

VASTRANGAM — ETHNIC-WEAR D2C + MARKETPLACE

Marketplace OMS

Seven seller panels, one queue — and what each channel actually pays you

Module 04 · E-commerce / OMS — App 1 of 2

Every marketplace order for Vastrangam in one queue. The queue is sorted by how little time is left before that panel's dispatch window closes — not by when the order came in — because Amazon gives you 12 hours and Ajio gives you 48, and remembering which is which at 6pm on a festive Friday is exactly what gets an account rated down. Commission is worked out on every order the ...

39 / 39 self-tests pass

Gross is never shown as if it were yours

What this is, and what is inside

Every marketplace order in **one queue**, sorted by how little time is left before that panel's dispatch window closes — not by when the order arrived.

Each marketplace gives you a different number of hours. Amazon 12, Flipkart 24, Ajio 48. Seven panels means seven clocks, and at six o'clock on a festive Friday nobody is holding all seven in their head. One queue holds them for you, and the most urgent order is always at the top — whichever panel it came from.

The commission is worked out on every order the moment it lands. A saree showing ₹4,999 on a 30% panel pays you about ₹3,424 after the shipping fee. No screen in this app will ever show you the ₹4,999 as though it were yours, because a 30% channel and a 12% channel are not comparable at gross.

Stock is one number every panel reads. Selling the last piece on one marketplace removes it from the other six in the same instant, instead of turning into a cancellation three hours later — and a cancellation is what actually damages the account rating.

Price parity is checked across every panel. The marketplaces read each other's prices; the same item quietly listed 17% cheaper on one gets your dearer listings suppressed, on a channel you are paying 28% to be visible on.

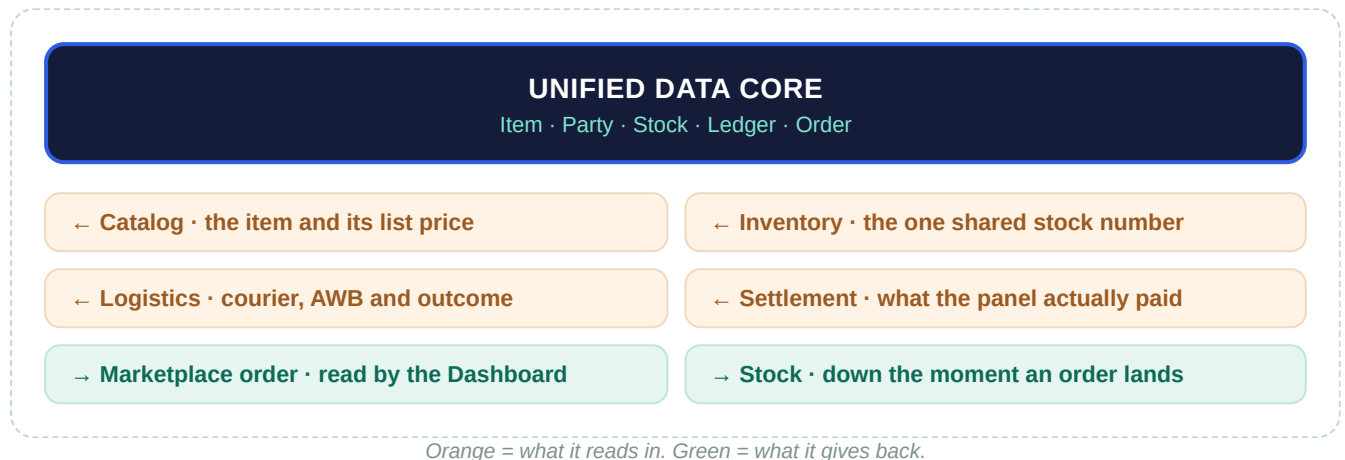

The comparison this app exists to make is on the **Marketplace P&L** screen: sorted by what reaches your bank rather than by what was invoiced. It is almost never the same ranking.

18. The 39 self-tests, in full (2 of 2)
19. How to run it, and what it will not do

Where Marketplace OMS sits

Every Medhava app stands on **one shared Data Core**: Item/SKU, Party, Stock, Ledger/Voucher and Order.

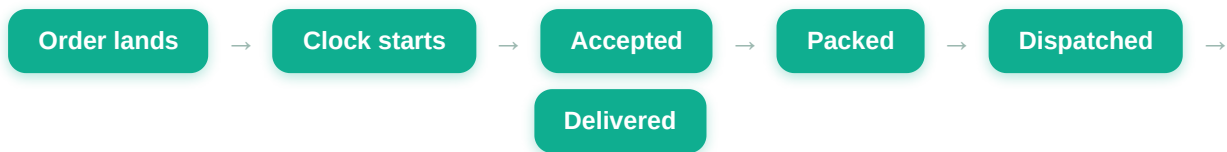

What it reads, and from where

COMES FROM	WHAT IT SUPPLIES
Catalog	The design, its website list price and which panels it is listed on
Inventory	The one stock number all seven panels read
Logistics	The courier, the AWB and whether the parcel was accepted
Settlement	What each panel actually paid, to check against the expected payout
Accounting & GST	Where the sale, the commission and the fee land in the books

What this app owns: the marketplace order, its dispatch clock, the commission arithmetic and the per-panel price. **What it only reads:** the list price, the one stock number and whether the parcel was delivered.

