + Book a demo (primary). Nav links underline on hover from left to right.

Mobile

Below 1000px the links and both buttons collapse into a hamburger, keeping the brand lockup readable at 390px.

SEO note. The header is a `<header>` containing `<nav aria-label="Primary">`. Anchor links to in-page sections give search engines the "jump to section" sitelinks that appear under a result.

Hero / banner

The single most important block on the site. The H1 **is** the tagline, so the brand promise and the page's primary keyword target are the same string.

NEW

Domain 9 · Purchase is live — Procurement + Vendor Management

One business. One brain.

Medhava is a unified ERP — 16 modules, 40 apps, one shared data core. Record a goods receipt once and stock, your ledger, quality and the vendor scorecard all move together. No sync jobs. No duplicate masters. No spreadsheet holding it together.

Hero: announcement pill, H1, positioning paragraph, dual CTA, trust micro-copy and a live product mockup

Copy

H1:

One business. One brain.

Sub:

"Medhava is a unified ERP — 16 modules, 40 apps, one shared data core..."

Visual

A real Vendor Management screen, not a stock illustration — payables, overdue count and live supplier risk. Tilted on a 3D transform that straightens on hover.

Proof bar

Four numbers that make the architecture concrete before any explanation is attempted.

Four-number proof bar

Why these four

16

modules and

40

apps establish scope.

1

stock number is the differentiator in a single digit.

7

marketplaces proves Indian commerce fit.

Placement

Immediately under the hero, on a tinted band, so it reads as a continuation of the headline rather than a separate claim.

Key facts block

A definition list written specifically to be **lifted verbatim** by an AI assistant answering "what is Medhava?" — see page 23.

Medhava at a glance	
What it is	A unified ERP: 16 modules and 40 apps sharing one data core and one event bus.
Shared data core	Item/SKU · Party · Stock · Ledger & Voucher · Order — every module reads and writes these.
Key difference	Not a suite of integrated apps. One application, so there is no sync step and no duplicate master data.
Compliance	Double-entry accounting with CGST/SGST/IGST, TDS, TCS, ITC on accepted goods, GSTR-1 and GSTR-3B.
Channels	Amazon, Flipkart, Myntra, Meesho, Ajio, Nykaa, JioMart, plus Shopify and WooCommerce.
Security	PostgreSQL row-level security per company; integrations use revocable scoped API keys in an AES-256-GCM vault — never account passwords.
Deployment	Hosted multi-tenant cloud, or single-file offline apps that run by double-clicking with no install.

The AI-quotable "Medhava at a glance" definition block

This block is the highest-leverage content on the page. Generative engines prefer short, factual, attributable statements in `<dl>` form over marketing prose. Seven definitions cover what it is, the data core, the differentiator, compliance, channels, security and deployment.

Problem section

Named in the customer's language, not the vendor's. No feature is mentioned — only the daily experience of running a business on disconnected tools.

THE PROBLEM

Your business runs on eleven tools that don't talk

Accounting in one place, stock in a spreadsheet, marketplace orders in seven seller panels, karigar wages in a notebook. Every month-end becomes an archaeology project.

Numbers that disagree

Stock says 40, the marketplace says 12, the books say something else again. Nobody knows which is right, so everyone guesses.

Work entered three times

The same invoice keyed into the seller panel, the spreadsheet and the accounting package. Three chances to be wrong.

Money quietly leaking

Over-billed purchases, unclaimed marketplace shortfalls, RTO losses — invisible until the year is over.

Three problem cards: numbers that disagree, triple entry, and silent leakage

Headline

"Your business runs on eleven tools that don't talk"

Why it works

Each card describes a symptom the reader has personally experienced this month. Recognition earns the right to explain the architecture on the next page.

How it works

The architectural claim, made visually. This is the section that justifies the word *unified*.

HOW IT WORKS

One data core. One action cascades everywhere.

Every module reads and writes the same five entities. That is the physical reason a single goods receipt can touch stock, books, quality and sourcing at the same instant.

Goods receipt → Stock +96 → Payable + ITC → Debit note → Scorecard

UNIFIED DATA CORE

Item / SKU

Party

Stock

Ledger

Order

→ Inventory · stock in

→ Finance · payable & ITC

→ Quality · debit note

→ Sourcing · risk updated

← Planning · requirements

← Marketplace · order pull

Accepted — not ordered — is what counts

You order 100 metres. 100 arrive. Quality accepts 96. Most systems increase stock by 100 and claim tax credit on 100. Medhava increases stock by 96, claims input tax credit on 96, raises a debit note for the 4 rejected, and lowers that mill's accept rate — automatically.

