

MODULE 04 OF 16

E-commerce / OMS

Marketplace OMS · Order Management

2 apps × 2 editions — Medhava (any industry) and Vastrangam

Module 03 recorded the sale. Module 04 is about getting it out of the door. Seven seller panels collapsed into one queue with one clock, and one order book across every channel where the warehouse is chosen for you and the delivery date is worked out rather than promised.

4 working apps

188 self-tests, all passing

58 workflow assertions

Zero console errors

What this module is

Module 03 was about **recording the sale**. Module 04 is about **getting it out of the door** — and it is where multi-channel businesses actually break.

Two apps, because there are two different problems here and conflating them is the usual mistake. One is the **marketplace problem**: seven seller panels, seven dispatch clocks, seven commission rates, and a gross figure on every one of them that is not your money. The other is the **fulfilment problem**: which warehouse ships it, and what date the customer was actually promised.

The two apps

#	APP	THE PROBLEM IT SOLVES	SCREENS	TESTS
1	Marketplace OMS	Seven panels, seven clocks, and a gross figure that is not yours	9	39
2	Order Management	Which warehouse ships it, and what date was really possible	13	55

Both apps refuse things rather than warning about them. Marketplace OMS refuses to show a gross figure as if it were yours, and refuses per-panel stock. Order Management refuses to ship without an allocation, refuses a refund before the parcel is back and inspected, and refuses to let anybody type a promise date. A warning gets clicked through on a busy afternoon; a gate does not.

7. How this was verified
8. Where this sits, and what comes next

How the two apps divide the work

They are not two views of the same thing. They own different decisions, and they hand over cleanly.

	MARKETPLACE OMS	ORDER MANAGEMENT
Its question	Which panel, how long have I got, and what does it actually pay?	Which warehouse, and by what date can it really be there?
What it owns	The dispatch clock, the commission arithmetic, the per-panel price	The allocation, the promise date, the returns desk
Its unit of time	Hours — dispatch windows are 12h to 48h	Days — transit is 1 to 7 days
Its gate	Gross is never shown as if it were yours; stock is never per-panel	No shipping without an allocation; no refund before inspection
Channels	Marketplaces only — that is the point	Every channel, marketplaces included

A marketplace order is in both apps, and that is deliberate. Marketplace OMS asks whether it will make the panel's 24-hour window and what the panel will pay. Order Management asks which warehouse it comes from and what date the customer sees. Those are different questions with different answers, and a single "orders" screen answers neither well.

The two ideas worth the whole module

1 · Gross is not your money

A marketplace shows you what the customer paid. Your bank shows you what is left after commission, a shipping fee, and — eventually — the parcels that came back. Between a 30% panel and a 12% panel those are entirely different businesses, and comparing them at gross is the commonest expensive mistake in Indian e-commerce.

Every panel side by side, sorted by what actually reaches the bank rather than by what was invoiced.

2 · A promise date should be derived, not typed

The most expensive habit in direct-to-consumer selling is a delivery date typed by whoever wanted the sale. Once the date is **derived** — cut-off, plus that warehouse's transit days to that zone — the argument moves to where it belongs: which warehouse holds the piece, and whether the courier can reach that pin code in time.

The test of this is on the Allocation desk. Move one piece from a far warehouse to a nearer one, and the date on the customer's order changes by itself. Nobody edits anything. A promise date stored in a field could never behave that way — which is precisely why stored promise dates are wrong within a month.

Nothing in this module is locked to one company

A rule that holds across all sixteen modules, and one that every app checks on itself at every launch: **no Medhava app depends on any single outside service.**

These two apps touch marketplaces, couriers, payment gateways, printers, automation tools and messaging. Every one of those is a capability with alternatives, and every one has an option that needs nobody at all.

CAPABILITY	OPTIONS, INCLUDING ONES THAT NEED NOBODY
Sales channels	Type them in · CSV import · Amazon · Flipkart · Myntra · Meesho · Ajio · Nykaa · JioMart · Shopify · WooCommerce · your own store
Couriers	Type the AWB in · your own delivery · Delhivery · Blue Dart · DTDC · Ecom · XpressBees · India Post · Shiprocket · NimbusPost
Payments & refunds	Cash · UPI direct with your own QR (no commission) · Razorpay · PayU · Cashfree · PhonePe · Paytm · Stripe · CCAvenue
Automation	Medhava Rules (built in) · n8n · Node-RED · Windmill · Airflow (self-hosted) · n8n Cloud · Make · Zapier · Pipedream · cron + webhook · by hand
Books & ledger	Medhava Books (built in) · Tally · BUSY · Marg · Zoho Books · QuickBooks · ERPNext (self-hosted) · CSV to your CA
Customer messaging	Copy and send it yourself · WhatsApp Cloud API · Gupshup · Interakt · MSG91 · Twilio · email instead · Chatwoot (self-hosted)
Files & backups	This device · a USB drive · MinIO or Nextcloud (self-hosted) · Google Drive · Dropbox · OneDrive · Amazon S3 · Backblaze B2

Cloud services use a scoped, revocable key — never your account password. Medhava will never ask you for a marketplace, bank or account password. If any screen ever does, it is not Medhava.

The practical version: if a courier doubles its rate or a marketplace changes its terms, you click a different button on the Connectors screen. You do not change software, you do not re-enter data, and you do not lose a day. Every app in this module ships with **"Outside services required: 0"** as a test result rather than as a slogan.

Medhava and Vastrangam, side by side

Same two engines, same self-tests, same arithmetic. Only the master data differs.

