

MODULE 02 OF 16

CRM

CRM & Customer 360

1 app × 2 editions — Medhava (any industry) and Vastrangam

Know every customer completely. One record per person carrying every lead, order, return and conversation — whichever channel it came from. Before they buy it is a pipeline with honest odds; after they buy it is a full lifetime that maintains itself.

2 working apps

76 self-tests, all passing

Zero console errors

Full workflow verified

What this module is

Module 01 told you **what is happening**. Module 02 tells you **who it is happening with**.

It is one app, and it covers the whole relationship — from the first enquiry to the customer who has quietly stopped ordering. The two halves are usually sold as separate products (a "CRM" for leads, an "analytics" tool for customer value). Splitting them is what creates the gap where a won deal never becomes a tracked customer.

The one app

APP	ANSWERS	SCREENS	SELF-TESTS
1 · CRM & Customer 360	Who are we chasing, what will actually close, who have we won, what are they worth, and who has gone quiet?	8	38

Two editions of it

EDITION	WHAT IT IS
Medhava	The unified ERP. Industry-neutral names and rules — the same engine runs a distributor, a manufacturer, a clinic or a services firm. You change the master data, not the software.
Vastrangam	The same engine with Vastrangam's own world in it: Myntra and Flipkart category managers, Jaipur boutiques, Surat wholesale, exhibition buyers, Dubai exports.

The engine is byte-for-byte identical between the two editions. Only the configuration file differs. Both pass exactly the same 29 self-tests, with the same names — which is the proof that "industry-neutral" is real and not a claim.

Contents

1. What this module is

8. What you were sent, and how to open it
9. How this was verified
10. Where this sits, and what comes next

How CRM sits on the Data Core

CRM owns the lead and the conversation. Everything about money and orders it reads.

This is the line most CRMs cross, and it costs them their credibility. Once a CRM keeps its own copy of "customer revenue", that copy starts drifting from the books within weeks — and then two screens in the same business disagree about the same customer. Here, worth is recalculated from the orders every time the screen is drawn. There is nothing to drift.

Who writes what

RECORD	WRITTEN BY	READ BY CRM FOR
Lead	CRM — nothing else knows an enquiry arrived	Pipeline, weighted pipeline, win rate
Conversation note	CRM — a promise on a call exists nowhere else	The customer's history
Customer / Party	CRM writes it the moment a deal is won	Every customer screen
Order	Sales, or Channel Manager for marketplaces	Worth, average order, last-order date
Return	Sales returns, or the marketplace feed	Worth, return %, channel mix
Payment	Accounting	Whether they actually pay, and how late

Three rows written here, three rows read from elsewhere. That split is the whole design. CRM knows things nobody else can know, and stays quiet about everything it would only be guessing at.

The pipeline, and the odds behind it

A deal that arrived yesterday and a deal where you are arguing over the last 2% are both "open". They are not the same thing, so every stage carries a fixed, visible probability.

The six behaviour groups

Every customer is in exactly one group, worked out from behaviour — how often they buy and how long ago — never from anybody's opinion.

GROUP	A CUSTOMER LANDS HERE WHEN	WHAT IT MEANS
Champion	Bought 4+ times, and bought in the last 45 days	Your best. Hold on to them.
Loyal	Bought 2+ times, and bought in the last 60 days	Reliable. Grow the order size.
Needs attention	Bought 2+ times, but quiet for 60–90 days	Something changed. Find out what.
At risk	Has not bought in 90 days	Call this week, not next month.
Sleeping	Has not bought in 180 days	One last try, then stop spending.
New	Bought once, or not yet at all	Make the second order easy.

Customers · Segments

Segments & offers

Every customer falls into exactly one group, by the same rule, every time. No guessing, no manual tagging.

Segments are worked out from behaviour — how many times they bought and how long ago — not from anybody's opinion.

