

VASTRANGAM — ETHNIC-WEAR D2C + MARKETPLACE

Export

Five papers, two tax routes, and the refund everybody forgets

Module 03 · Sales — App 3 of 5

For Vastrangam, export is the highest-margin channel there is — no marketplace commission and almost no returns — and it is a document problem, not a selling problem. This app tracks the five papers every shipment needs — commercial invoice, packing list, shipping bill, bill of lading, certificate of origin — and refuses to mark a shipment shipped until all five are in, because...

One file · opens by double-click

Works offline

34 / 34 self-tests pass

No papers, no sailing

What this is, and what is inside

An export order is a **document problem**, not a selling problem.

Five papers travel with every shipment — commercial invoice, packing list, shipping bill, bill of lading, certificate of origin. Miss one and a container sits at a port earning demurrage while somebody emails a scan. So this app **refuses to mark a shipment shipped until all five are ticked**.

It also handles the two lawful ways to deal with GST on an export: file an **LUT bond** and pay no IGST at all, or **pay it and claim it back**. On the second route the tax is your own working capital sitting with the government.

That refund is the most commonly forgotten receivable in a small export business, because nobody owns the list. Here every unclaimed one is shown with its age.

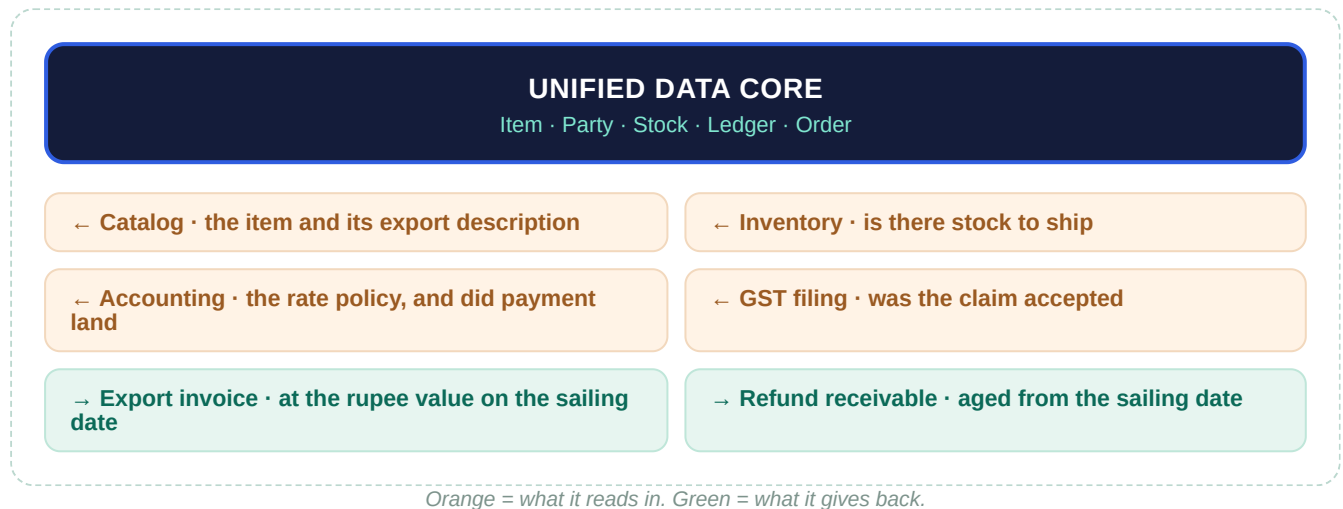

And every rupee figure comes from **one exchange rate held in one place**. Change it and every screen moves together — no screen can be quoting last week's rate.

17. The 34 self-tests, in full (2 of 2)
18. How to run it, and what it will not do

Where Export sits

Every Medhava app stands on **one shared Data Core**: Item/SKU, Party, Stock, Ledger/Voucher and Order.

