B2B & Credit

Tier pricing, a real credit limit, and ageing against each buyer's own terms

Module 03 · Sales — App 2 of 5

The buy-in-bulk side of selling. Every buyer sits on a tier, and the tier decides the rate — nobody types a price, so the price list cannot quietly fall apart. Every buyer has a credit limit, and the check on it is a gate rather than a warning: an order that would take a buyer over their limit goes on hold instead of being approved. It is not lost, and it is not silently allowe...

35 / 35 self-tests pass

Over the limit, nothing ships

What this is, and what is inside

The buy-in-bulk side of selling, and two rules that decide whether it makes money or quietly loses it.

The price is the tier, not a negotiation. Every buyer sits on a tier, and the tier decides the discount off your list price. Nobody types a rate, so the price list cannot fall apart one "just this once" at a time.

The credit check is a gate, not a warning. An order that would take a buyer over their limit goes **on hold**. It is not lost, and it is not silently approved either — somebody has to collect money or raise the limit on purpose.

Ageing is measured against **each buyer's own agreed terms**, so a 45-day buyer is never called late on day 31 and a 15-day buyer is not given 30 days by accident. Most software uses one fixed number for everybody and gets both wrong.

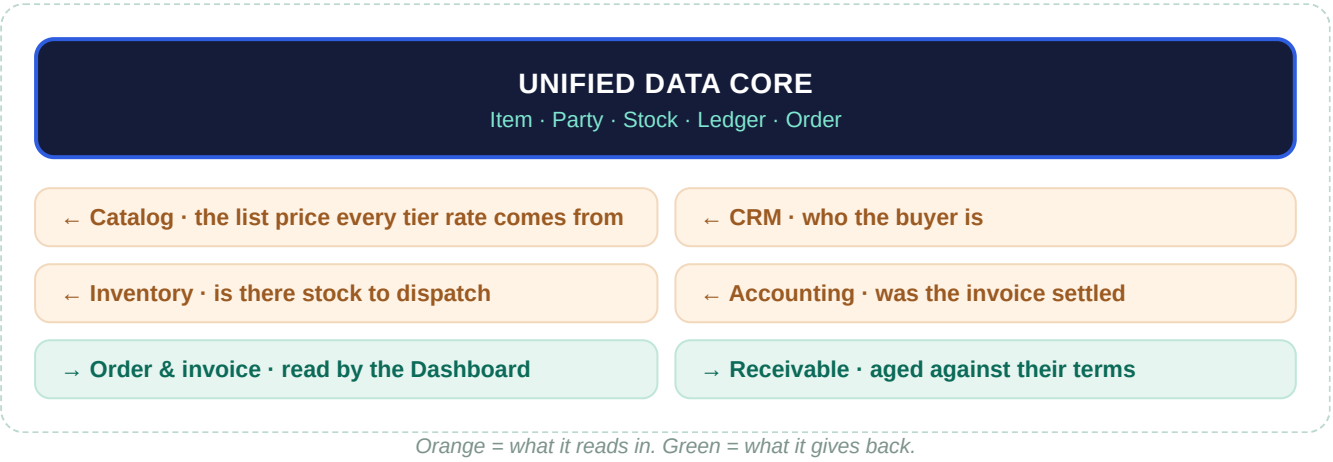

And a buyer with plenty of headroom left but a 90-day-old invoice is **still stopped**. Headroom on its own is a half-answer.

What this document covers

1. What this is, and what is inside

11. Every figure, and how it is worked out
12. Connectors — nothing is locked to one company
13. The three rules the app enforces on itself
14. What this app can be wired to
15. The 35 self-tests, in full (1 of 2)
16. The 35 self-tests, in full (2 of 2)
17. How to run it, and what it will not do

Where B2B & Credit sits

Every Medhava app stands on **one shared Data Core**: Item/SKU, Party, Stock, Ledger/Voucher and Order.

