

VASTRANGAM — ETHNIC-WEAR D2C + MARKETPLACE

# Quotes & Proforma

A promise with an expiry date — and every revision kept

Module 03 · Sales — App 5 of 5

Vastrangam quotes before almost every wholesale sale — a boutique wants a rate on 60 sarees before it commits. Send the quote, revise it as they haggle, and turn the accepted one into a proforma and then a confirmed order in one click each, with nothing re-typed. Two things make this worth having. First, a quote expires by itself the day its validity runs out — nobody has to re...

Expires by itself

# What this is, and what is inside

Send a quote, revise it as the customer haggles, and turn the accepted one into a proforma and then a confirmed order in **one click each, with nothing re-typed**.

**A quote expires by itself** the day its validity runs out. The expiry is worked out from the date and the validity you chose — it is not a field somebody has to update. So nobody can honour a three-month-old price by accident because "we did quote it".

**Every revision is kept.** The customer only ever sees the latest; you can always see the first. That is the only way to answer "what did discounting cost us this quarter" — a question almost nobody asks, because almost no system can answer it.

The proforma carries the **same lines, the same discount and the same total** as the quote the customer said yes to. There is no moment where somebody re-keys it and a figure changes.

## What this document covers

1. What this is, and what is inside
2. Where Quotes & Proforma sits
3. The process, end to end
4. Screen · Overview
5. Screen · All quotes
6. A quote raised
7. An expired quote, re-quoted
8. Screen · One quote
9. A revision saved
10. Screen · Wiring
11. Every figure, and how it is worked out
12. Connectors — nothing is locked to one company
13. The three rules the app enforces on itself
14. What this app can be wired to
15. The 34 self-tests, in full (1 of 2)
16. The 34 self-tests, in full (2 of 2)
17. How to run it, and what it will not do

# Where Quotes & Proforma sits

Every Medhava app stands on **one shared Data Core**: Item/SKU, Party, Stock, Ledger/Voucher and Order.

## What it reads, and from where

| COMES FROM | WHAT IT SUPPLIES                                      |
|------------|-------------------------------------------------------|
| Catalog    | Every item and its list price                         |
| CRM        | Who the customer is and what they have bought before  |
| Inventory  | Whether the quantity quoted can actually be supplied  |
| Sales      | Takes the confirmed order once the quote is converted |
| Accounting | The proforma and then the invoice                     |

**What this app owns:** the offer, every revision of it, the validity and the expiry. **What it hands over:** a confirmed order — and from that moment the rest of the business takes it.

# The process, end to end

*Five stages, and the clock only runs on the first two.*

- 1 **A quote is raised.** Rates come from the Catalog; the validity is chosen deliberately — 7, 15, 30 or 45 days.
- 2 **Sent.** From this moment it is a promise with an expiry date, and the clock runs on its own.
- 3 **The customer haggles.** Each revision is kept, so what came off the first price stays visible for ever.
- 4 **Accepted.** The expiry stops mattering — the price is now agreed. An accepted quote never expires.
- 5 **Proforma, then confirmed order.** Same lines, same total, one click each. Stock is reserved and the books take over.

## Two rules that pay for the whole app

- ▶ **The expiry is calculated, never stored.** A field somebody has to update is a field that is wrong within a month. This one is the date plus the validity, worked out fresh every time the screen opens.
- ▶ **An expired quote cannot be advanced.** Press it and the app tells you to re-quote instead. Re-quoting carries the lines over at today's date and marks the old one lost — so the history stays honest.
- ▶ **Every revision is kept, including the first.** Adding a revision never changes an earlier one. There is a self-test for exactly that.
- ▶ **The slippage table is the payoff.** One quote losing 10% is a negotiation. Every quote losing 10% is a price list that is 10% too high — and nobody notices unless somebody keeps the first offer.

Both rules are self-tests: "a quote past its validity reads as expired on its own" and "adding a revision does not change the first one".

Marked lost

1 quote - ₹64,293.60

Average quote

₹1,26,341.25

A quote expires by itself the day its validity runs out. Nobody has to remember, and an old price can never be honoured by accident.

What needs a decision

WHAT IS HAPPENING

watch

VQ-303 (Anokhi Boutique (Jaipur)) expired 28 days ago — re-quote it or mark it lost

Open

watch

VQ-301 is on revision 3 — ₹46,410.00 has come off since the first price

Open

What the haggling cost

| QUOTE                                  | REVISIONS | FIRST PRICE | PRICE NOW   | CAME OFF                         |
|----------------------------------------|-----------|-------------|-------------|----------------------------------|
| VQ-301<br>Kalamandir Chain (Hyderabad) | 3         | 2,83,490.00 | 1,57,080.00 | 46,410.00<br>over 10% given away |
| VQ-304<br>Kanchan Sarees (Kolkata)     | 2         | 1,77,660.00 | 1,70,100.00 | 7,560.00<br>some given away      |
| VQ-307<br>Threads & Weaves (Pune)      | 2         | 71,022.00   | 64,293.60   | 6,728.40<br>some given away      |

This table is the reason to keep revisions at all. One quote losing 10% is a negotiation; every quote losing 10% is a price list that is 10% too high, and nobody notices unless somebody keeps the first offer.