The process, end to end

Six steps. The clock runs from the first, on that panel's own window.

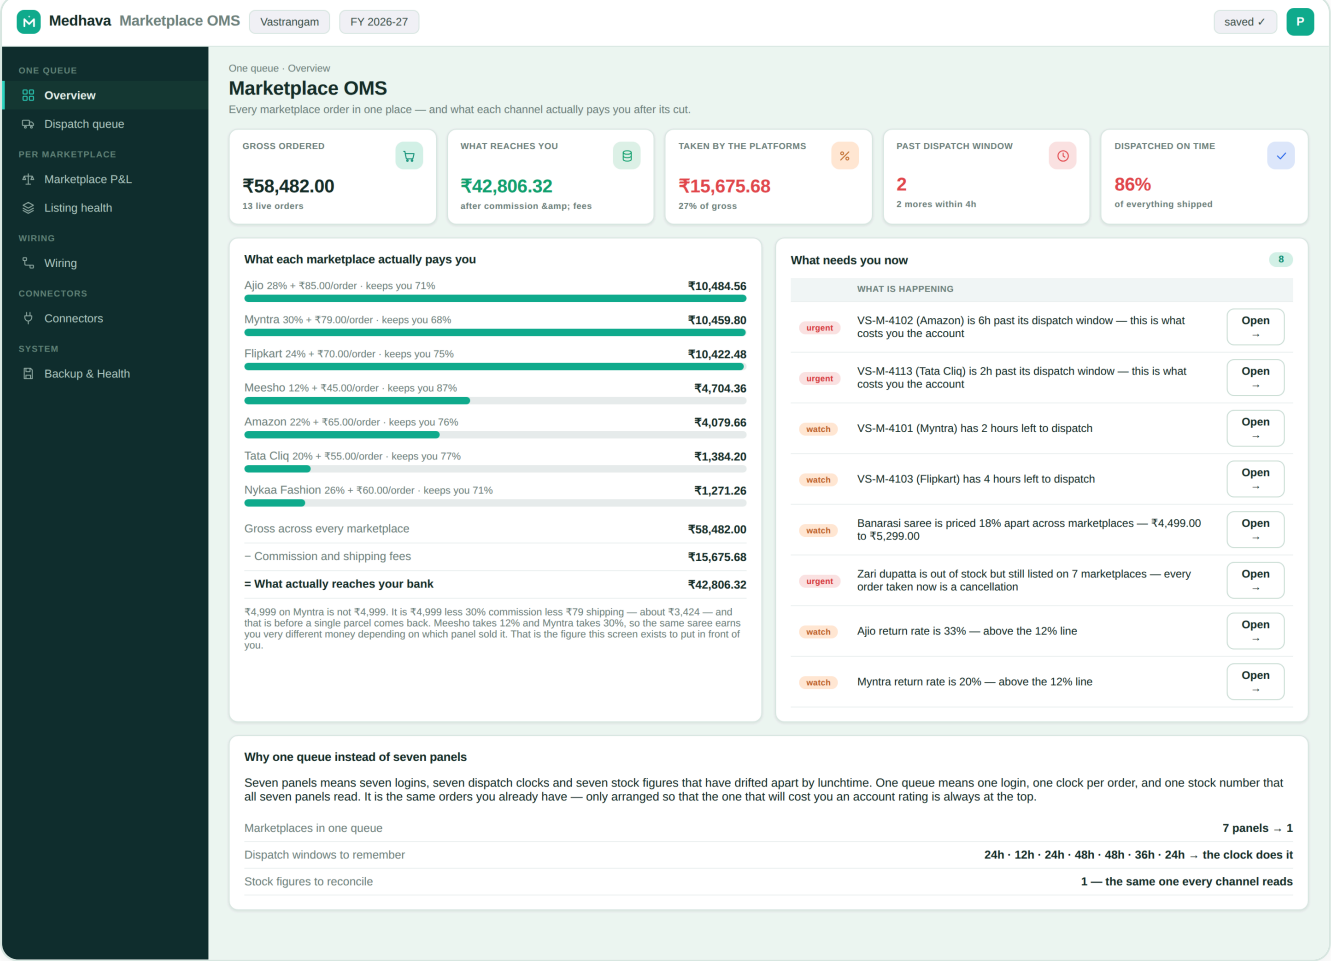

- 1 **An order arrives from a panel.** It joins one queue, not a seventh list, and stock falls on the shared number immediately.
- 2 **Its dispatch clock starts** on that marketplace's own window, and the queue re-sorts itself so the least time left sits at the top.
- 3 **Accepted.** The commission and shipping fee are already worked out, so you are looking at your share and not at the gross.
- 4 **Packed.** One stage at a time — nothing jumps, which is the only reason the on-time figure means anything.
- 5 **Dispatched inside the window**, or it appears on the Overview as a breach with the hours it is past.
- 6 **Delivered.** If it comes back, the return lands against *that panel's* rate — which is how the P&L screen stays honest.