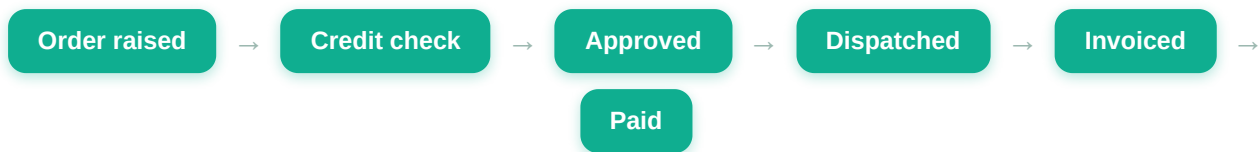

What it reads, and from where

COMES FROM	WHAT IT SUPPLIES
Catalog	The list price every tier rate is worked out from
CRM	Who the buyer is and their trading history
Inventory	Whether there is stock to dispatch
Accounting	Whether the invoice was actually settled
Logistics	The dispatch and the delivery proof

What this app owns: the wholesale order, the tier rate applied to it, and the credit decision. **What it only reads:** the list price, the stock and whether the money arrived.

The process, end to end

The gate is the second step. Everything after it is money at risk.

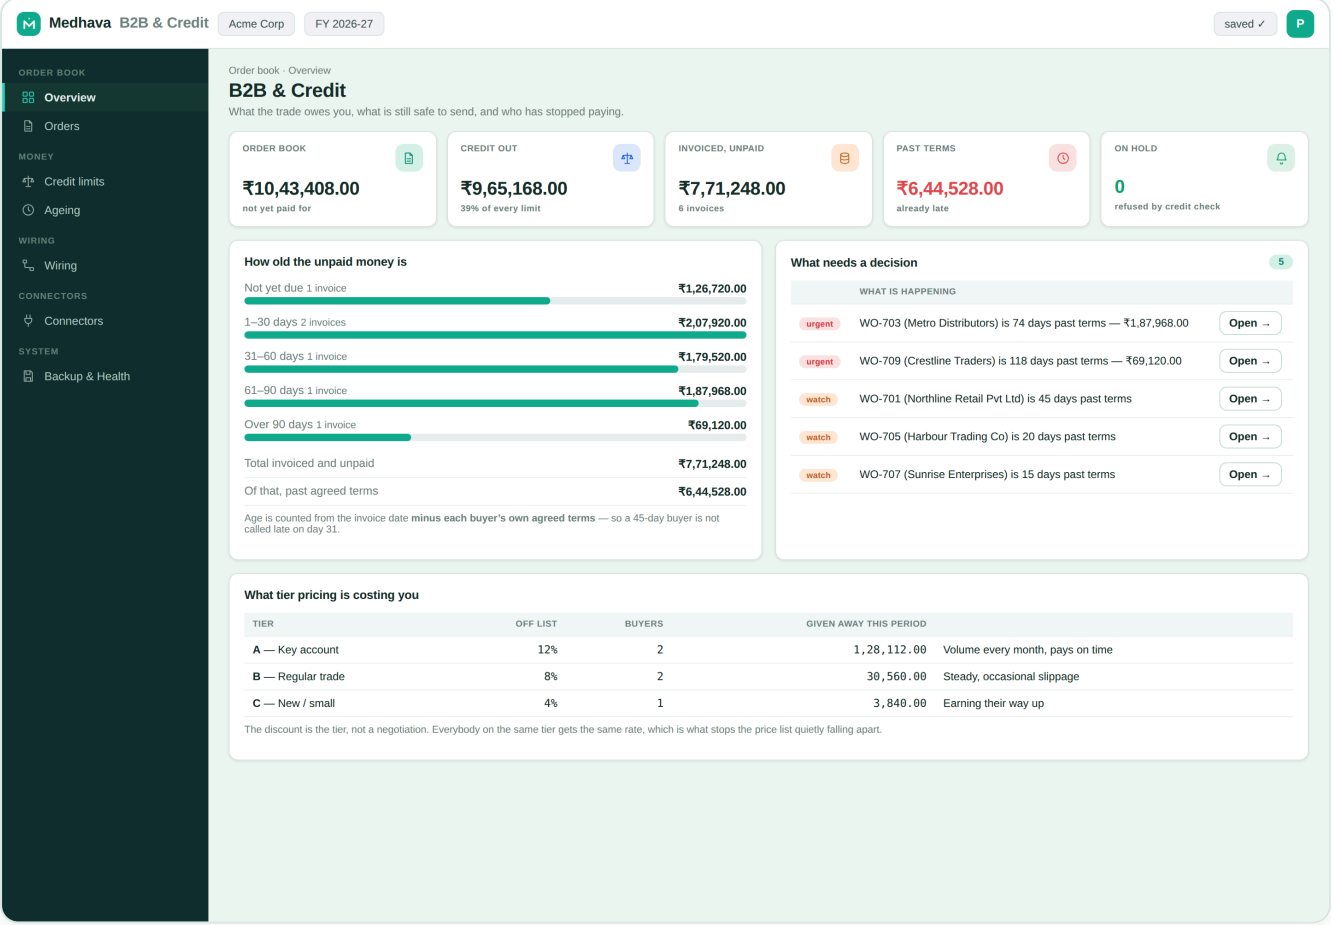

- 1 An order is raised.** Its value comes from the buyer's tier rate — you never type a price.
- 2 The credit check runs.** The order is added to what that buyer already owes. Inside the limit it becomes a draft; outside it, it goes on hold immediately.
- 3 Approved.** The check runs again at this moment, because something may have shipped in between.
- 4 Dispatched.** Stock leaves. From here it is real money at risk, not a plan.
- 5 Invoiced.** It posts to the books and starts ageing — against *their* terms, not a fixed 30 days.
- 6 Paid.** Exposure falls and their headroom for the next order returns.

Why a gate, and not a warning

- ▶ **A warning gets clicked through.** On a busy afternoon, with a buyer on the phone, every warning looks like a formality. A gate does not.
- ▶ **Nothing is lost.** The order goes on hold and waits. Collect something, or raise the limit deliberately, and press **Try again**.
- ▶ **The decision becomes visible.** Raising a limit is a recorded act — you chose to risk more money — instead of an approval nobody remembers giving.
- ▶ **Almost every wholesale bad debt starts with one order approved "just this once".** This is the app refusing to be the place that happens.

