

VASTRANGAM EDITION

CEO Dashboard

Did we make money · Is the cash safe · What needs me today

Module 01 · Dashboard & BI — App 1 of 4

Did the group make money this month, is cash safe, and what needs the owner today.

- One file · opens by double-click
- Works offline
- Reads everything, writes nothing
- 30 / 30 self-tests pass

What this is, and what is inside

The CEO Dashboard is the **one screen you look at each morning**. It answers three questions and nothing else: did we make money, is the cash safe, and what needs a decision today.

All three companies on one screen, together or one at a time. Marketplace sales after returns (returns are counted before profit, not after), the real profit once fabric, karigar wages and running costs are taken out, the live cash position, buyers who have not paid, mills waiting to be paid, fabric about to run out, and the karigar floor's output. Every figure is worked out from what the other modules already record — nothing is typed in twice.

It is a single HTML file. It opens by double-click, runs with the internet switched off, saves your work in the browser, and checks its own arithmetic **30 different ways** every time it starts.

What this document covers

1. What this is, and what is inside
2. Where this app sits
3. Screen · Overview
4. Overview, card by card
5. Proof that it is live — the period dial
6. The second dial — one company, or all of them
7. Screen · Sales & Channels
8. Screen · Money
9. Screen · Stock & Making
10. Screen · Companies
11. Screen · Alerts — the five rules
12. What "clearing" an alert does
13. Screen · Wiring
14. Every figure, and where it comes from
15. Connectors — nothing is locked to one company
16. The three rules the app enforces on itself
17. What this app can be wired to
18. The 30 self-tests, in full (1 of 2)
19. The 30 self-tests, in full (2 of 2)
20. How to run it, and what it will not do

Where this app sits

Every Medhava app stands on **one shared Data Core**: Item/SKU, Party, Stock, Ledger/Voucher and Order. Each module writes into it; Module 01 is the module that reads it.

What it reads, and from where

COMES FROM	WHAT IT SUPPLIES
E-commerce / OMS	Marketplace and website orders, returns and settlements
Procurement	Mill bills, fabric rates, payment terms
Inventory	Fabric metres, finished pieces, cost, reorder point
Manufacturing (karigar)	Pieces cut, stitched and finished; wages booked
Accounting & GST	Opening balances, rent, salaries, ad spend, courier, receipts and payments
Platform	Which companies exist, and which one you are looking at

All four apps of this module are built from one engine file and one screen file. Not four codebases that agree — one implementation, compiled four times. That is why the CEO Dashboard, a report and the group roll-up can never disagree about a figure, and why the fourth app in this module can honestly be all three at once.

Screen · Overview

The Overview screen. Five cards, the trend on the left, what needs a decision on the right.

Reading it in thirty seconds

- 1 Net profit** — did we earn? If it is green you are ahead; the percentage beside it tells you by how much of every rupee sold.
- 2 Cash + bank** — are we safe? A business can be profitable and still be unable to pay a mill on Friday. This is the number that answers that.
- 3 Open alerts** — what needs me? If it is zero, close the laptop. If it is not, the panel on the right already lists them, worst first, with a button that takes you to the screen where you can act.

Overview, card by card

Net sales

What you sold,
after returns have been taken off
. This is not the figure a marketplace dashboard shows you — theirs is gross.

Net profit

What is actually left: net sales – fabric and trims bought – wages – running costs. The percentage underneath is that profit as a share of net sales.

Cash + bank

Your real position right now. It does
not
change when you switch period — a balance is a balance, not "profit for June".

To collect

Everything the marketplaces and buyers still owe you, whatever its age.

Open alerts

How many things need a decision. Red the moment there is one.

Net sales by month

A bar per month with that month's profit beside it, the best month, and the four-month totals. The badge compares the newest month with the one before.

What you can click

- ▶ **Any period button** — April, May, June, July or Full year. Every figure on every screen is recalculated.
- ▶ **Any company button** — one company, or all of them together. Same effect: everything is worked out again.
- ▶ **"Open →" on any alert** — jumps straight to the screen where you can do something about it.