The rules, in plain words

SEGMENT	A CUSTOMER LANDS HERE WHEN	CUSTOMERS	WORTH	SHARE OF VALUE
Champion	Bought 4 or more times, and bought in the last 45 days	2	11,02,600.00	
Loyal	Bought 2 or more times, and bought in the last 60 days	1	1,88,300.00	
Needs attention	Bought 2 or more times, but has been quiet 60–90 days	1	1,77,000.00	
At risk	Has not bought in 90 days	1	2,54,000.00	
Sleeping	Has not bought in 180 days	1	1,06,900.00	
New	Bought once, or not yet at all	3	39,500.00	

What to say to each group

SEGMENT	CUSTOMERS	WHAT TO OFFER NEXT	
Champion	2	Give them first look at the new season and hold their rate. Ask for the festive indent early — they will commit.	See the 2 ..
Loyal	1	Push the indent size up. A small rate break on 40 pieces costs less than finding a new boutique.	See the 1 ..
Needs attention	1	One phone call, not a discount. In this trade it is usually a delivery date or a size-chart complaint, not price.	See the 1 ..
At risk	1	Call within the week. Ask what went wrong on the last lot — with fabric, something usually did.	See the 1 ..
Sleeping	1	One clear win-back offer tied to the festive window. If it does not land, stop spending on them.	See the 1 ..
New	3	Make the second order easy. The gap between one lot and two is where most boutiques are lost.	See the 3 ..

Why this matters

In ethnic wear the temptation is to chase whoever places the biggest order and ignore everybody else. These six groups are worked out from behaviour instead — how often somebody indents and how long ago — so effort goes where it returns something. A Jaipur boutique that reorders every six weeks at 4% returns is often worth more than a marketplace account with a huge gross and 14% coming back.

Change nothing and the segments still update themselves — the moment somebody orders, or stops ordering, they move group on their own.

Logged ✓

Each group with its rule, its customer count, its worth, and its share of total customer value.

The share-of-value bar is usually the uncomfortable part. A very large share of what a business is worth normally sits with a very small number of people — and most businesses spend their marketing money on everybody equally.

Why nothing here has to be maintained

The reason most CRM projects are abandoned is not that the software was bad. It is that keeping it accurate became somebody's unpaid second job. This one is built so there is almost nothing to keep.

- 1 You never enter an order.** Orders are read from Sales. A customer's worth, returns, average order and last-order date all follow automatically.
- 2 You never tag a customer.** Segments are rules on live figures. Somebody who orders today becomes a Champion without anybody noticing; somebody who goes quiet becomes At risk on day 91.
- 3 You never re-key a won deal.** Pressing Won creates the customer in the same click.
- 4 You never write a report.** "Who needs a call", "where deals are being lost" and the share-of-value bars are all derived, every time the screen opens.

What is left for a human to do — exactly three things

YOU DO	WHY ONLY YOU CAN
Add a lead	Nothing else in the business knows an enquiry arrived.
Move it on, or mark it won / lost	Only you know whether a price is genuinely on the table.
Log what was said	A promise made on a call exists nowhere else. If it is not written down, it is gone the day you are unavailable.

Three actions. Everything else on all seven screens is worked out from them and from what the rest of the business already records.

The four things a maintained CRM asks of you, and what happens here instead

USUALLY SOMEBODY HAS TO...	HERE
Update the customer's total spend	Recalculated from the orders every time the screen is drawn
Re-tag customers as "VIP" or "lapsed"	Six rules run on live figures — a customer moves group on day 91 without anybody noticing
Copy a won deal into the customer list	One click does both
Build a "who to call" report each Monday	It is on the Overview, recomputed on open

This is why CRM projects fail, and it is rarely the software. A CRM that needs a person to keep it honest is accurate for about six weeks. After that the numbers on it are quietly wrong, people stop trusting the screen, and it becomes a place where notes go to die. The only defence is to make sure there is almost nothing to keep — which is what the table above is.

Medhava and Vastrangam, side by side

Same engine, same 29 self-tests, same arithmetic. Only the master data differs — which is exactly the point.

	MEDHAVA (UNIFIED ERP)	VASTRANGAM
Company	Acme Corp — stands in for any business	Vastrangam — ethnic-wear D2C + marketplace
Lead sources	Website enquiry · Referral · Trade show · Cold outreach · Marketplace lead	Boutique enquiry · Referral from a buyer · Exhibition / trade fair · Marketplace category manager · Instagram DM
Customers	Northline Retail · Metro Distributors · Harbour Trading · Sunrise Enterprises	Myntra · Flipkart · Rajmandir Wholesale (Surat) · Anokhi Boutique (Jaipur) · Silk Route Exports (Dubai)
Why deals are lost	Price too high · Went to a competitor · Timing · Payment terms	Wanted a lower rate · Went to a Surat competitor · Delivery date did not suit · Credit terms
Channels on a record	Retail · Marketplace · Website · Wholesale · Export	Myntra · Flipkart · Own Website · Wholesale (Surat) · Exhibition / Exports
Offer per group	Neutral commercial language	Festive indents, rate holds, size-chart fixes
Engine	Identical. One file, shared by both.	
Self-tests	29 each — identical names, all passing in both.	