The verdict column on the Credit screen looks at both risks. Over limit, 90+ days late, badly late, late, nearly full, room to sell — in that order of seriousness. A buyer is only called "room to sell" when nothing is late *and* there is headroom.

Raise an order at the top; the buyer dropdown shows how much credit each one has left.

List price, tier price and what you gave up sit side by side on every row. The cost of the discount is never invisible — which is the only way the tier system stays honest over a year.

On hold — the credit check refused these

1

ORDER	BUYER	WORTH	WHY	
WO-701	Crestline Traders	34,17,600.00	Would take them ₹33,36,720.00 over the limit	Try again

Collect something, or raise the limit on the Credit screen, then press Try again. Nothing is lost — the order waits.

On hold — ₹34,17,600.00 would exceed Crestline Traders's limit

An order that would break the limit went straight on hold, with the amount it would have exceeded by.

The **On hold** panel only appears when there is something in it, and it says exactly why each order is there. Nothing is hidden and nothing is lost.

BUYER

Northline Retail Pvt Ltd — now ₹9,00,000.00

NEW LIMIT (₹)

500000

Set the limit

Raising a limit is a real decision — it is money you are choosing to risk. The Overview flags anybody who goes over.

Every buyer

BUYER	TIER	TERMS	LIMIT	OWES YOU NOW	LEFT TO USE	WORST INVOICE
Northline Retail Pvt Ltd	A - 12% off	45 days	9,00,000.00	3,06,240.00	5,93,760.00	45d late late — chase before selling more
Metro Distributors	A - 12% off	30 days	7,00,000.00	2,93,568.00	4,06,432.00	74d late badly late — hold dispatches
Harbour Trading Co	B - 8% off	30 days	4,00,000.00	2,13,440.00	1,86,560.00	20d late late — chase before selling more
Sunrise Enterprises	B - 8% off	15 days	3,00,000.00	82,800.00	2,17,200.00	15d late late — chase before selling more
Crestline Traders	C - 4% off	15 days	1,50,000.00	69,120.00	80,880.00	118d late 90+ days late — stop supply

How the check works

1

You raise an order. Its value is worked out from the buyer's tier rate.