Read it in this order: **Net profit** first (did we earn?), then **Cash + bank** (are we safe?), then **Open alerts** (what needs me?). Thirty seconds, and you know where you stand.

Proof that it is live — the period dial

This is the same screen as two pages ago. Only one thing was clicked: the period changed from July to April.

April selected. Every card, both panels and the alert list have been recomputed.

What moved, and what deliberately did not

FIGURE	CHANGED?	WHY
Net sales	Yes	It is a period figure — this is what was sold in April.
Net profit & margin	Yes	Every line that builds it is filtered to April.
Cash + bank	No	A balance is a position, not a period. "Cash for April" is not a thing.
To collect	No	Money owed is owed today, whichever month it arose in.
Open alerts	Partly	Stock and payment alerts are about today. Return-rate alerts are recomputed for the period.

That distinction is the difference between a dashboard you can act on and one that quietly misleads you. Most spreadsheet dashboards filter everything by the date column, which turns a bank balance into nonsense.

The second dial — one company, or all of them

Same screen again, same period. This time one company was picked instead of the whole group.

One company selected. Flow figures AND balances are now that company's alone.

The company dial behaves differently from the period dial, on purpose. A balance ignores the period — but it does **not** ignore the company. "Cash in April" is nonsense; "Ethnic Fashion's cash" is a real number sitting in a real bank account.

Two dials, two rules

	PERIOD	COMPANY
Sales, profit, costs, output	Filtered	Filtered
Cash, stock, owed to you, owed by you	Ignored	Filtered

Add every company's net sales together and you get the figure shown for "All companies", to the paisa. That is one of the self-tests, not a hope: *"every company added together equals the group"*.

Screen · Sales & Channels

This screen exists to answer one uncomfortable question: **which channel looks big but is not?**

Screen · Money

₹8,84,230.00

live balance

TO COLLECT

₹5,54,900.00

2 overdue

TO PAY

₹4,94,800.00

2 late

NET POSITION

₹9,44,330.00

cash + owed - owing

Customers who owe you

CUSTOMER	COMPANY	AMOUNT	AGE	
Mynta (Mynta Designs Pvt Ltd)	Ethnic Fashion	1,86,400.00	12d	OK
Flipkart (Flipkart India)	Vastrangam	94,200.00	38d	Overdue
Surat Wholesale — Rajmandir	Adini Couture	2,12,800.00	5d	OK
Exhibition buyer — Dubai	Ethnic Fashion	61,500.00	72d	Chase now

Suppliers you owe

SUPPLIER	COMPANY	AMOUNT	DUE IN	
Jagdamba Textiles (Surat)	Ethnic Fashion	1,48,900.00	3d	On time
Kanchi Silks	Vastrangam	92,400.00	30d Late	Late
Surat Cotton Mills	Adini Couture	1,89,500.00	22d	On time
Zari Works Jaipur	Ethnic Fashion	64,800.00	76d Late	Very late

Profit build-up for this period

Net sales	₹6,96,410.00
- Purchases	₹3,43,000.00
- Making / wages	₹95,000.00
= Gross profit	₹2,58,410.00
- Running expenses	₹2,32,000.00
= Net profit	₹26,410.00

Cash, who owes you, who you owe — and the profit worked out line by line.

How the ageing tags work

	OK / ON TIME	OVERDUE / LATE	CHASE NOW / VERY LATE
Marketplaces and buyers who owe you	Under 30 days	Over 30 days	Over 60 days
Mills you owe	Not yet due	Past its due date	Over 60 days late

Net position — cash plus what you are owed, minus what you owe — is the card to watch. Healthy profit with a negative net position means the money is sitting in somebody else's account, not yours.

The profit build-up panel at the bottom is the most useful thing on this screen. It shows profit line by line — net sales, minus fabric and trims bought, minus wages, = gross profit, minus running costs, = net profit. Every line moves when you change the period or the company, so you can see exactly which line is eating the margin.

Production by month

MONTH	COMPANY	PIECES	WAGES	COST PER PIECE
Jul	Ethnic Fashion	80	14,250.00	178.13
Jul	Vastrangam	80	14,250.00	178.13
Jul	Adini Couture	374	66,500.00	177.81

What you are holding, what is running out, and what the floor produced.