	MEDHAVA (UNIFIED ERP)	VASTRANGAM
Company	Acme Corp — stands in for any business	Vastrangam — ethnic-wear D2C + marketplace
Items	Standard · Premium · Accessory · Top-of-range	Cotton kurta set · Banarasi saree · Zari dupatta · Bridal lehenga
Marketplaces	Seven neutral panels — horizontal, category specialist, value, premium, curated, reseller	Myntra 30% · Amazon 22% · Flipkart 24% · Ajio 28% · Nykaa Fashion 26% · Meesho 12% · Tata Cliq 20%
Dispatch windows	12h to 48h — different per panel, which is the whole point	
Warehouses	North · West · South	Delhi NCR · Mumbai · Bengaluru
Channels	Own website · Marketplaces · Retail counter · Wholesale · Social	vastrangam.com · Marketplaces · Showroom counter · Boutiques · Instagram & WhatsApp
Transit matrix	Identical — 1 to 7 days, as the couriers actually run them	
Engines	Identical. Two files, shared by both.	
Self-tests	Identical names, identical counts, all passing in both.	

Why ship both? The neutral edition is what a new customer in any industry receives. The Vastrangam edition is the proof the neutral engines survive a real business — real marketplace commission rates, real fashion return rates, real transit times across India. If a rule only works when the data is tidy, the Vastrangam build finds it first.

What you were sent, and how to open it

Two separate ZIPs, plus this note. **There is no combined outer ZIP** — each edition arrives on its own, so you never have to unpack something twice to find the one you wanted.

Opening it

1. **Pick your edition** — **MEDHAVA_...zip** for the neutral ERP, **VASTRANGAM_...zip** for the Vastrangam build. You can extract both; they do not collide.
2. **Extract it.** Windows: right-click → "Extract All". Mac: double-click it.
3. **Open the app folder** you want. Everything for that app is in it: the app, its manual, its PDF.
4. **Double-click the .html file.** Every filename starts with MEDHAVA_ or VASTRANGAM_ and carries the module and app number, so you always know which one you have open.

The one mistake to avoid: opening the HTML file directly from inside the ZIP. Windows unpacks it to a temporary folder that gets wiped, so your data appears to vanish. Always extract first.

All 2 apps can be open at once, in both editions. Each keeps its own data under its own name, so nothing collides — and in the hosted version they share one order book, which is what the Wiring screen in each app describes.

How this was verified

Four builds, four gates each. Nothing shipped on the basis that it looked right on screen.

- 1 The arithmetic, with no screen involved.** Each engine run in isolation, its self-tests executed against the seeded data. **188 tests across the four builds, all passing.**
- 2 Every screen and every control, in a real browser.** Each build opened in headless Chromium; every screen visited and every interactive control on it clicked — 84 clicks in Marketplace OMS, 105 in Order Management, including every provider button on the Connectors screen.
- 3 The real job, with the result asserted.** Not "does the button click" but "did the thing happen": **58 workflow assertions** across the two apps. A control that looks alive but changes nothing fails the build.
- 4 Every page of every PDF checked for fill.** A page that came out nearly empty means a screenshot never got captured — which is how a missing screen is caught before it ships rather than after.

What the workflow run actually does, and checks

APP	IT DOES	AND ASSERTS
Marketplace OMS	Advances the top of the queue; cancels an order; levels a broken price; records a return	The stage moved exactly one step · the cancelled order gave its stock back · every panel landed on the list price · the returned piece came back into stock
Order Management	Filters to one channel; tries to allocate an order nothing can serve; moves stock between warehouses; allocates for real; tries to refund a parcel that has not arrived, then one nobody has inspected; refunds a resaleable return and a damaged one	The filter narrowed the book · the backorder stayed unallocated with no warehouse · the stock moved without changing the total · the promised date changed by itself · allocating touched exactly one shelf · both refunds were refused · the resaleable piece went back into stock and the damaged one did not

Every screenshot in every one of these PDFs was captured from the shipped file at double resolution, in the state its caption describes. Nothing is a mock-up.

Where this sits, and what comes next

Sixteen modules and forty apps, in the order they are being built: see the business, know who you deal with, record what you sell, then get it out of the door.

#	MODULE & APPS	STATUS
01	Dashboard & BI — CEO Dashboard · Report Builder	Delivered
02	CRM — CRM & Customer 360	Delivered
03	Sales — D2C Sales · B2B & Credit · Export · POS · Quotes & Proforma	Delivered
04	E-commerce / OMS — Marketplace OMS · Order Management	Delivered — you are holding it
05	Warehouse — Picking & Bins · Barcode Operations	Next
06	Logistics — Couriers & AWB	
07	Inventory & Catalog — Stock · Catalog / PIM	
08	Manufacturing — Production Orders · Karigar & Piece-rate · BOM & Consumption · Quality Control	
09	Purchase — Procurement · Vendor Management	
10	HR & Payroll — Staff & Karigar · Time-off & Advances · Appraisal & Hiring	
11	Accounting & GST — Accounting · Invoicing · Expenses · GST & Tax · Finance Reports	
12	Settlement — Reconciliation · Claims & Disputes · Returns / RMA	
13	Marketing — Social Calendar · Campaigns · Repricing Engine · Automation	
14	AI Content Engine — Content Engine	
15	Image Studio — Image Studio	
16	Video Studio — Video Studio	
—	Platform — Identity, Settings & Audit	The spine every module runs on

Module 04 is accepted when: all four apps open by double-click with no internet · all 188 self-tests pass · the dispatch queue sorts by time left rather than order date · an order no warehouse can serve is refused a date · moving stock changes the promised date by itself · a refund is refused until the parcel is back and inspected · all 58 workflow assertions hold · a backup exports and imports cleanly on a computer and a phone.