The three things this app refuses to let happen

- ▶ **An order cannot be dispatched out of nowhere.** It moves one stage at a time, so the on-time figure is real rather than back-filled at the end of the week.
- ▶ **Stock is never per-panel.** One number. Selling the last piece on one marketplace removes it from every other one in the same instant.
- ▶ **Gross is never shown as if it were yours.** Every screen carries the commission beside it — because the channel that sells most is frequently not the channel that pays most.
- ▶ **A return is counted against the panel it came from.** A 25% channel with a 15% return rate is not a 25% cost; it is closer to 40% once the parcels coming back are counted.

All of these are self-tests. If any one of them stops being true, the app tells you on the **Backup & Health** screen the next time it opens.

Screen - Overview

Gross ordered against what actually reaches you, panel by panel.

Reading it in twenty seconds

- 1 Gross ordered** versus **What reaches you**. The gap is the commission and the shipping fees — usually a quarter of the invoice, and almost never on one screen anywhere else.
- 2 Past dispatch window**. Not "late orders" in general — orders past *their own* panel's window, which is the number that costs you the account rating.
- 3 The bars**. Each panel by what it pays you, with the percentage it lets you keep written beside it.

Everything waiting to go out

TIME LEFT	ORDER	MARKETPLACE	ITEM	GROSS	THEIR CUT	YOU GET	STAGE	
6h LATE	VS-M-4102 Rohit Verma	Amazon 12h window	Cotton kurta set 2 × ₹1,799.00	3,598.00	856.56	2,741.44	Accepted	Mark packed -- Cancel
2h LATE	VS-M-4113 Pooja Menon	Tata Cliq 24h window	Cotton kurta set 1 × ₹1,799.00	1,799.00	414.80	1,384.20	Packed	Mark dispatched -- Cancel
2h left	VS-M-4101 Ananya Rao	Myntra 24h window	Banarasi saree 1 × ₹4,999.00	4,999.00	1,578.70	3,420.30	To accept	Mark accepted -- Cancel
4h left	VS-M-4103 Sneha Iyer	Flipkart 24h window	Zari dupatta 1 × ₹899.00	899.00	285.76	613.24	Packed	Mark dispatched -- Cancel
8h left	VS-M-4105 Divya Nair	Nykaa Fashion 48h window	Cotton kurta set 1 × ₹1,799.00	1,799.00	527.74	1,271.26	Accepted	Mark packed -- Cancel
18h left	VS-M-4104 Karan Mehta	Ajio 48h window	Bridal lehenga 1 × ₹12,999.00	12,999.00	3,724.72	9,274.28	To accept	Mark accepted -- Cancel

The queue is sorted by time left, not by order date. A Myntra order placed an hour ago can be more urgent than an Amazon order from yesterday, because the windows are different — and remembering that per panel is exactly what goes wrong at 6pm.

Already out

7

ORDER	MARKETPLACE	YOU GET	DISPATCHED IN		STAGE	
VS-M-4106	Meesho	4,704.36	30h	within window	Dispatched	
VS-M-4107	Myntra	3,420.30	20h	within window	Delivered	Came back
VS-M-4108	Amazon	1,338.22	16h	was late	Delivered	Came back
VS-M-4111	Myntra	1,179.60	18h	within window	Delivered	Came back
VS-M-4114	Flipkart	9,809.24	22h	within window	Delivered	Came back
VS-M-4115	Myntra	2,439.60	20h	within window	Delivered	Came back
VS-M-4116	Ajio	1,210.28	44h	within window	Delivered	Came back

Every order still to go out, least time left first.

This sort order is the whole app. An order placed an hour ago on a 12-hour panel is more urgent than one from yesterday on a 48-hour panel. Sorting by order date — which is what every seller panel does — gets that backwards every single time.

WORST RETURNS

Ajio

33% came back

Every marketplace, side by side

MARKETPLACE	COMMISSION	SHIP FEE	WINDOW	ORDERS	GROSS	YOU KEEP	KEEP %	RETURNS	LATE
Ajio	28%	85.00	48h	2	14,798.00	10,484.56	71%	33%	— returns are eating it
Myntra	30%	79.00	24h	4	15,394.00	10,459.80	68%	20%	— returns are eating it
Flipkart	24%	70.00	24h	2	13,898.00	10,422.48	75%	0%	— expensive channel
Meesho	12%	45.00	36h	1	5,397.00	4,704.36	87%	0%	— worth the work
Tata Cliq	20%	55.00	24h	1	1,799.00	1,384.20	77%	0%	1 expensive channel
Amazon	22%	65.00	12h	1	1,799.00	1,338.22	74%	0%	— expensive channel
Nykaa Fashion	26%	60.00	48h	1	1,799.00	1,271.26	71%	0%	— expensive channel

The comparison nobody makes

Myntra will almost always be your biggest channel by gross. Once 30% commission and a 20% return rate come off, it is frequently not your biggest channel by money in the bank. Meesho at 12% on smaller tickets often beats it. This screen sorts by payout, which is why the order here surprises people.