The tag on the right of the stock table is the part to act on: "reorder" means at or below the reorder point — order it today. "low" means within twice the reorder point — order it this week. "ok" means leave it alone.

Cost per piece, in the production table, is the number to watch over time. If wages climb faster than pieces, every piece is costing more and the margin is shrinking quietly.

CARD	WHAT IT MEANS	WHAT TO DO ABOUT IT
Stock value	Everything held, valued at what it cost you	If this keeps climbing while sales do not, cash is being buried in stock.
Running out	Items at or below their reorder point	Any number above zero is a purchase list for today.
Pieces made	What the floor finished in this period	Compare with units sold — making far more than you sell is how stock value climbs.
Making cost	Wages paid for that output	Divide by pieces made and watch the trend month to month.

Why the reorder point, and not a percentage. A percentage of stock tells you nothing about how long it takes to replace. The reorder point is set per item, from how long the mill takes to deliver it — so "reorder" genuinely means "order it today or you will run out".

Adini Couture	1,62,816.50	-2,483.50	75,627.50	3,56,200.00	note of its own	Look at only this

Names you sell under

TRADING NAME	BELONGS TO	USED ON
GoFashion	Ethnic Fashion	Own website and marketplace listings
Vastrangam	Vastrangam	Marketplace seller name
Adini	Vastrangam	Marketplace seller name — every order is invoiced as Vastrangam

A trading name is not a company. Its orders are the sales of the company it belongs to, and they are counted once — under that company

What this screen will not do

It shows companies; it does not change them. Adding a company, removing what your companies billed each other, and working out which of them may file a return all live in **Group Consolidation**, the third app of this module.

This one reads. That is the whole point of a dashboard.

The same figures, one row per company — and the names you sell under, which are not companies.

A trading name is not a company. Vastrangam sells under two seller names on the same marketplace, and both are Vastrangam. Its orders are that company's sales, counted once, under that company. This screen keeps the two lists apart so nobody can quietly turn a name into a business and double a figure.

This screen reads. Adding a company, removing what your companies billed each other, and working out which of them may file a return all live in **Group Consolidation**, the third app of this module. A dashboard that could change the shape of your group would be a dashboard you could not audit.

Notice the **Plan covers** card. The number of companies you may run is a fact about your subscription, never about the software. A cap written into a product is a rebuild; a cap written into a plan is a decision you can change on a Tuesday.

Screen · Alerts — the five rules

Nobody types these in. They are worked out from your live figures every time the screen opens. Exactly five rules produce every alert in the system:

- 1

Stock at or below its reorder point. Marked **urgent**. Fabric below its reorder point is what stops a cut plan, and an idle karigar floor costs more than the fabric did.
- 2

Somebody has owed you money for more than 30 days. Marked **watch** — or **urgent** past 60 days.
- 3

A bill you owe has gone past its due date. Marked **watch** — or **urgent** past 60 days late.
- 4

A channel's return rate has reached 12% or more. Marked **watch**. Above 12%, a channel is usually telling you something about the listing, the size chart or the fit — not about bad luck.
- 5

A company in the group has no tax registration. Marked **watch** — not because it is wrong, but because it is a thing to know: that company counts in every group figure and cannot file a return.

Cleared

You have cleared 1 alert(s). They come back automatically if the situation gets worse.

Bring them all back

Alert cleared

One alert cleared. The count drops, and a "Cleared" panel appears with a way to bring them all back.

Clearing changes nothing in your business. It only records that you have seen it. If the underlying situation gets worse — the stock falls further, the payment goes another month late — the alert comes straight back on its own. "Bring them all back" undoes every clear at once.

- ▶ **An alert list you cannot tick off is an alert list you stop reading.** After a week of seeing the same four lines, your eye skips them — and then you miss the fifth.
- ▶ **Clearing is personal, not shared.** It is stored separately from your business data, so a backup restore never brings back a stale "handled" flag.
- ▶ **It cannot hide a real problem.** The alert is recalculated from live figures every single time the screen opens.
- ▶ **The "Cleared" count** tells you how many you are currently suppressing, so nothing is hidden from you either.