2

The app adds it to what that buyer already owes — everything approved and not yet paid.

3

If the total stays inside the limit, the order is approved.

4

If it does not, the order goes on hold. It is not lost, and it is not silently approved either.

5

Collect a payment, or raise the limit on purpose, and press Try again.

Order raised ✓

Where every figure comes from

B2B owns the wholesale order, the tier rate and the credit decision. Everything else it reads.

Shared Data Core: Item/SKU · Party · Stock · Ledger/Voucher · Order — every module reads and writes these.

Every figure here, and its source

FIGURE HERE	COMES FROM	HOW IT IS WORKED OUT
Order value	This app + the price list	Quantity × the buyer's tier rate. The rate is never typed in.
What you gave up	Tier rules	List price minus tier price, so the cost of the discount is visible
Exposure (owes you now)	This app	Every order approved or later, and not yet paid, added up per buyer
Headroom left	This app	The buyer's credit limit minus their exposure
Credit decision	This app	Order value must fit inside the headroom, or the order goes on hold
Invoiced, unpaid	Accounts Receivable	Every invoice raised and not yet settled
Past terms by	This app + buyer master	Days since the invoice, minus that buyer's own agreed terms
Ageing buckets	All of the above	Not yet due · 1–30 · 31–60 · 61–90 · over 90, by days past terms
Stock movement	Inventory	Leaves on dispatch, not on approval
Ledger entry	Accounting	Posted when the invoice is raised, cleared when it is paid

Live example — one wholesale order

1

An order is raised for **Northline Retail Pvt Ltd**. The rate comes from their **tier**, not from whoever typed it.

2

→ The **credit check** runs. Inside the limit it is approved; outside it, it goes on hold.

3

→ **Dispatched**: stock leaves, and their exposure is now real money at risk.

4

→ **Invoiced**: the invoice posts to the books and starts ageing — against **their** terms, not a fixed 30 days.

5

→ **Paid**: exposure falls, and their headroom for the next order returns.

Why the credit check is a gate, not a warning

A warning gets clicked through on a busy afternoon. A gate does not. Over the limit, the order goes **on hold** — it still exists, nothing is lost, but it cannot be dispatched until somebody makes a real decision: collect money, or raise the limit on purpose.

Almost every wholesale bad debt starts with one order approved "just this once".

Northline Retail Pvt Ltd's limit is now ₹11,50,000.00

Every figure, its source, and one wholesale order followed end to end.