Gross across every marketplace	₹54,884.00
— Commission and shipping fees	₹14,819.12
= Reaches your bank	₹40,064.88
Value that came back as returns	₹6,798.00

A channel with a 25% commission and a 15% return rate is not a 25% cost — it is closer to 40% once you count the parcels that come back at your expense.

Cancelled — stock returned

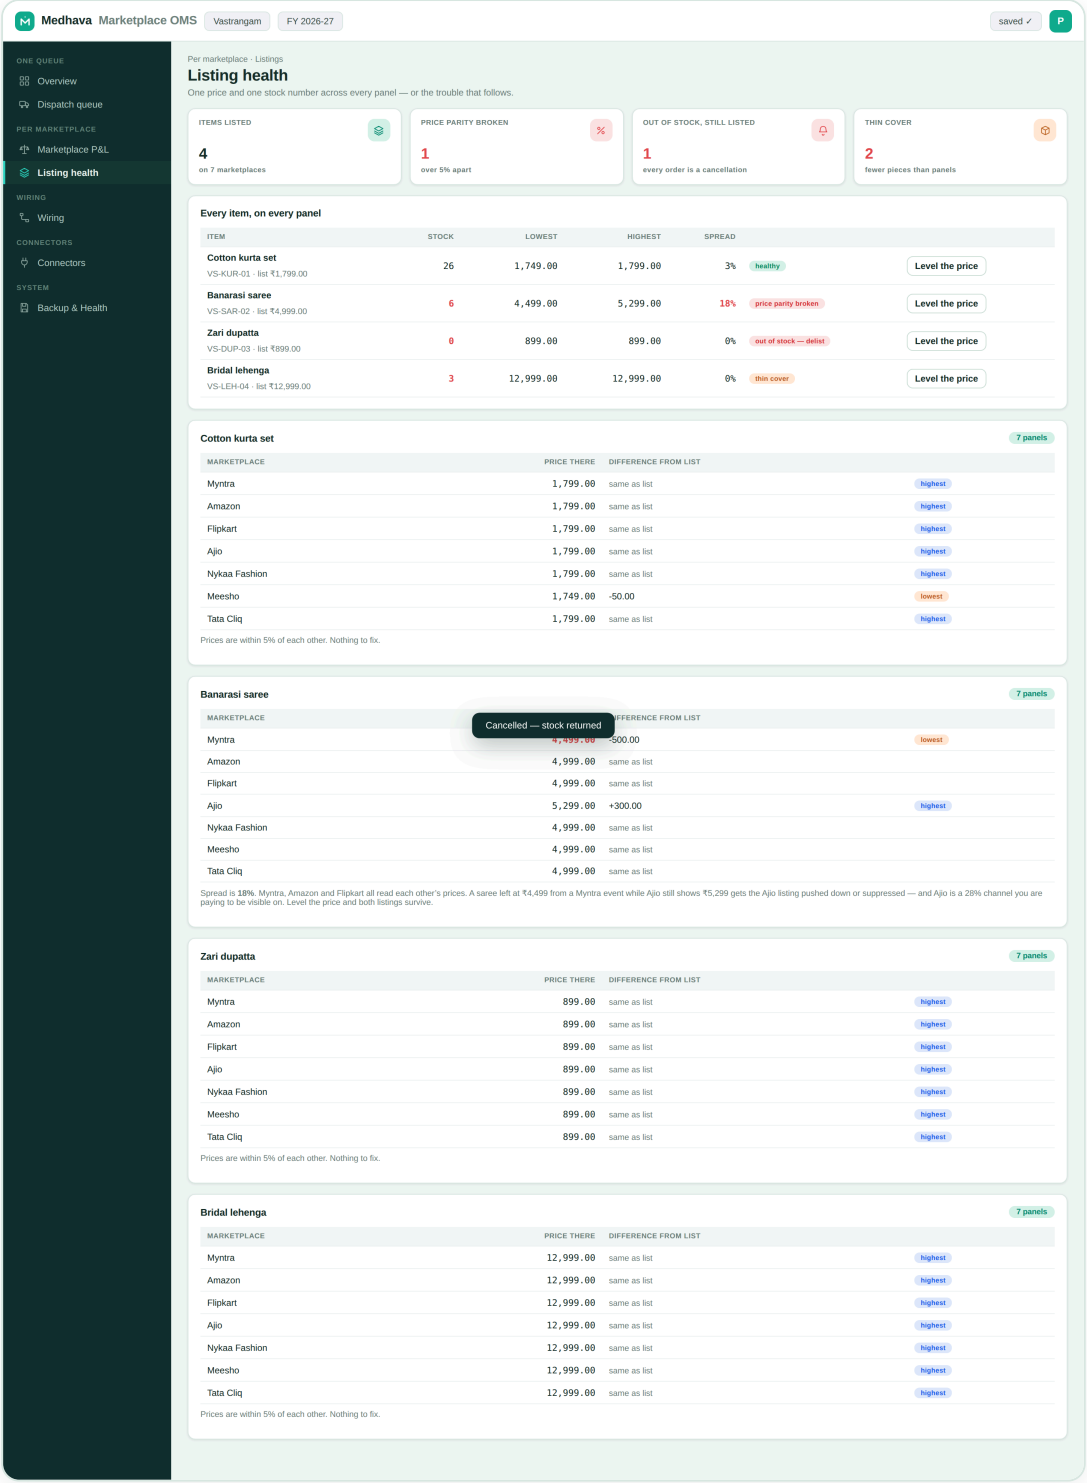

Every panel side by side: commission, fee, window, keep %, return %, late count.

This is the comparison nobody makes. The biggest channel by gross is frequently not the biggest by money in the bank. Sorted by payout, the order on this screen surprises people — which is exactly why it is sorted that way.

Medhava · Marketplace OMS — Vastrangam — ethnic-wear D2C + marketplace

9 / 20

Screen · Listing health

One price and one stock number across every panel — or the trouble that follows.

Three problems are called out by name: **price parity broken** (the same item priced apart across panels), **out of stock but still listed** (every order taken is a cancellation), and **thin cover** (fewer pieces in stock than panels selling them).

Levelling a price across every panel

Flipkart	1,799.00	same as list	highest
Ajo	1,799.00	same as list	highest
Nykaa Fashion	1,799.00	same as list	highest
Meesho	1,749.00	-50.00	lowest
Tata Cliq	1,799.00	same as list	highest

Prices are within 5% of each other. Nothing to fix.

Banarasi saree

7 panels

Every panel set to the list price of ₹4,999.00

MARKETPLACE	PRICE THERE	DIFFERENCE FROM LIST	
Myntra	4,999.00	same as list	highest
Amazon	4,999.00	same as list	highest
Flipkart	4,999.00	same as list	highest
Ajo	4,999.00	same as list	highest
Nykaa Fashion	4,999.00	same as list	highest
Meesho	4,999.00	same as list	highest
Tata Cliq	4,999.00	same as list	highest

Prices are within 5% of each other. Nothing to fix.

Zari dupatta

7 panels

MARKETPLACE	PRICE THERE	DIFFERENCE FROM LIST	
Myntra	899.00	same as list	highest
Amazon	899.00	same as list	highest
Flipkart	899.00	same as list	highest
Ajo	899.00	same as list	highest
Nykaa Fashion	899.00	same as list	highest
Meesho	899.00	same as list	highest
Tata Cliq	899.00	same as list	highest

Prices are within 5% of each other. Nothing to fix.

Bridal lehenga

7 panels

MARKETPLACE	PRICE THERE	DIFFERENCE FROM LIST	