Read this screen once and you will never wonder where a figure came from again.

SYSTEM

Backup & Health

Wiring · Integration

Where every number comes from

The dashboard owns no data of its own. It reads the shared Data Core and shows you the result.

Shared Data Core: Item/SKU · Party · Stock · Ledger/Voucher · Order — every module reads and writes these.

Every figure on these screens, and its source

FIGURE HERE	COMES FROM	HOW IT IS WORKED OUT
Net sales	E-commerce / OMS + Sales	Marketplace and website orders added up, minus every return and cancellation, for the period and company you picked
Return %	E-commerce / OMS (returns)	Returns + gross sales, per channel — each marketplace is tracked separately because their return behaviour differs
Net profit	Sales + Purchase + HR & Payroll + Accounting & GST	Net sales - fabric purchases - kirgari wages - running expenses (rent, salaries, ads, courier)
Cash + bank	Accounting & GST (ledger)	Opening balance + everything earned or spent since — a true balance, not a period figure
To collect	Settlement + Sales (B2B invoices)	Money the marketplaces and wholesale buyers still owe, aged in days
To pay	Purchase (Accounts Payable)	Unpaid mill and zarf bills, showing days late or days remaining against agreed terms
Stock value	Inventory & Catalog (fabric and finished)	Metres / pieces on hand + cost, item by item — one stock number, not one per channel
Running out	Inventory & Catalog (reorder points)	Any fabric or SKU that has fallen to or below its reorder point — this is what stops a cut plan
Pieces made / making cost	Manufacturing (kirgari floor)	Pieces finished and wages booked by the tailoring unit for the period
Company switcher	Platform (companies)	Ethnic Fashion, Vastrangam and Adini Couture — every figure above is re-worked for the one you pick
Alerts	All of the above	Rules on live figures — fabric below reorder, settlement over 30 days, mill bill past due, channel return rate 12% or more

Live example — one sale

1

A sale is recorded in **Mynta**, against one of your companies.

2

→ **Net sales** and the channel table move immediately — for that company, and for the group.

3

→ **Stock** falls; if it crosses the reorder point an alert appears here.

4

→ **Money**: the customer balance is added to "to collect".

5

→ **Net profit** recalculates: net sales - purchases - wages - expenses.

This dashboard writes nothing

It is a **read-only** view of the business. Clearing an alert is the only thing stored, and only for you.

That is deliberate: a dashboard that can change your books is a dashboard you cannot trust.

The arithmetic behind every figure above is the **same code** that runs the Report Builder and Group Consolidation — not a copy of it, the same code. That is why the three can never disagree.

Every figure on the Dashboard, its source, and how it is worked out.

The statement at the bottom of that screen is the important one: this dashboard writes nothing. Clearing an alert is the only thing it ever stores, and only for you. That is deliberate — a dashboard that can change your books is a dashboard you cannot trust.

And it is checked, not just claimed. Two of the self-tests read the app's own code: "this app can do exactly four things, and none of them is writing" and "not one of them can add, change or delete a record". If somebody ever wires a save button into this app, the build fails before it ships.

Every figure, and where it comes from

This is the same table as the app's Wiring screen, so you have it on paper.

FIGURE	COMES FROM	HOW IT IS WORKED OUT
Net sales	E-commerce / OMS + Sales	Marketplace and website orders added up, minus every return and cancellation, for the period and company you picked
Return %	E-commerce / OMS (returns)	Returns ÷ gross sales, per channel — each marketplace is tracked separately because their return behaviour differs
Net profit	Sales + Purchase + HR & Payroll + Accounting & GST	Net sales – fabric purchases – karigar wages – running expenses (rent, salaries, ads, courier)
Cash + bank	Accounting & GST (ledger)	Opening balance + everything earned or spent since — a true balance, not a period figure
To collect	Settlement + Sales (B2B invoices)	Money the marketplaces and wholesale buyers still owe, aged in days
To pay	Purchase (Accounts Payable)	Unpaid mill and zari bills, showing days late or days remaining against agreed terms
Stock value	Inventory & Catalog (fabric and finished)	Metres / pieces on hand × cost, item by item — one stock number, not one per channel
Running out	Inventory & Catalog (reorder points)	Any fabric or SKU that has fallen to or below its reorder point — this is what stops a cut plan
Pieces made / making cost	Manufacturing (karigar floor)	Pieces finished and wages booked by the tailoring unit for the period
Company switcher	Platform (companies)	Ethnic Fashion, Vastrangam and Adini Couture — every figure above is re-worked for the one you pick
Alerts	All of the above	Rules on live figures — fabric below reorder, settlement over 30 days, mill bill past due, channel return rate 12% or more