Every figure, and how it is worked out

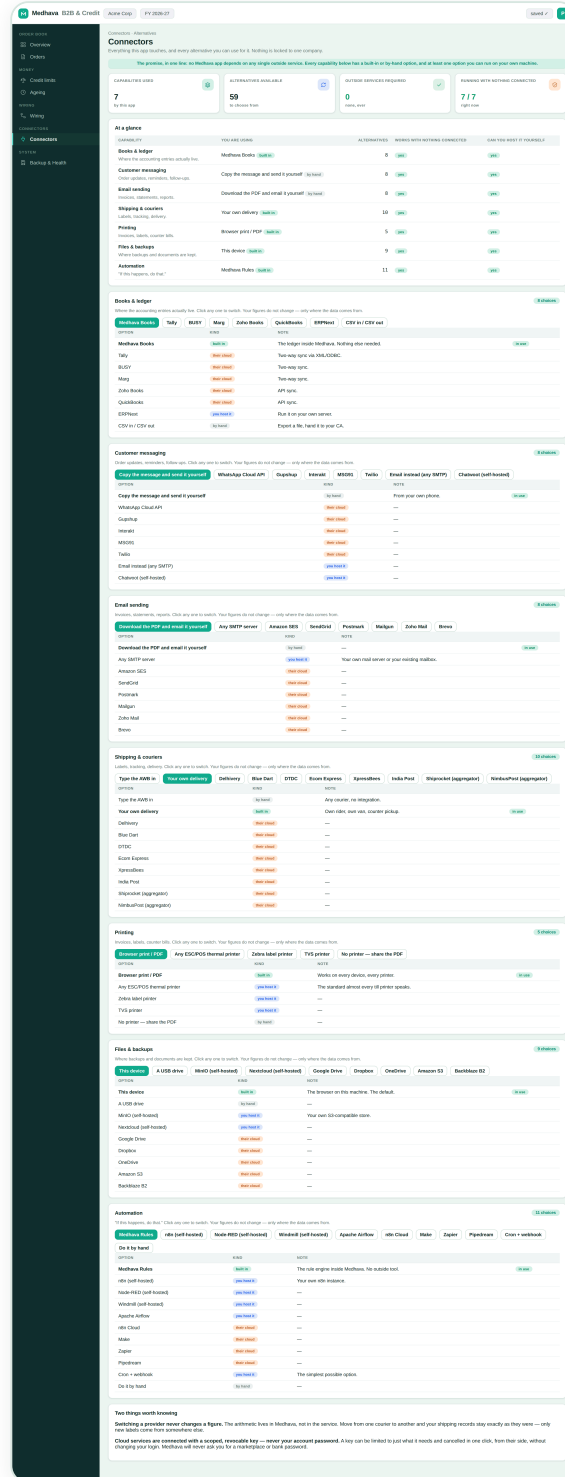

This is the same table as the Wiring screen, so you have it on paper.

FIGURE	COMES FROM	HOW IT IS WORKED OUT
Order value	This app + the price list	Quantity × the buyer's tier rate. The rate is never typed in.
What you gave up	Tier rules	List price minus tier price, so the cost of the discount is visible
Exposure (owes you now)	This app	Every order approved or later, and not yet paid, added up per buyer
Headroom left	This app	The buyer's credit limit minus their exposure
Credit decision	This app	Order value must fit inside the headroom, or the order goes on hold
Invoiced, unpaid	Accounts Receivable	Every invoice raised and not yet settled
Past terms by	This app + buyer master	Days since the invoice, minus that buyer's own agreed terms
Ageing buckets	All of the above	Not yet due · 1–30 · 31–60 · 61–90 · over 90, by days past terms
Stock movement	Inventory	Leaves on dispatch, not on approval
Ledger entry	Accounting	Posted when the invoice is raised, cleared when it is paid

Every figure is rounded to two decimal places at the moment it is calculated, so a total can never disagree with the rows above it by a stray paisa.

Connectors — nothing is locked to one company

This is the promise, and the app checks it on itself every time it opens: **no Medhava app depends on any single outside service.** Not one accounting package, not one marketplace, not one AI company, not one automation tool, not one courier.

"Outside services required: 0" is not a marketing line — it is one of this app's self-tests.

The three rules the app enforces on itself

- 1 **No capability has only one choice.** Every one has at least three; most have eight to twelve.
- 2 **Every capability has a built-in or by-hand option** — so the app is fully usable with **nothing connected at all**. No account anywhere, no internet, no subscription. That is how it ships, and it is the default it starts on.
- 3 **Every capability has an option you can host yourself** — so you are never forced to send your business data to somebody else's cloud, whatever the fashion of the day is.

All three appear as ordinary self-tests on the **Backup & Health** screen, in plain English, alongside the rest — so you can confirm them yourself in five seconds.

Switching a provider never changes a figure. The arithmetic lives in Medhava, not in the service. Move from one courier to another and every past shipping record stays exactly as it was — only new labels come from somewhere else. There is a self-test for exactly this: *"switching a provider changes nothing else in your data"*.