Myntra	12,999.00	same as list	highest
Amazon	12,999.00	same as list	highest
Flipkart	12,999.00	same as list	highest
Ajo	12,999.00	same as list	highest
Nykaa Fashion	12,999.00	same as list	highest
Meesho	12,999.00	same as list	highest
Tata Cliq	12,999.00	same as list	highest

Prices are within 5% of each other. Nothing to fix.

One click put all seven panels back on the catalog list price.

Why this matters more than it looks. Marketplaces read each other. A saree left at a discount from an event three weeks ago, while another panel still shows full price, gets the dearer listing pushed down or suppressed — on a channel you are paying a high commission to be visible on.

A return, against the panel it came from

Where every figure comes from

Marketplace OMS owns the queue and the fee arithmetic. Stock and price it shares with every other channel.

Shared Data Core: Item/SKU · Party · Stock · Ledger/Voucher · Order — every module reads and writes these.

Every figure here, and its source

FIGURE HERE	COMES FROM	HOW IT IS WORKED OUT
Gross ordered	This app (it owns the marketplace order)	Every live order: quantity × rate
Commission	Panel rate card in this app	That panel's percentage of the order's gross — Myntra 30%, Meesho 12%, and so on
Shipping fee	Panel rate card in this app	A flat per-order fee, set per panel
What reaches you	This app	Gross – commission – shipping fee, worked out per order and never stored
Time left to dispatch	This app	That panel's dispatch window minus the order's age in hours — Amazon 12h, Ajio 48h
Past the window	This app	An order still to dispatch whose time left has gone below zero
Stock	Inventory & Catalog (one shared number)	Falls on sale; comes back on a cancellation or a return
Price on each panel	Catalog + per-panel override	List price unless a panel override exists; the spread is highest minus lowest
Returns	This app + Logistics	Recorded against the panel it came from, at that panel's commission rate
Settlement	Settlement	This app says what the payout should be; Settlement checks what Myntra actually paid
Books	Accounting & GST	Sale at gross, commission and fee as expenses — so the ledger and the settlement agree

Live example — one marketplace order

1

An order arrives from **Myntra**. It joins **one queue**, not a seventh panel.