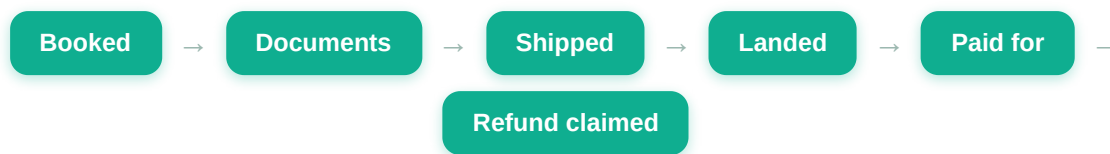

What it reads, and from where

COMES FROM	WHAT IT SUPPLIES
Catalog	The item and its export description
Inventory	Whether there is stock to ship
Accounting	The exchange rate policy and whether payment landed
Accounting & GST	Whether the refund claim was accepted
Logistics	The carrier, the bill of lading and the sailing date

What this app owns: the shipment, its five papers, the tax route and the refund claim. **What it only reads:** the item, the stock, and whether the money arrived.

The process, end to end

The gate is between Documents and Shipped. The refund clock starts at Shipped.

- 1 **A shipment is booked** in the buyer's currency, with a tax route chosen deliberately.
- 2 **The five papers are ticked** as they arrive. The Documents screen says exactly which are still missing.
- 3 **Shipped — but only with all five in.** Press it early and the app names the missing papers and refuses. Stock leaves here, and on the pay-and-claim route the refund clock starts.
- 4 **Landed.** The buyer collects against the bill of lading.
- 5 **Paid for.** The money arrives. The refund, if any, is *still owed* and still listed.
- 6 **Refund received.** Recorded, and it moves from owed to received. Past 60 days it appears on the Overview as something to chase.

Two rules, and why they are worth the whole app

- ▶ **No papers, no sailing.** Every other rule here is bookkeeping; this one is the difference between a container on a ship and a container at a port earning demurrage.
- ▶ **The refund is your money.** On the pay-and-claim route the IGST is working capital you have lent the government. Nobody sends a reminder.
- ▶ **One exchange rate, one place.** Two copies of a rate is two different profit figures, and an argument nobody can settle.
- ▶ **60 days is a health line, not a legal one.** It is the point by which a normal claim has landed — so anything older deserves a phone call rather than a shrug.

Both of the first two are self-tests: *"no shipment sailed with an incomplete set of papers"* and *"every overdue claim really is past 60 days"*.

Open

The two lawful routes, side by side

ROUTE	HOW IT WORKS	SHIPMENTS ON IT	VALUE	CASH EFFECT
LUT bond	File a bond once a year and export without paying IGST at all. No refund to chase.	3	34,29,000.00	no tax paid out
Pay IGST and claim it back	Pay the tax up front, then claim a refund. Cash is out until the refund lands.	3	34,45,200.00	cash out until refunded

If you export more than a few times a year, the LUT bond is almost always the right answer: it is one filing, and it keeps the tax money in your account instead of the government's. The pay-and-claim route only makes sense while the bond is not yet in place.

Now using ₹90 per USD

The rate changed from ₹83.50 to ₹90 — and every rupee figure on every screen moved with it.

There is no second copy of the rate. That is why this works. A business with the rate typed into three spreadsheets has three different profit figures and no way to say which is right.

A shipment cannot move from Documents to Shipped until all 5 papers are ticked. That single rule is what stops a container sitting at the port over a missing certificate.

Cannot sail — still missing Shipping bill, Bill of lading / AWB, Certificate of origin

It stayed at Documents. The app named the papers that were missing.

This is the rule that pays for the app on its first shipment. A container held at a port over a missing certificate of origin costs more in demurrage than the software costs in a year.

Screen - Documents

What each paper is for, then one panel of five buttons per shipment.

Press a button to tick a paper; press again to untick it. A shipment that has already sailed will not let you untick a paper it sailed on — the record of what actually travelled stays intact.

Tax - IGST

IGST & refunds

On the pay-and-claim route the tax is your money, sitting with the government. This screen is how you get it back.

REFUND OWED TO YOU

₹89,679.00

claimed, not received

ALREADY RECEIVED

₹70,140.00

settled claims

PAST 60 DAYS

1

chase these

NEVER PAID AT ALL

₹1,59,067.50

because of the LUT bond

The choice, in plain terms

ROUTE	WHAT HAPPENS	BEST WHEN
LUT bond	File a bond once a year and export without paying IGST at all. No refund to chase.	You export regularly and cash matters. Almost always the right answer.
Pay IGST and claim it back	Pay the tax up front, then claim a refund. Cash is out until the refund lands.	You export rarely, or the bond is not in place yet.