What the four tags on the screen mean

TAG	WHAT IT MEANS FOR YOU
built in	Ships inside Medhava. Needs nothing, costs nothing, works offline.
you host it	You run it on your own machine or server. Your data never leaves your control.
their cloud	Somebody else's service, connected with a scoped, revocable key.
by hand	A person does it, or a CSV goes in and out. Always available.

Why this rule exists at all. Software that can only work with one outside company is not a tool you own — it is a bet on somebody else staying cheap, staying available and staying in business. Every capability here has a way out, including a way that needs nobody.

What this app can be wired to

B2B & Credit uses **7** capabilities and offers **74** alternatives across them. Every one is a button on the Connectors screen — click it and you have switched.

CAPABILITY	THE OPTIONS, IN FULL
Books & ledger	Medhava Books (built in) · Tally · BUSY · Marg · Zoho Books · QuickBooks · ERPNext (self-hosted) · CSV to your CA
Customer messaging	Copy and send it yourself · WhatsApp Cloud API · Gupshup · Interakt · MSG91 · Twilio · email instead · Chatwoot (self-hosted)
Email sending	Download and send it yourself · any SMTP server · Amazon SES · SendGrid · Postmark · Mailgun · Zoho Mail · Brevo
Shipping & couriers	Type the AWB in · your own delivery · Delhivery · Blue Dart · DTDC · Ecom · XpressBees · India Post · Shiprocket · NimbusPost
Printing	Browser print / PDF · any ESC/POS thermal printer · Zebra · TVS · no printer at all
Files & backups	This device · a USB drive · MinIO or Nextcloud (self-hosted) · Google Drive · Dropbox · OneDrive · Amazon S3 · Backblaze B2
Automation	Medhava Rules (built in) · n8n · Node-RED · Windmill · Airflow (self-hosted) · n8n Cloud · Make · Zapier · Pipedream · cron + webhook · by hand

Cloud services use a scoped, revocable key — never your password. A key can be limited to only what it needs and cancelled in one click from the service's own side, without touching your login. **Medhava will never ask you for a marketplace, bank or account password.** If any screen ever does, it is not Medhava.

What if the tool you use is not on the list?

Then it becomes one more button. A provider is a small adapter — read from there, write to there — and the app around it does not change, because the arithmetic never lived in the provider. Adding one does not touch a single figure, a single screen or a single self-test.

WHEN A PROVIDER IS ADDED OR SWAPPED	WHAT HAPPENS
Your existing records	Untouched. Nothing is migrated, because nothing was stored in the provider.
Every figure on every screen	Identical — there is a self-test that proves this.
Your saved work and settings	Untouched.
The self-tests	Same list, same names, still passing.
What you have to relearn	Nothing. The screens do not change.

The practical version of the promise: if a service you use doubles its price, changes its terms, or shuts down, you click a different button. You do not change software, you do not re-enter data, and you do not lose a day.

The 35 self-tests, in full (1 of 2)

These run every time the app opens, **before** anything is shown. Menu → **Backup & Health** to see them live. They are written in plain language on purpose — you should be able to read what was checked.

RESULT	WHAT WAS CHECKED
✓ pass	every tier discount is between 0 and 50%
✓ pass	a tier rate = list price less that tier's discount
✓ pass	an order is valued at the buyer's tier rate, never a typed one
✓ pass	what you gave up = list price – tier price
✓ pass	a tier discount never makes a price negative
✓ pass	every live order sits in a real stage
✓ pass	an order on hold is in no stage
✓ pass	the order book counts everything not yet paid
✓ pass	exposure counts only what is approved and not yet paid
✓ pass	a draft order is not counted against credit yet
✓ pass	headroom = limit – exposure
✓ pass	total exposure is the sum of every buyer's exposure
✓ pass	a paid order stops using up credit
✓ pass	an order that would break the limit is refused, not approved
✓ pass	nobody is over their limit in the seeded data, or it is flagged
✓ pass	only invoiced-and-unpaid money has an age
✓ pass	the ageing buckets add up to everything unpaid
✓ pass	the ageing buckets count every unpaid invoice once

The 35 self-tests, in full (2 of 2)

Continued. The last group are the **Connectors** checks — the ones that keep the no-lock-in promise honest.