2

→ Its **dispatch clock** starts on that marketplace's own window, and the queue re-sorts itself.

3

→ **Stock falls** on the one shared number, so no other panel can sell the same piece.

4

→ The **commission and shipping fee** are worked out immediately, so you see your share and not the gross.

5

→ **Dispatched** inside the window, or it appears on the Overview as a breach.

6

→ If it comes back, the return lands against **that marketplace's** rate — which is how the P&L screen stays honest.

The three things this app refuses to let happen

1

An order cannot be dispatched out of nowhere. It moves one stage at a time, so the on-time figure is real rather than back-filled.

2

Stock is never per-panel. One number. Selling the last piece on Amazon removes it from Flipkart in the same instant.

3

Gross is never shown as if it were yours. Every screen shows the commission alongside it, because a 25% channel and a 5% channel are not comparable at gross.

All three are self-tests, so the app tells you on startup if any of them stops being true.

Return recorded against Myntra

Every figure, its source, and one marketplace order followed through six consequences.

Every figure, and how it is worked out

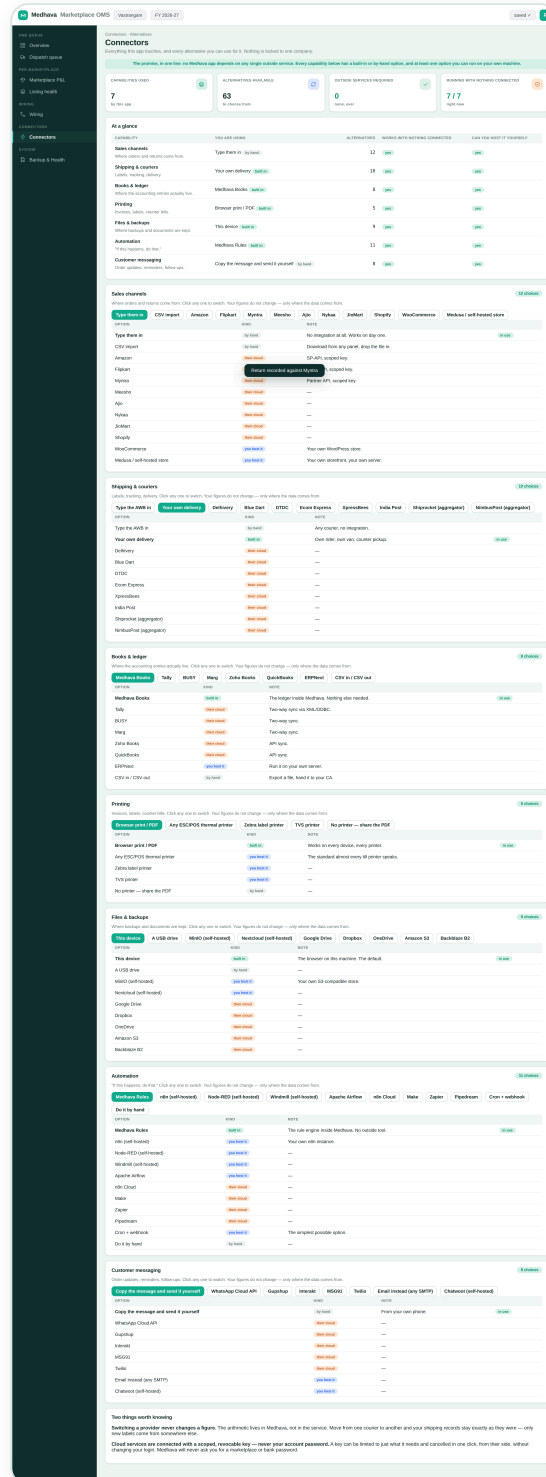

This is the same table as the Wiring screen, so you have it on paper.

FIGURE	COMES FROM	HOW IT IS WORKED OUT
Gross ordered	This app (it owns the marketplace order)	Every live order: quantity × rate
Commission	Panel rate card in this app	That panel's percentage of the order's gross — Myntra 30%, Meesho 12%, and so on
Shipping fee	Panel rate card in this app	A flat per-order fee, set per panel
What reaches you	This app	Gross – commission – shipping fee, worked out per order and never stored
Time left to dispatch	This app	That panel's dispatch window minus the order's age in hours — Amazon 12h, Ajio 48h
Past the window	This app	An order still to dispatch whose time left has gone below zero
Stock	Inventory & Catalog (one shared number)	Falls on sale; comes back on a cancellation or a return
Price on each panel	Catalog + per-panel override	List price unless a panel override exists; the spread is highest minus lowest
Returns	This app + Logistics	Recorded against the panel it came from, at that panel's commission rate
Settlement	Settlement	This app says what the payout should be; Settlement checks what Myntra actually paid
Books	Accounting & GST	Sale at gross, commission and fee as expenses — so the ledger and the settlement agree

Every figure is rounded to two decimal places at the moment it is calculated, so a total can never disagree with the rows above it by a stray paisa.