Every pay-and-claim shipment

ORDER	BUYER	FOB ₹	IGST AT 5%	AGE OF CLAIM	
VX-901	Al Fahim Textiles LLC (Dubai)	14,02,800.00	70,140.00	102d	received
VX-902	Saree House London Ltd	11,82,360.00	59,118.00	70d	overdue — chase
VX-905	Bollywood Boutique (Sydney)	6,11,220.00	30,561.00	not shipped	not claimable yet

Why this screen exists at all

On the pay-and-claim route you have already paid this tax. It is not a cost and it is not income — it is your own working capital held somewhere else until you ask for it back. Small exporters lose more money to unclaimed IGST refunds than to almost any other single leak, because nobody owns the list.

A refund is not income and it is not a bonus — it is your own working capital, sitting somewhere else. The 60-day line is not a legal deadline; it is the point at which a healthy claim has usually landed, so anything older deserves a phone call.

Marked shipped

Every pay-and-claim shipment, the age of its claim, and whether it is overdue.

A refund is not income and it is not a bonus. It is your own working capital held somewhere else until you ask for it back. This screen exists because nobody sends a reminder, and small exporters lose more to unclaimed IGST than to almost any other single leak.

Where every figure comes from

Export owns the shipment, its papers and the tax route. Value, stock and the ledger it shares.

Shared Data Core: Item/SKU · Party · Stock · Ledger/Voucher · Order — every module reads and writes these.

Every figure here, and its source

FIGURE HERE	COMES FROM	HOW IT IS WORKED OUT
FOB value in the buyer's currency	This app	Quantity × the agreed rate per unit
FOB value in ₹	This app + one exchange rate	Currency value × the single rate held on the Overview
IGST	This app + the tax route	5% of the rupee value — but only on pay-and-claim shipments
Saved by the LUT bond	This app	5% of everything on the bond route: tax that was never paid out
Papers complete	This app	All five documents ticked. Anything less blocks the shipment from sailing
Refund owed	This app + Accounting & GST	IGST on shipments that have sailed and not yet been refunded
Age of a claim	This app	Days since the shipment date. Past 60 days it is raised on the Overview
Waiting to be paid	Accounts Receivable	Shipments that have sailed and not yet been settled
Stock movement	Inventory	Leaves when the shipment sails, not when it is booked
Ledger entry	Accounting	Export invoice posted at the rupee value on the shipping date

Live example — one container

1

A shipment is booked for **United Arab Emirates** in USD.

2

→ The value in ₹ is the USD amount at **one exchange rate**, held in one place.

3

→ The **five papers** are ticked as they arrive. The app refuses to mark it shipped until all five are in.

4

→ **Shipped**: stock leaves, and if it is on the pay-and-claim route the refund clock starts.

5

→ **Landed**: the buyer collects against the bill of lading.

6

→ **Paid for**: the money arrives; the refund, if any, is still owed and still listed.

The one rule worth the whole app

No papers, no sailing. Every other rule here is bookkeeping; this one is the difference between a container on a ship and a container sitting at a port earning demurrage.

The second most valuable thing on these screens is the refund list. On the pay-and-claim route the tax is **your money** — and it is the single most commonly forgotten receivable in a small export business.

Both are checked by self-tests: a shipment cannot sail incomplete, and every unrefunded claim past 60 days is raised.

Refund of ₹59,118.00 recorded

Every figure, its source, and one container followed from booking to refund.