RESULT	WHAT WAS CHECKED
✓ pass	age is measured against each buyer's own terms
✓ pass	an invoice inside its terms is never called late
✓ pass	past-terms money is never more than all unpaid money
✓ pass	every buyer appears once on the credit screen
✓ pass	every buyer has a limit and agreed terms
✓ pass	every buyer is on a tier that exists
✓ pass	a buyer with room left but a 90-day-old invoice is still stopped
✓ pass	a buyer is only called "room to sell" if nothing is late and there is headroom
✓ pass	every capability this app uses is a known one
✓ pass	no capability offers only one choice
✓ pass	every capability works with nothing connected (built-in or by hand)
✓ pass	every capability has an option you can host yourself
✓ pass	exactly one provider is active per capability
✓ pass	the default provider never needs an outside service
✓ pass	no single company is unavoidable across capabilities
✓ pass	switching a provider changes which one is active
✓ pass	switching a provider changes nothing else in your data

If you ever see a red "fail", stop trusting the numbers on screen. Take a backup, reload the file, and report which line failed. Software that tells you when it is broken is worth more than software that is quietly wrong.

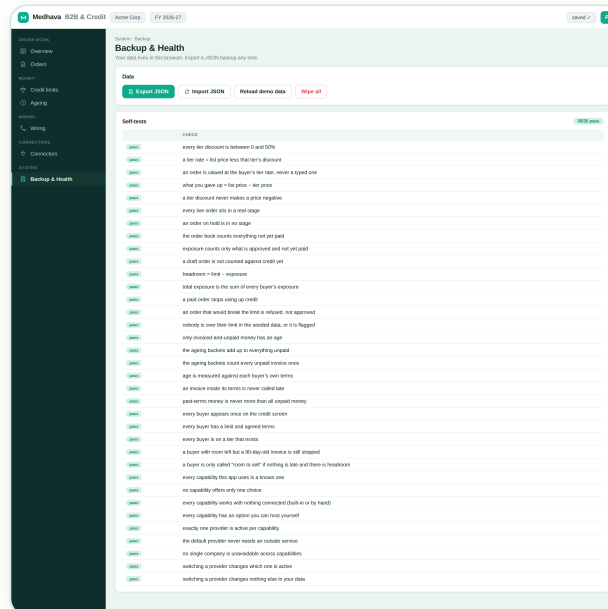

How to run it, and what it will not do

Running it

1. **Windows:** extract the ZIP, then double-click `B2B_Credit.html`. It opens in your browser. That is the whole installation.
2. **Mac:** unpack the ZIP, double-click the file. Safari opens it.
3. **Android:** Files app → Downloads → tap the file → open with Chrome. Then ⋮ → **Add to Home screen**.
4. **iPhone / iPad:** Files app → tap the file → Safari. Then Share → **Add to Home Screen**.
5. No internet needed, ever. No account, no licence key, no setup wizard.

Keeping your data safe

Everything you enter lives in your own browser on your own device — nowhere else, and never on anybody's server. That means nobody can see it, and also that clearing your browser's site data would erase it. So: **Backup & Health** → **Export JSON**, once a week. To move to another device, take the file and the backup with you and use **Import JSON**.

Backup & Health — your data controls, and the live test results below them.

What it will not do

- ▶ It does not decide the limit for you — that is a commercial judgement, and it is recorded as one.
- ▶ It does not chase the money itself; it tells you who to chase and how late they are.
- ▶ It has no credit-bureau lookup. The limit is what you set.
- ▶ In this single-file form nothing is connected live to your books — see the Connectors screen for every option.

Accepted when: the app opens by double-click with no internet · all 35 self-tests show pass · an over-limit order goes on hold rather than being approved · a within-limit order goes through · raising a limit changes the headroom · ageing counts against each buyer's own terms · a backup exports and imports cleanly.