Quotes out, accepted, expired unanswered, and what the haggling cost.

Accepted → Proforma → Confirmed order is one click each, and nothing is re-typed. The proforma carries the same lines, the same discount and the same total as the quote the customer said yes to.

Sitting at Draft, with its validity already running.

Rates came from the Catalog. The validity was a deliberate choice from a list — not a free-text field somebody guesses at, and not a company-wide default that fits nobody.

Accepted → Proforma → Confirmed order is one click each, and nothing is re-typed. The proforma carries the same lines, the same discount and the same total as the quote the customer said yes to.

A fresh quote at today's date with the same lines; the old one marked lost.

**Why not just extend the old one?** Because then the record would say you quoted that price today, which is untrue, and the win-rate and slippage figures would quietly stop meaning anything. Re-quoting keeps both honest.

|------------------------|--------|----------|-------------|-----------------------------------|
| 1                      | 60     | 5%       | 2,03,490.00 | First offer                       |
| 2                      | 60     | 9%       | 1,94,922.00 | Revised at the customer's request |
| 3                      | 50     | 12%      | 1,57,080.00 | Revised at the customer's request |
| 4 <span>current</span> | 45     | 14%      | 1,38,159.00 | Revised at the customer's request |

Revision 4 saved

The new price is current; the first one is still there, unchanged.

This is the table that answers a question most businesses cannot. "What did discounting cost us this quarter" needs the first offer to still exist. Keep only the latest and the question is unanswerable — so it stops being asked.

Where every figure comes from

Quotes owns the offer and its revisions. The moment one becomes an order, the rest of the business takes over.

Shared Data Core: Item/SKU · Party · Stock · Ledger/Voucher · Order — every module reads and writes these.

Every figure here, and its source

| FIGURE HERE          | COMES FROM           | HOW IT IS WORKED OUT                                                                         |
|----------------------|----------------------|----------------------------------------------------------------------------------------------|
| Item rate on a quote | Catalog              | Read from the price list, not typed by whoever raised it                                     |
| Line total           | This app             | Quantity × the catalog rate                                                                  |
| Discount             | This app             | A percentage of gross, capped at 50%, kept per revision                                      |
| GST                  | This app + tax rules | 5% of the value after discount, never on the gross                                           |
| Quote total          | This app             | Taxable value + GST, always from the latest revision                                         |
| Expiry date          | This app             | The date raised plus the validity chosen. Worked out, never stored or updated                |
| Expired              | This app             | Any unaccepted quote whose expiry date has passed — decided by the calendar, not by a person |
| What came off        | This app             | The first revision's total minus the current one's                                           |
| Win rate             | This app             | Accepted + (accepted + lost). Expired quotes are not counted as lost until you say so        |
| Confirmed order      | Sales                | The quote leaves this app; stock is reserved and the books take over                         |

Live example — a quote becomes an order

1

A quote is raised. Rates come from the **Catalog**; validity is chosen deliberately.

2

-- **Sent**. From this moment it is a promise with an expiry date, and the clock runs on its own.

3

-- The customer haggles. Each **revision** is kept, so what came off the first price is visible for ever.

4

-- **Accepted**. The expiry stops mattering; the price is now agreed.

5

-- **Proforma**: the same lines, the same total, as a document the customer can pay against.

6

-- **Confirmed order**: it leaves this app and becomes a real order. Stock is reserved and the books take it from there.

Two rules that pay for the whole app

1 · A quote expires by itself.

Nobody has to remember, and nobody can honour a three-month-old price by accident because "we did quote it". The expiry is worked out from the date and the validity you chose — it is not a field somebody has to update.

2 · Every revision is kept.

The customer only sees the latest, but you can always see the first. Without that history, "What did discounting cost us this quarter" is unanswerable — which is why almost nobody asks it.

Both are self-tests:

an out-of-date quote must read as expired, and the first revision must always still be readable.

Revision 4 saved

Every figure, its source, and one quote followed from raised to confirmed order.