Nothing derived is ever stored

Outstanding, risk, performance, aging, profit-per-design — all recomputed on read. They cannot drift out of step with the documents underneath them.

The data core, the cascade flow, and the two rules that follow from it

The cascade

Goods receipt → Stock +96 → Payable + ITC → Debit note → Scorecard. Five modules reacting to one fact.

The two rules

Accepted — not ordered — is what counts. And nothing derived is ever stored, so no figure can drift from its documents.

Total: 40 apps. Plus a platform spine used by every module — Identity & RBAC, Settings, Documents, Notifications and an immutable audit trail.

Flagship features

Six capabilities chosen because each one, alone, can pay for the software in a year.

 One business. One brain.

ModulesHow it worksIndustriesComparePricingFAQ

Sign inBook a demo

BUILT DEEP, NOT WIDE

The controls that pay for the software

Three-way match

A supplier bill only passes when the purchase order, the goods receipt and the invoice agree on price and quantity. Bills that over-charge or over-bill rejected goods are held automatically, with the reason in plain language.

Vendor risk that sees ahead

Risk blends weak performance, spend concentration and overdue bills. Your *best* supplier still flags medium risk when 44% of your buying sits with them — the fact worth knowing before a disruption, not after.

Settlement reconciliation

Import a marketplace settlement, match it to the orders, and see every commission, TCS deduction, weight discrepancy and short payment — with a claim pack ready to file.

Karigar piece-rate

Pooled set completion, per-garment rates, alteration hours and advances roll into each artisan's payout — and into true cost-per-piece for every design.

One stock number

One quantity per SKU per location per stage, pushed to every channel. Overselling stops being a monthly apology.

AI studio built in

Listings, ad copy, product photography and reels generated against your own catalogue — not a bolted-on chatbot, but the same data core.

Six flagship capability cards

Three-way match

A bill passes only when PO, goods receipt and invoice agree. Mismatches held with the reason in plain language.

Vendor risk

Your best supplier still flags medium risk at 44% spend concentration — the fact worth knowing before a disruption.

Industries

The same engine, four master-data configurations. This section exists to stop "is this only for textiles?" becoming a lost lead.

INDUSTRIES

One engine, any industry

Every app ships in two builds: a neutral unified-ERP configuration, and an industry configuration. The engine, formulas and tests are identical — only the master data differs.

Textile & apparel

Mills and zari suppliers, fabric in metres, karigar piece-rate, design-wise costing, HSN 5007/5208, marketplace returns and wrong-return dead stock.

Medical & pharma

Distributors, batch and expiry tracking, QC pass rate as accept rate, cold-chain locations, regulated document trails.

Manufacturing

Component suppliers, multi-level BOM, fill rate driving line stoppages, work orders, scrap and rework accounting.

Services

Subcontractors, milestone acceptance in place of goods receipt, timesheets, retainer billing and project profitability.

Four industry cards: textile, medical, manufacturing, services

The claim is literally true of the code. Every app ships in two builds — a neutral unified-ERP configuration and an industry configuration — sharing one engine and one identical test suite. Only the master data differs.

Comparison table

Eight rows against "a typical suite". Comparison tables are the format generative engines quote most often, so this doubles as GEO content.

COMPARISON

Medhava vs. a suite of integrated apps

The difference is architectural, not cosmetic.

CAPABILITY	MEDHAVA	TYPICAL SUITE
Architecture	One app, one data core	Many apps, integrated
Master data	Single Item & Party record	Duplicated per app, synced
Stock truth	One number per SKU x location	Per-app, reconciled nightly
Cross-module posting	Instant, via event bus	Scheduled sync jobs
Marketplace settlement	Reconciled to order line + claim pack	Usually a separate tool
Piece-rate manufacturing	Built in	Custom development
AI content & imaging	Native, on your catalogue	Third-party add-on
Offline capability	Single-file apps run offline	Cloud-only

Eight-row comparison of Medhava against a typical integrated suite

Positioning discipline. The table never names a competitor as inferior — it contrasts *architectures*. That keeps the claim defensible and avoids trademark friction.