Connectors — nothing is locked to one company

This is the promise, and the app checks it on itself every time it opens: **no Medhava app depends on any single outside service.** Not one accounting package, not one marketplace, not one AI company, not one automation tool, not one courier.

"Outside services required: 0" is not a marketing line — it is one of this app's self-tests.

The three rules the app enforces on itself

- 1 No capability has only one choice.** Every one has at least three; most have eight to twelve.
- 2 Every capability has a built-in or by-hand option** — so the app is fully usable with **nothing connected at all**. No account anywhere, no internet, no subscription. That is how it ships, and it is the default it starts on.
- 3 Every capability has an option you can host yourself** — so you are never forced to send your business data to somebody else's cloud, whatever the fashion of the day is.

All three appear as ordinary self-tests on the **Backup & Health** screen, in plain English, alongside the rest — so you can confirm them yourself in five seconds.

Switching a provider never changes a figure. The arithmetic lives in Medhava, not in the service. Move from one courier to another and every past shipping record stays exactly as it was — only new labels come from somewhere else. There is a self-test for exactly this: *"switching a provider changes nothing else in your data"*.

What the four tags on the screen mean

TAG	WHAT IT MEANS FOR YOU
built in	Ships inside Medhava. Needs nothing, costs nothing, works offline.
you host it	You run it on your own machine or server. Your data never leaves your control.
their cloud	Somebody else's service, connected with a scoped, revocable key.
by hand	A person does it, or a CSV goes in and out. Always available.

Why this rule exists at all. Software that can only work with one outside company is not a tool you own — it is a bet on somebody else staying cheap, staying available and staying in business. Every capability here has a way out, including a way that needs nobody.

What this app can be wired to

Marketplace OMS uses **7** capabilities and offers **73** alternatives across them. Every one is a button on the Connectors screen — click it and you have switched.

CAPABILITY	THE OPTIONS, IN FULL
Sales channels	Type them in · CSV import · Amazon · Flipkart · Myntra · Meesho · Ajio · Nykaa · JioMart · Shopify · WooCommerce · your own store
Shipping & couriers	Type the AWB in · your own delivery · Delhivery · Blue Dart · DTDC · Ecom · XpressBees · India Post · Shiprocket · NimbusPost
Books & ledger	Medhava Books (built in) · Tally · BUSY · Marg · Zoho Books · QuickBooks · ERPNext (self-hosted) · CSV to your CA
Printing	Browser print / PDF · any ESC/POS thermal printer · Zebra · TVS · no printer at all
Files & backups	This device · a USB drive · MinIO or Nextcloud (self-hosted) · Google Drive · Dropbox · OneDrive · Amazon S3 · Backblaze B2
Automation	Medhava Rules (built in) · n8n · Node-RED · Windmill · Airflow (self-hosted) · n8n Cloud · Make · Zapier · Pipedream · cron + webhook · by hand
Customer messaging	Copy and send it yourself · WhatsApp Cloud API · Gupshup · Interakt · MSG91 · Twilio · email instead · Chatwoot (self-hosted)

Cloud services use a scoped, revocable key — never your password. A key can be limited to only what it needs and cancelled in one click from the service's own side, without touching your login. **Medhava will never ask you for a marketplace, bank or account password.** If any screen ever does, it is not Medhava.

What if the tool you use is not on the list?

Then it becomes one more button. A provider is a small adapter — read from there, write to there — and the app around it does not change, because the arithmetic never lived in the provider. Adding one does not touch a single figure, a single screen or a single self-test.

WHEN A PROVIDER IS ADDED OR SWAPPED	WHAT HAPPENS
Your existing records	Untouched. Nothing is migrated, because nothing was stored in the provider.
Every figure on every screen	Identical — there is a self-test that proves this.
Your saved work and settings	Untouched.
The self-tests	Same list, same names, still passing.
What you have to relearn	Nothing. The screens do not change.

The practical version of the promise: if a service you use doubles its price, changes its terms, or shuts down, you click a different button. You do not change software, you do not re-enter data, and you do not lose a day.

The 39 self-tests, in full (1 of 2)

These run every time the app opens, **before** anything is shown. Menu → **Backup & Health** to see them live. They are written in plain language on purpose — you should be able to read what was checked.