# Every figure, and how it is worked out

This is the same table as the Wiring screen, so you have it on paper.

| FIGURE               | COMES FROM           | HOW IT IS WORKED OUT                                                                         |
|----------------------|----------------------|----------------------------------------------------------------------------------------------|
| Item rate on a quote | Catalog              | Read from the price list, not typed by whoever raised it                                     |
| Line total           | This app             | Quantity × the catalog rate                                                                  |
| Discount             | This app             | A percentage of gross, capped at 50%, kept per revision                                      |
| GST                  | This app + tax rules | 5% of the value after discount, never on the gross                                           |
| Quote total          | This app             | Taxable value + GST, always from the latest revision                                         |
| Expiry date          | This app             | The date raised plus the validity chosen. Worked out, never stored or updated                |
| Expired              | This app             | Any unaccepted quote whose expiry date has passed — decided by the calendar, not by a person |
| What came off        | This app             | The first revision's total minus the current one's                                           |
| Win rate             | This app             | Accepted ÷ (accepted + lost). Expired quotes are not counted as lost until you say so        |
| Confirmed order      | Sales                | The quote leaves this app; stock is reserved and the books take over                         |

Every figure is rounded to two decimal places at the moment it is calculated, so a total can never disagree with the rows above it by a stray paisa.

# Connectors — nothing is locked to one company

This is the promise, and the app checks it on itself every time it opens: **no Medhava app depends on any single outside service.** Not one accounting package, not one marketplace, not one AI company, not one automation tool, not one courier.

"Outside services required: 0" is not a marketing line — it is one of this app's self-tests.

# The three rules the app enforces on itself

- 1 **No capability has only one choice.** Every one has at least three; most have eight to twelve.
- 2 **Every capability has a built-in or by-hand option** — so the app is fully usable with **nothing connected at all**. No account anywhere, no internet, no subscription. That is how it ships, and it is the default it starts on.
- 3 **Every capability has an option you can host yourself** — so you are never forced to send your business data to somebody else's cloud, whatever the fashion of the day is.

All three appear as ordinary self-tests on the **Backup & Health** screen, in plain English, alongside the rest — so you can confirm them yourself in five seconds.

**Switching a provider never changes a figure.** The arithmetic lives in Medhava, not in the service. Move from one courier to another and every past shipping record stays exactly as it was — only new labels come from somewhere else. There is a self-test for exactly this: *"switching a provider changes nothing else in your data"*.

## What the four tags on the screen mean

| TAG         | WHAT IT MEANS FOR YOU                                                          |
|-------------|--------------------------------------------------------------------------------|
| built in    | Ships inside Medhava. Needs nothing, costs nothing, works offline.             |
| you host it | You run it on your own machine or server. Your data never leaves your control. |
| their cloud | Somebody else's service, connected with a scoped, revocable key.               |
| by hand     | A person does it, or a CSV goes in and out. Always available.                  |

**Why this rule exists at all.** Software that can only work with one outside company is not a tool you own — it is a bet on somebody else staying cheap, staying available and staying in business. Every capability here has a way out, including a way that needs nobody.

# What this app can be wired to

Quotes & Proforma uses **6** capabilities and offers **62** alternatives across them. Every one is a button on the Connectors screen — click it and you have switched.

| CAPABILITY         | THE OPTIONS, IN FULL                                                                                                                            |
|--------------------|-------------------------------------------------------------------------------------------------------------------------------------------------|
| Email sending      | Download and send it yourself · any SMTP server · Amazon SES · SendGrid · Postmark · Mailgun · Zoho Mail · Brevo                                |
| Customer messaging | Copy and send it yourself · WhatsApp Cloud API · Gupshup · Interakt · MSG91 · Twilio · email instead · Chatwoot (self-hosted)                   |
| Printing           | Browser print / PDF · any ESC/POS thermal printer · Zebra · TVS · no printer at all                                                             |
| Books & ledger     | Medhava Books (built in) · Tally · BUSY · Marg · Zoho Books · QuickBooks · ERPNext (self-hosted) · CSV to your CA                               |
| Files & backups    | This device · a USB drive · MinIO or Nextcloud (self-hosted) · Google Drive · Dropbox · OneDrive · Amazon S3 · Backblaze B2                     |
| Automation         | Medhava Rules (built in) · n8n · Node-RED · Windmill · Airflow (self-hosted) · n8n Cloud · Make · Zapier · Pipedream · cron + webhook · by hand |

**Cloud services use a scoped, revocable key — never your password.** A key can be limited to only what it needs and cancelled in one click from the service's own side, without touching your login. **Medhava will never ask you for a marketplace, bank or account password.** If any screen ever does, it is not Medhava.

## What if the tool you use is not on the list?

Then it becomes one more button. A provider is a small adapter — read from there, write to there — and the app around it does not change, because the arithmetic never lived in the provider. Adding one does not touch a single figure, a single screen or a single self-test.

| WHEN A PROVIDER IS ADDED OR SWAPPED | WHAT HAPPENS                                                                |
|-------------------------------------|-----------------------------------------------------------------------------|
| Your existing records               | Untouched. Nothing is migrated, because nothing was stored in the provider. |
| Every figure on every screen        | Identical — there is a self-test that proves this.                          |
| Your saved work and settings        | Untouched.                                                                  |
| The self-tests                      | Same list, same names, still passing.                                       |
| What you have to relearn            | Nothing. The screens do not change.                                         |

**The practical version of the promise:** if a service you use doubles its price, changes its terms, or shuts down, you click a different button. You do not change software, you do not re-enter data, and you do not lose a day.