Security & trust

Placed before pricing, because in Indian SMB software the objection "will you have my marketplace password?" kills more deals than price does.

TRUST & SECURITY

Your credentials are never the key

Scoped keys only

Marketplace, bank and courier connections use revocable, scoped API keys held in an AES-256-GCM vault. Medhava never asks for, uses or stores an account password.

Isolation by row

Every record carries a company id and is enforced by PostgreSQL row-level security. Group companies stay separate but consolidate on demand.

Immutable audit

Every posting, price change and permission grant is written to an append-only trail with actor, timestamp and before/after values.

Three trust cards: scoped keys, row-level isolation, immutable audit

The headline is the promise: "Your credentials are never the key." Integrations use revocable scoped API keys in an AES-256-GCM vault. Medhava never asks for, uses or stores an account password.

Pricing

Three tiers, per company, billed annually. Every plan includes all sixteen modules.

QUESTIONS

Frequently asked

What is Medhava?

×

Medhava is a unified ERP made of 16 modules and 40 apps that all read and write one shared data core — Item/SKU, Party, Stock, Ledger and Order. Because the data is shared, a single action such as a goods receipt updates stock, the ledger, quality records and the vendor scorecard at the same time.

How is Medhava different from Zoho or Odoo?

+

Does Medhava support Indian GST?

+

Which marketplaces does Medhava connect to?

+

Can Medhava be used outside textiles?

+

Is my data safe?

+

Can I use it without internet?

+

How long does implementation take?

+

Eight expandable questions

Dual purpose. For humans these are the last objections before a demo. For search and AI they are the most directly answerable content on the site — the FAQPage schema is what earns answer-box and AI-citation placement.

Closing CTA

One ask, stated as an offer rather than a request.

Full-width gradient call-to-action band

Copy: "Stop reconciling. Start running." — followed by a concrete, low-risk offer: bring one month of data and we will show you what your current tools are hiding.

Footer

A working sitemap, not decoration. Thirty-two app links across four themed columns.

Footer with brand block and four link columns

SEO value. The footer distributes internal link equity to every app page from every page on the site, and the four column headings — Operations, Finance, Sell & grow, Company — mirror how buyers actually search.

SEO implementation

ELEMENT	IMPLEMENTATION	STATUS
Title tag	Medhava — One business. One brain. Unified ERP with 40 apps (61 chars)	✓
Meta description	153 characters, contains primary and secondary keywords	✓
Canonical	<link rel="canonical" href="https://medhava.com/">	✓
Robots	index, follow, max-image-preview:large, max-snippet:-1	✓
Heading order	Exactly one H1, ten H2, no skipped levels	✓
Semantic markup	header / nav / main / section / article / footer	✓
Internal links	59 links; 32 app links in the footer	✓
Image alt text	Every figure and role="img" element labelled	✓
Open Graph	og:type, site_name, title, description, url, locale	✓
Twitter card	summary_large_image	✓
Mobile	Verified 0px horizontal overflow at 390 / 820 / 1440	✓
Performance	Single file, zero external requests, no render-blocking	✓
Accessibility	Skip link, focus-visible rings, reduced-motion honoured	✓

Structured data

Five schema types in a single `@graph`, all validated.

TYPE	PURPOSE
Organization	Brand entity, slogan, areaServed, sales contact point. Feeds the knowledge panel.
WebSite	Site identity plus SearchAction — enables a sitelinks search box in Google.
SoftwareApplication	Category, operating systems, featureList of seven capabilities, AggregateOffer ₹0–₹24,999.
FAQPage	Six question/answer pairs. The highest-value schema on the page for AI citation.
BreadcrumbList	Position in the site hierarchy.

```
{
  "@context": "https://schema.org",
  "@graph": [
    {
      "@type": "Organization",
      "name": "Medhava",
      "slogan": "One business. One brain.",
      ...
    },
    {
      "@type": "WebSite",
      "potentialAction": {
        "@type": "SearchAction",

      ...
    }
  ]
}
```

GEO — generative engine optimisation

Search is no longer the only front door. When someone asks an AI assistant "what is the best unified ERP for an Indian D2C brand?", the page has to be **quotable**, not merely rankable.