The arithmetic of the whole module, in one place

NAME	WORKED OUT AS
Net sales	gross sales – returns
Return %	returns ÷ gross sales × 100
Gross profit	net sales – purchases – wages
Net profit	gross profit – running costs
Margin %	net profit ÷ net sales × 100
Cash + bank	opening cash + opening bank + all-time net profit
Stock value	for every item: quantity × cost, added together
Net position	cash + what you are owed – what you owe
Cost per piece	wages for the month ÷ pieces made that month
Group net sales	every company's net sales added up, – what they billed each other
Group profit	every company's profit added up. Internal billing cancels itself out

Every figure is rounded to two decimal places at the moment it is calculated, so a total can never disagree with the rows above it by a stray paisa.

This is the promise, and the app checks it on itself every time it opens: **no Medhava app depends on any single outside service.** Not one accounting package, not one marketplace, not one AI company, not one automation tool, not one courier.

The three rules the app enforces on itself

- 1

No capability has only one choice. Every one has at least three; most have eight to twelve.
- 2

Every capability has a built-in or by-hand option — so the app is fully usable with **nothing connected at all**. No account anywhere, no internet, no subscription. That is how it ships, and it is the default it starts on.
- 3

Every capability has an option you can host yourself — so you are never forced to send your business data to somebody else's cloud, whatever the fashion of the day is.

All three appear as ordinary self-tests on the **Backup & Health** screen, in plain English, alongside the rest — so you can confirm them yourself in five seconds.

Switching a provider never changes a figure. The arithmetic lives in Medhava, not in the service. Move from one courier to another and every past shipping record stays exactly as it was — only new labels come from somewhere else. There is a self-test for exactly this: *"switching a provider changes nothing else in your data"*.

What the four tags on the screen mean

TAG	WHAT IT MEANS FOR YOU
built in	Ships inside Medhava. Needs nothing, costs nothing, works offline.
you host it	You run it on your own machine or server. Your data never leaves your control.
their cloud	Somebody else's service, connected with a scoped, revocable key.
by hand	A person does it, or a CSV goes in and out. Always available.

Why this rule exists at all. Software that can only work with one outside company is not a tool you own — it is a bet on somebody else staying cheap, staying available and staying in business. Every capability here has a way out, including a way that needs nobody.

What this app can be wired to

CEO Dashboard uses 4 capabilities and offers 34 alternatives across them. Every one is a button on the Connectors screen — click it and you have switched.

CAPABILITY	THE OPTIONS, IN FULL
Books & ledger	Medhava Books · Tally · BUSY · Marg · Zoho Books · QuickBooks · ERPNext · CSV in / CSV out
Sales channels	Type them in · CSV import · Amazon · Flipkart · Myntra · Meesho · Ajo · Nykaa · JioMart · Shopify · WooCommerce · Medusa / self-hosted store
Files & backups	This device · A USB drive · MinIO (self-hosted) · Nextcloud (self-hosted) · Google Drive · Dropbox · OneDrive · Amazon S3 · Backblaze B2
Printing	Browser print / PDF · Any ESC/POS thermal printer · Zebra label printer · TVS printer · No printer — share the PDF

Cloud services use a **scoped, revocable key** — **never your password**. A key can be limited to only what it needs and cancelled in one click from the service's own side, without touching your login. **Medhava will never ask you for a marketplace, bank or account password**. If any screen ever does, it is not Medhava.

What if the tool you use is not on the list?

Then it becomes one more button. A provider is a small adapter — read from there, write to there — and the app around it does not change, because the arithmetic never lived in the provider. Adding one does not touch a single figure, a single screen or a single self-test.