# The 34 self-tests, in full (1 of 2)

These run every time the app opens, **before** anything is shown. Menu → **Backup & Health** to see them live. They are written in plain language on purpose — you should be able to read what was checked.

| RESULT | WHAT WAS CHECKED                                        |
|--------|---------------------------------------------------------|
| ✓ pass | a line total = quantity × rate                          |
| ✓ pass | the discount comes off before GST                       |
| ✓ pass | a quote total = taxable + GST                           |
| ✓ pass | no quote carries a discount over 50%                    |
| ✓ pass | a discount over 50% would be clamped, not applied       |
| ✓ pass | every quote has at least one revision                   |
| ✓ pass | the current figures come from the latest revision       |
| ✓ pass | the first revision is always still readable             |
| ✓ pass | what came off = first price – price now                 |
| ✓ pass | a quote never revised has given nothing away            |
| ✓ pass | total slippage counts only revised quotes               |
| ✓ pass | adding a revision does not change the first one         |
| ✓ pass | the expiry date = the date raised + the validity        |
| ✓ pass | a quote past its validity reads as expired on its own   |
| ✓ pass | an accepted quote never expires                         |
| ✓ pass | nothing is both open and expired                        |
| ✓ pass | "expiring soon" is only quotes with 3 days or less left |

## The 34 self-tests, in full (2 of 2)

Continued. The last group are the **Connectors** checks — the ones that keep the no-lock-in promise honest.

| RESULT | WHAT WAS CHECKED                                                    |
|--------|---------------------------------------------------------------------|
| ✓ pass | every quote is in exactly one state                                 |
| ✓ pass | open value counts only draft and sent quotes                        |
| ✓ pass | win rate = accepted ÷ (accepted + lost)                             |
| ✓ pass | a lost quote is never counted as won                                |
| ✓ pass | a converted order is also counted as won                            |
| ✓ pass | accepting a quote does not change its total                         |
| ✓ pass | a proforma carries the same total as the accepted quote             |
| ✓ pass | a quote that has become an order cannot be marked lost              |
| ✓ pass | every capability this app uses is a known one                       |
| ✓ pass | no capability offers only one choice                                |
| ✓ pass | every capability works with nothing connected (built-in or by hand) |
| ✓ pass | every capability has an option you can host yourself                |
| ✓ pass | exactly one provider is active per capability                       |
| ✓ pass | the default provider never needs an outside service                 |
| ✓ pass | no single company is unavoidable across capabilities                |
| ✓ pass | switching a provider changes which one is active                    |
| ✓ pass | switching a provider changes nothing else in your data              |

**If you ever see a red "fail", stop trusting the numbers on screen.** Take a backup, reload the file, and report which line failed. Software that tells you when it is broken is worth more than software that is quietly wrong.

# How to run it, and what it will not do

## Running it

1. **Windows:** extract the ZIP, then double-click `Quotes_Proforma.html`. It opens in your browser. That is the whole installation.
2. **Mac:** unpack the ZIP, double-click the file. Safari opens it.
3. **Android:** Files app → Downloads → tap the file → open with Chrome. Then : → **Add to Home screen**.
4. **iPhone / iPad:** Files app → tap the file → Safari. Then Share → **Add to Home Screen**.
5. No internet needed, ever. No account, no licence key, no setup wizard.

## Keeping your data safe

Everything you enter lives in your own browser on your own device — nowhere else, and never on anybody's server. That means nobody can see it, and also that clearing your browser's site data would erase it. So: **Backup & Health** → **Export JSON**, once a week. To move to another device, take the file and the backup with you and use **Import JSON**.

Backup & Health — your data controls, and the live test results below them.

## What it will not do

- ▶ It does not email the quote itself — it produces it; you send it however you like.
- ▶ It does not negotiate for you, and it will not stop you giving 50% away. It only makes the cost visible.
- ▶ It does not check stock before quoting; a quantity you cannot supply is your judgement, not an arithmetic error.
- ▶ In this single-file form nothing is connected live to email — see the Connectors screen for every option.

**Accepted when: the app opens by double-click with no internet · all 34 self-tests show pass · a quote past its validity reads as expired without anybody touching it · an expired quote cannot be advanced but can be re-quoted · a revision is saved without changing the first one · a proforma carries the same total as the accepted quote · a backup exports and imports cleanly.**