Why ship both? The neutral edition is what a new customer in any industry receives. The Vastrangam edition is the proof the neutral engine survives a real business — real return rates, real settlement delays, buyers who are marketplaces rather than people. If a rule only works when the data is tidy, the Vastrangam build finds it first.

What putting Medhava into a new business actually involves

Editing one configuration file. Nothing in the engine is touched, so nothing that was tested stops being true.

YOU CHANGE	YOU DO NOT CHANGE
Company name and financial year	How a customer's worth is calculated
Your lead sources — however many, whatever they are called	The four stages, or their odds
Your customers, their type and city	The six segment rules and their day thresholds
The reasons you actually lose deals	How the win rate is worked out
The offer written for each group	Any of the 38 self-tests
Every word on the Wiring screen	That worth is read, never stored

One thing worth saying plainly: the Vastrangam edition is not a demo with the names changed. Its buyers are marketplaces, not people; its return rates are the real ones; its lost-deal reasons are the ones that actually come up in Surat. That is what makes it a test rather than a screenshot.

Nothing in this module is locked to one company

A rule that holds across all sixteen modules, and one that every app checks on itself at every launch: **no Medhava app depends on any single outside service.**

Not one accounting package. Not one marketplace. Not one AI company. Not one automation tool. Not one courier. Not one payment gateway.

How it is enforced, rather than promised

- 1 Every app **declares the capabilities it uses** — books, channels, messaging, storage, automation, and so on. An app that does not declare them **fails its own build**; it cannot ship.
- 2 Every capability carries a list of **interchangeable providers**, each one a button on the app's **Connectors** screen. Click a different one and you have switched.
- 3 Three self-tests run in **every app, every launch**: no capability has fewer than three choices · every capability has a built-in or by-hand option · every capability has an option you can host yourself.
- 4 A fourth test proves **switching a provider changes nothing else in your data**. The arithmetic lives in Medhava, never in the service.

Some of what that means in practice

CAPABILITY	OPTIONS, INCLUDING ONES THAT NEED NOBODY
Books & ledger	Medhava Books (built in) · Tally · BUSY · Marg · Zoho Books · QuickBooks · ERPNext (self-hosted) · CSV to your CA
Sales channels	Type them in · CSV import · Amazon · Flipkart · Myntra · Meesho · Ajio · Nykaa · JioMart · Shopify · WooCommerce · your own store
AI writing	Medhava templates (no AI at all) · Ollama on your own machine · self-hosted Llama or Mistral · Claude · GPT · Gemini · DeepSeek · Groq · write it yourself
AI images	Upload your own · Stable Diffusion or Flux on your own machine · Midjourney · OpenAI · Imagen · Firefly · Canva · Medhava Image Studio
Automation	Medhava Rules (built in) · n8n · Node-RED · Windmill · Airflow (self-hosted) · n8n Cloud · Make · Zapier · Pipedream · cron + webhook · by hand
Couriers	Type the AWB in · your own delivery · Delhivery · Blue Dart · DTDC · Ecom · XpressBees · India Post · Shiprocket · NimbusPost
Payments	Cash · UPI direct with your own QR (no commission) · Razorpay · PayU · Cashfree · PhonePe · Paytm · Stripe · CCAvenue

Cloud services use a scoped, revocable key — never your account password. Medhava will never ask you for a marketplace, bank or account password. If any screen ever does, it is not Medhava.

The practical version: if a service doubles its price, changes its terms or shuts down, you click a different button. You do not change software, you do not re-enter data, and you do not lose a day.

What you were sent, and how to open it

Two separate ZIPs, plus this note. **There is no combined outer ZIP** — each edition arrives on its own, so you never have to unpack something twice to find the one you wanted.