RESULT	WHAT WAS CHECKED
✓ pass	gross = quantity × rate
✓ pass	commission = that marketplace's percentage of gross
✓ pass	payout = gross – commission – shipping fee
✓ pass	payout is never more than gross
✓ pass	what the platforms take = gross – payout
✓ pass	two marketplaces with different commission pay differently on the same order
✓ pass	every marketplace has a commission, a ship fee and a dispatch window
✓ pass	every order belongs to a marketplace that exists
✓ pass	time left = that marketplace's window minus the order's age
✓ pass	a breach is an undispached order past its own window
✓ pass	an order already dispatched is never called a breach
✓ pass	the at-risk list is only orders with 4 hours or less left
✓ pass	the queue is sorted with the least time left first
✓ pass	the queue holds every order still to dispatch
✓ pass	a marketplace with a shorter window can outrank an older order
✓ pass	every live order sits in a real stage
✓ pass	a cancelled or returned order is in no total
✓ pass	cancelling an order gives the stock back
✓ pass	a return is recorded against the marketplace it came from
✓ pass	marketplace grosses add up to the whole gross

The 39 self-tests, in full (2 of 2)

Continued. The last group are the **Connectors** checks — the ones that keep the no-lock-in promise honest.

RESULT	WHAT WAS CHECKED
✓ pass	marketplace payouts add up to the whole payout
✓ pass	every live order is counted once across the marketplaces
✓ pass	keep % = payout ÷ gross for that marketplace
✓ pass	a marketplace with no orders shows nothing rather than a false zero-percent
✓ pass	every item is listed on every marketplace
✓ pass	the spread is the highest price minus the lowest
✓ pass	parity is only called broken above the 5% line
✓ pass	levelling a price puts every panel on the list price
✓ pass	an out-of-stock item still listed is raised as urgent
✓ pass	stock is one number per item, not one per marketplace
✓ pass	every capability this app uses is a known one
✓ pass	no capability offers only one choice
✓ pass	every capability works with nothing connected (built-in or by hand)
✓ pass	every capability has an option you can host yourself
✓ pass	exactly one provider is active per capability
✓ pass	the default provider never needs an outside service
✓ pass	no single company is unavoidable across capabilities
✓ pass	switching a provider changes which one is active
✓ pass	switching a provider changes nothing else in your data

If you ever see a red "fail", stop trusting the numbers on screen. Take a backup, reload the file, and report which line failed. Software that tells you when it is broken is worth more than software that is quietly wrong.

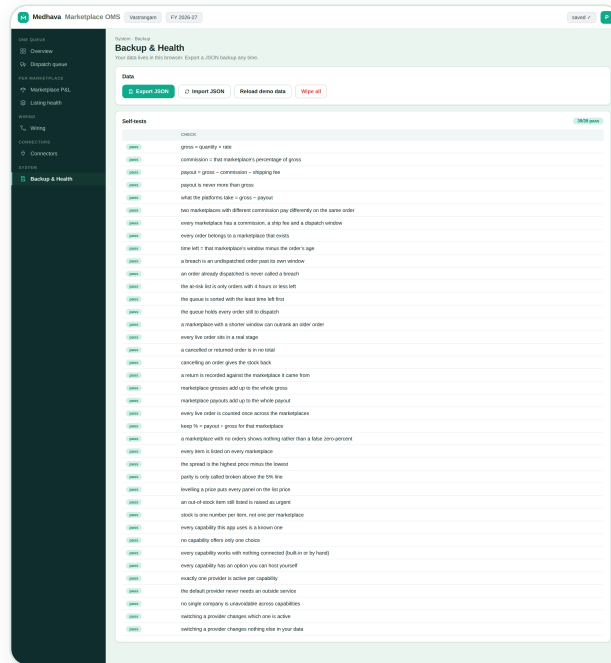

How to run it, and what it will not do

Running it

1. **Windows:** extract the ZIP, then double-click `Marketplace_OMS.html`. It opens in your browser. That is the whole installation.
2. **Mac:** unpack the ZIP, double-click the file. Safari opens it.
3. **Android:** Files app → Downloads → tap the file → open with Chrome. Then : → **Add to Home screen**.
4. **iPhone / iPad:** Files app → tap the file → Safari. Then Share → **Add to Home Screen**.
5. No internet needed, ever. No account, no licence key, no setup wizard.

Keeping your data safe

Everything you enter lives in your own browser on your own device — nowhere else, and never on anybody's server. That means nobody can see it, and also that clearing your browser's site data would erase it. So: **Backup & Health** → **Export JSON**, once a week. To move to another device, take the file and the backup with you and use **Import JSON**.

Backup & Health — your data controls, and the live test results below them.

What it will not do

- ▶ It does not log into a seller panel for you — it is the one place the orders from all of them are worked. The Connectors screen lists every way to get them in.
- ▶ It does not set your prices; it tells you when the same item has drifted apart across panels, and levels them on one click when you decide to.
- ▶ It does not reconcile the money that actually arrived — that is the Settlement module. This app says what the payout *should* be.
- ▶ It will not stop you listing something you cannot ship. It checks its own arithmetic, not your judgement.

Accepted when: the app opens by double-click with no internet · all 39 self-tests show pass · the queue is sorted by time left rather than order date · advancing an order moves exactly one stage · cancelling gives the stock back · levelling a price puts every panel on the list price · a return is recorded against the panel it came from · a backup exports and imports cleanly.