Every figure, and how it is worked out

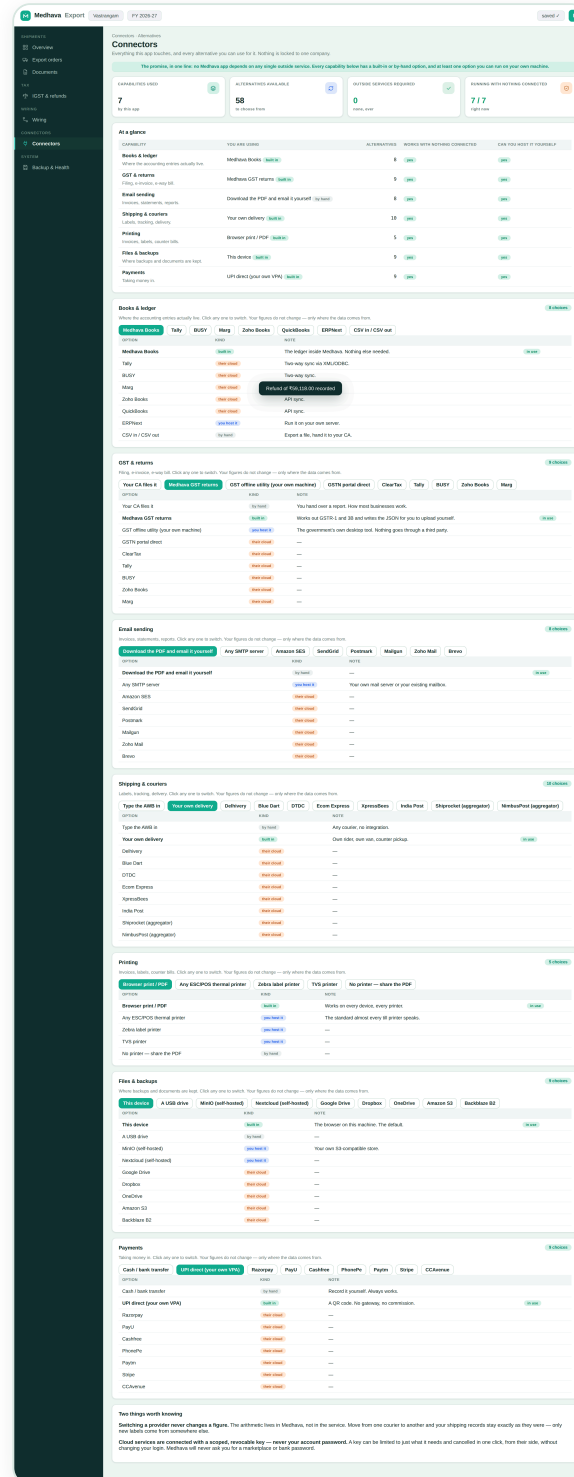

This is the same table as the Wiring screen, so you have it on paper.

FIGURE	COMES FROM	HOW IT IS WORKED OUT
FOB value in the buyer's currency	This app	Quantity × the agreed rate per unit
FOB value in ₹	This app + one exchange rate	Currency value × the single rate held on the Overview
IGST	This app + the tax route	5% of the rupee value — but only on pay-and-claim shipments
Saved by the LUT bond	This app	5% of everything on the bond route: tax that was never paid out
Papers complete	This app	All five documents ticked. Anything less blocks the shipment from sailing
Refund owed	This app + Accounting & GST	IGST on shipments that have sailed and not yet been refunded
Age of a claim	This app	Days since the shipment date. Past 60 days it is raised on the Overview
Waiting to be paid	Accounts Receivable	Shipments that have sailed and not yet been settled
Stock movement	Inventory	Leaves when the shipment sails, not when it is booked
Ledger entry	Accounting	Export invoice posted at the rupee value on the shipping date

Every figure is rounded to two decimal places at the moment it is calculated, so a total can never disagree with the rows above it by a stray paisa.

Connectors — nothing is locked to one company

This is the promise, and the app checks it on itself every time it opens: **no Medhava app depends on any single outside service.** Not one accounting package, not one marketplace, not one AI company, not one automation tool, not one courier.

"Outside services required: 0" is not a marketing line — it is one of this app's self-tests.

The three rules the app enforces on itself

- 1 No capability has only one choice.** Every one has at least three; most have eight to twelve.
- 2 Every capability has a built-in or by-hand option** — so the app is fully usable with **nothing connected at all**. No account anywhere, no internet, no subscription. That is how it ships, and it is the default it starts on.
- 3 Every capability has an option you can host yourself** — so you are never forced to send your business data to somebody else's cloud, whatever the fashion of the day is.

All three appear as ordinary self-tests on the **Backup & Health** screen, in plain English, alongside the rest — so you can confirm them yourself in five seconds.

Switching a provider never changes a figure. The arithmetic lives in Medhava, not in the service. Move from one courier to another and every past shipping record stays exactly as it was — only new labels come from somewhere else. There is a self-test for exactly this: *"switching a provider changes nothing else in your data"*.