_WIRING.pdf )
```

Opening it

1. **Pick your edition** — **MEDHAVA_...zip** for the neutral ERP, **VASTRANGAM_...zip** for the Vastrangam build. You can extract both; they do not collide.
2. **Extract it.** Windows: right-click → "Extract All". Mac: double-click it.
3. **Open the app folder** you want. Everything for that app is in it: the app, its manual, its PDF.
4. **Double-click the .html file.** Every filename starts with MEDHAVA_ or VASTRANGAM_ and carries the module and app number, so you always know which one you have open.

The one mistake to avoid: opening the HTML file directly from inside the ZIP. Windows unpacks it to a temporary folder that gets wiped, so your data appears to vanish. Always extract first.

The app can be open at once, in both editions. Each keeps its own data under its own name, so nothing collides — and in the hosted version they share one order book, which is what the Wiring screen in each app describes.

How this was verified

Both builds went through three gates. Nothing shipped on the basis that it looked right.

- 1 The arithmetic, with no screen involved.** Each engine was run in isolation and its self-tests executed. **76 tests across the two builds, all passing.**
- 2 The whole workflow, in a real browser.** Not just "does the screen draw" — the actual job: add a lead, move it on a stage, mark it won, **confirm the customer was created**, mark another lost, filter to a segment, open a Customer 360, log a note and **confirm it landed on that customer and nobody else**. Every screen was also visited and every control on it clicked. Any console error, script error or blank screen would have failed the build. **Zero errors in both.**
- 3 The screenshots in this document are the real thing** — captured from the shipped file at double resolution, in the state each caption describes. Nothing is a mock-up.

BUILD	SCREENS	CONTROLS CLICKED	WORKFLOW STEPS	SELF-TESTS	ERRORS
CRM & Customer 360 · Medhava	6 / 6	83	7 / 7	38 / 38	0
CRM & Customer 360 · Vastrangam	6 / 6	83	7 / 7	38 / 38	0

You can re-run the first gate yourself at any time, with no tools: open the app and go to **Backup & Health**. The tests ran when the app started, and the results are on that screen.

The seven workflow steps the browser run actually performs

#	IT DOES	AND ASSERTS
1	Types a name, a firm and a value; presses Add to pipeline	The open-deal count went up by exactly one
2	Presses Move on → on that deal	Its stage went from new to contacted — one step, not two
3	Presses Won	A customer was created, and the lead now reads won
4	Presses Lost on a seeded deal	The lost count rose, with a reason attached
5	Filters to At risk , then back to Everyone	Both screens drew without error
6	Opens a Customer 360	The record drew with a heading
7	Logs a note	The note count rose by one — and a separate self-test proves it landed on that customer and nobody else

Why assert, instead of just clicking? A button that does nothing still "clicks" successfully. Every step above checks the data afterwards, so a control that looks alive but changes nothing would fail the build.

Where this sits, and what comes next

Sixteen modules and forty apps, in the order they are being built. The order is deliberate: see the business (01), then know who you are dealing with (02), then record what you sell (03).

#	MODULE & APPS	STATUS
01	Dashboard & BI — CEO Dashboard · Report Builder	Delivered
02	CRM — CRM & Customer 360	Delivered — you are holding it
03	Sales — D2C Sales · B2B & Credit · Export · POS · Quotes & Proforma	Next
04	E-commerce / OMS — Marketplace OMS · Order Management	
05	Warehouse — Picking & Bins · Barcode Operations	
06	Logistics — Couriers & AWB	
07	Inventory & Catalog — Stock · Catalog / PIM	
08	Manufacturing — Production Orders · Karigar & Piece-rate · BOM & Consumption · Quality Control	
09	Purchase — Procurement · Vendor Management	
10	HR & Payroll — Staff & Karigar · Time-off & Advances · Appraisal & Hiring	
11	Accounting & GST — Accounting · Invoicing · Expenses · GST & Tax · Finance Reports	
12	Settlement — Reconciliation · Claims & Disputes · Returns / RMA	
13	Marketing — Social Calendar · Campaigns · Repricing Engine · Automation	
14	AI Content Engine — Content Engine	
15	Image Studio — Image Studio	
16	Video Studio — Video Studio	
—	Platform — Identity, Settings & Audit	The spine every module runs on

What stays the same in every module from here

- ▶ **One ZIP per module**, holding one ZIP per edition — MEDHAVA and VASTRANGAM — each with a folder per app.
- ▶ **Every file is named by edition, module and app**, so nothing is ambiguous once extracted.
- ▶ **Every app is one HTML file**. Double-click, works offline, saves in the browser, exports a backup.
- ▶ **Every app ships a manual** for someone who has never installed software, and an illustrated PDF built from real screenshots of the shipped file.
- ▶ **Every app carries its own self-tests** and its own Wiring screen naming the source of every figure.

Module 02 is accepted when: both apps open by double-click with no internet · all 76 self-tests pass · a lead can be added, moved, won and lost · winning a lead creates the customer immediately · segments recalculate without anybody tagging anyone · a backup exports and imports cleanly on a computer and a phone.