WHEN A PROVIDER IS ADDED OR SWAPPED	WHAT HAPPENS
Your existing records	Untouched. Nothing is migrated, because nothing was stored in the provider.
Every figure on every screen	Identical — there is a self-test that proves this.
Your saved work and settings	Untouched.
The self-tests	Same list, same names, still passing.
What you have to relearn	Nothing. The screens do not change.

The practical version of the promise: if a service you use doubles its price, changes its terms, or shuts down, you click a different button. You do not change software, you do not re-enter data, and you do not lose a day.

The 30 self-tests, in full (1 of 2)

These run every time the app opens, **before** anything is shown. Menu → **Backup & Health** to see them live. They are written in plain language on purpose — you should be able to read what was checked.

RESULT	WHAT WAS CHECKED
✓ pass	net sales = gross – returns
✓ pass	July sales outside the group = 676000
✓ pass	gross profit = net sales – purchases – wages
✓ pass	net profit = gross profit – expenses
✓ pass	channel net totals equal overall net sales
✓ pass	period filter works: months add up to all
✓ pass	switching period changes the numbers
✓ pass	every company added together equals the group
✓ pass	the company filter never invents or loses a record
✓ pass	switching company changes the numbers
✓ pass	a balance ignores the period but not the company
✓ pass	stock value = qty × cost
✓ pass	low stock list only items at/below reorder
✓ pass	receivables total = sum of balances
✓ pass	alerts are raised for every low-stock item

The 30 self-tests, in full (2 of 2)

Continued. The last group are the **Connectors** checks — the ones that keep the no-lock-in promise honest.

RESULT	WHAT WAS CHECKED
✓ pass	an overdue receivable (>30d) raises an alert
✓ pass	clearing an alert removes it
✓ pass	cash balance is a real position, not a period figure
✓ pass	a company with no tax registration still counts in the figures
✓ pass	this app can do exactly four things, and none of them is writing
✓ pass	not one of them can add, change or delete a record
✓ pass	every capability this app uses is a known one
✓ pass	no capability offers only one choice
✓ pass	every capability works with nothing connected (built-in or by hand)
✓ pass	every capability has an option you can host yourself
✓ pass	exactly one provider is active per capability
✓ pass	the default provider never needs an outside service
✓ pass	no single company is unavoidable across capabilities
✓ pass	switching a provider changes which one is active
✓ pass	switching a provider changes nothing else in your data

If you ever see a red "fail", stop trusting the numbers on screen. Take a backup, reload the file, and report which line failed. Software that tells you when it is broken is worth more than software that is quietly wrong.

How to run it, and what it will not do

Running it

1. **Windows:** extract the ZIP, then double-click the `.html` file. It opens in your browser. That is the whole installation.
2. **Mac:** unpack the ZIP, double-click the file. Safari opens it.
3. **Android:** Files app → Downloads → tap the file → open with Chrome. Then ⋮ → **Add to Home screen** and it behaves like any other app.
4. **iPhone / iPad:** Files app → tap the file → Safari. Then Share → **Add to Home Screen**.
5. No internet needed, ever. No account, no licence key, no setup wizard.

Keeping your data safe

Your figures live in your own browser on your own device — nowhere else, and never on anybody's server. That means nobody can see them, and also that clearing your browser's site data would erase them. So: **Backup & Health** → **Export JSON**, once a week. To move to another device, take the file and the backup with you and use **Import JSON**.

Backup & Health — your data controls, and the live test results below them.

What it will not do

- ▶ It cannot change a record. That is not a limitation, it is the design — see the Wiring chapter.
- ▶ In this single-file form it does not pull live from your marketplace panels; the hosted version of Medhava is what connects those pipes.
- ▶ It does not sync between your devices on its own — use the backup file.
- ▶ It has no user accounts or passwords. Whoever can open your device can open the app.
- ▶ It will not stop you recording something silly. It checks its own arithmetic, not your judgement.

Accepted when: the app opens by double-click with no internet · all 30 self-tests show pass · switching the period or the company changes every figure · an alert can be cleared and brought back · a backup exports and imports cleanly.