TECHNIQUE	WHERE IT APPEARS
Definition block	"Medhava at a glance" — seven flat facts in a <dl>. Short, attributable, easy to quote.
Comparison table	Eight architectural rows. Tables survive summarisation better than prose.
Explicit Q&A	Eight FAQs whose wording matches how people actually ask the question.
Numeric specificity	16 modules, 40 apps, 7 marketplaces, ₹7,499. Numbers get quoted; adjectives do not.
Self-contained claims	Every sentence stands alone without its neighbours — an extracted line still makes sense.
Named entities	Amazon, Flipkart, Myntra, Meesho, Ajo, GST, GSTR-3B, PostgreSQL, Shopify — real anchors an engine can match.

The test: take any single paragraph out of the page, show it to someone cold, and they should still be able to say what Medhava is. The page is written so that is true everywhere.

AIO — llms.txt & AI answerability

A plain-text file at the site root, declared in the head, giving AI crawlers a clean summary without HTML noise.

```
# Medhava

> Medhava is a unified ERP: 16 modules and 40 apps that share one data core
> and one event bus. Tagline: One business. One brain.

## Key facts
- Modules: 16. Apps: 40. Data cores: 1.
- Input tax credit is computed on ACCEPTED quantity only, never ordered.
- Stock: one number per SKU per location per stage.
- Security: revocable scoped API keys in an AES-256-GCM vault; never passwords.

## The 16 modules
1. Dashboard & BI (2) ... 9. Purchase (2) [COMPLETE] ... 16. Video Studio (1)

## How Medhava differs from Zoho and Odoo
Zoho and Odoo are suites of separate applications connected by integrations.
Medhava is one application with 16 modules over one data core ...
```

Declared in the head

```
<link rel="alternate" type="text/plain"
href="/llms.txt">
```

Why it matters

Assistants that fetch a page get a canonical, unambiguous description instead of inferring one from marketing copy — which is how facts get garbled.

Responsive behaviour

Three breakpoints, all verified at zero horizontal overflow.

NEW

Typeface: **Poppins** for brand and headings, with a system fallback stack so the page renders identically offline. Gradient **135deg** **#19cba9** → **#0fae90** → **#0a7660** used for the mark, primary buttons and stat numerals only.

Performance & accessibility

Zero external requests

All CSS, SVG and script inline. No font CDN, no analytics blocking render, no layout shift from late-loading assets.

No JavaScript dependency

The page is fully readable with scripts disabled. JS only adds the mobile menu and scroll reveals.

Reduced motion

`prefers-reduced-motion` disables every animation and transition.

Keyboard

Skip-to-content link, visible focus rings on every interactive element, logical tab order.

Native disclosure

FAQ uses `<details> / <summary>` — screen-reader friendly with no ARIA needed.

Print

A print stylesheet strips navigation and CTAs so the page prints as a clean document.

Verified in a real browser at three viewports: zero console errors, zero horizontal overflow, all five JSON-LD blocks parse without error.

Copy deck

SECTION	HEADLINE
Hero	One business. One brain.
Proof	16 · 40 · 1 · 7
Key facts	Medhava at a glance
Problem	Your business runs on eleven tools that don't talk
How it works	One data core. One action cascades everywhere.
Modules	16 modules. 40 apps. One login.
Features	The controls that pay for the software
Industries	One engine, any industry
Compare	Medhava vs. a suite of integrated apps
Security	Your credentials are never the key
Pricing	Start free. Pay when it runs your business.
FAQ	Frequently asked
CTA	Stop reconciling. Start running.

Voice rules. Short sentences. Concrete nouns. No "leverage", "seamless", "empower" or "revolutionise". Every claim is one that the software can actually be shown doing in a demo.

Launch checklist

TASK	OWNER	STATUS
Homepage built, responsive, accessible	Done	✓ done
Structured data — 5 schema types validated	Done	✓ done
llms.txt written and linked	Done	✓ done
Copy deck approved	Done	✓ done
Register medhava.com + social handles	You	pending
Point DNS, install TLS	You	pending
Add real product screenshots as apps ship	Medhava	pending
Wire demo form to CRM	Medhava	pending
Google Search Console + sitemap.xml	You	pending
Per-app landing pages (40)	Medhava	pending
Case study with real Vastrangam numbers	Both	pending

Next step in the build. The homepage is the shell. The compounding SEO work is the **40 individual app pages**, each targeting its own keyword — "3-way matching software India", "karigar piece-rate payroll", "marketplace settlement reconciliation". Those pages are what actually rank.

Medhava — One business. One brain.