What the four tags on the screen mean

TAG	WHAT IT MEANS FOR YOU
built in	Ships inside Medhava. Needs nothing, costs nothing, works offline.
you host it	You run it on your own machine or server. Your data never leaves your control.
their cloud	Somebody else's service, connected with a scoped, revocable key.
by hand	A person does it, or a CSV goes in and out. Always available.

Why this rule exists at all. Software that can only work with one outside company is not a tool you own — it is a bet on somebody else staying cheap, staying available and staying in business. Every capability here has a way out, including a way that needs nobody.

What this app can be wired to

Export uses **7** capabilities and offers **76** alternatives across them. Every one is a button on the Connectors screen — click it and you have switched.

CAPABILITY	THE OPTIONS, IN FULL
Books & ledger	Medhava Books (built in) · Tally · BUSY · Marg · Zoho Books · QuickBooks · ERPNext (self-hosted) · CSV to your CA
GST & returns	Your CA files it · Medhava GST returns (built in) · the government's offline utility on your own machine · GSTN portal · ClearTax · Tally · BUSY · Zoho · Marg
Email sending	Download and send it yourself · any SMTP server · Amazon SES · SendGrid · Postmark · Mailgun · Zoho Mail · Brevo
Shipping & couriers	Type the AWB in · your own delivery · Delhivery · Blue Dart · DTDC · Ecom · XpressBees · India Post · Shiprocket · NimbusPost
Printing	Browser print / PDF · any ESC/POS thermal printer · Zebra · TVS · no printer at all
Files & backups	This device · a USB drive · MinIO or Nextcloud (self-hosted) · Google Drive · Dropbox · OneDrive · Amazon S3 · Backblaze B2
Payments	Cash / bank transfer · UPI direct · Razorpay · PayU · Cashfree · PhonePe · Paytm · Stripe · CCAvenue

Cloud services use a scoped, revocable key — never your password. A key can be limited to only what it needs and cancelled in one click from the service's own side, without touching your login. **Medhava will never ask you for a marketplace, bank or account password.** If any screen ever does, it is not Medhava.

What if the tool you use is not on the list?

Then it becomes one more button. A provider is a small adapter — read from there, write to there — and the app around it does not change, because the arithmetic never lived in the provider. Adding one does not touch a single figure, a single screen or a single self-test.

WHEN A PROVIDER IS ADDED OR SWAPPED	WHAT HAPPENS
Your existing records	Untouched. Nothing is migrated, because nothing was stored in the provider.
Every figure on every screen	Identical — there is a self-test that proves this.
Your saved work and settings	Untouched.
The self-tests	Same list, same names, still passing.
What you have to relearn	Nothing. The screens do not change.

The practical version of the promise: if a service you use doubles its price, changes its terms, or shuts down, you click a different button. You do not change software, you do not re-enter data, and you do not lose a day.

The 34 self-tests, in full (1 of 2)

These run every time the app opens, **before** anything is shown. Menu → **Backup & Health** to see them live. They are written in plain language on purpose — you should be able to read what was checked.

RESULT	WHAT WAS CHECKED
✓ pass	FOB in the buyer's currency = quantity × rate
✓ pass	every rupee value uses the one exchange rate
✓ pass	changing the rate moves every rupee figure together
✓ pass	the total export value is the sum of the shipments
✓ pass	there are exactly five documents per shipment
✓ pass	papers-complete means all five are ticked
✓ pass	the missing list is the papers not ticked
✓ pass	no shipment sailed with an incomplete set of papers
✓ pass	a shipment with a missing paper cannot be marked shipped
✓ pass	there are exactly two lawful routes
✓ pass	every shipment is on one of them
✓ pass	an LUT-bond shipment pays no IGST at all
✓ pass	a pay-and-claim shipment pays IGST at 5% of its rupee value
✓ pass	what the LUT bond saved = 5% of everything on it
✓ pass	a refund is only owed once the goods have shipped
✓ pass	refund owed counts only unrefunded, shipped claims
✓ pass	owed plus received = all the IGST ever paid out

The 34 self-tests, in full (2 of 2)

Continued. The last group are the **Connectors** checks — the ones that keep the no-lock-in promise honest.

RESULT	WHAT WAS CHECKED
✓ pass	recording a refund moves it from owed to received
✓ pass	every overdue claim really is past 60 days
✓ pass	an LUT shipment never appears in the refund list
✓ pass	every shipment sits in a real stage
✓ pass	waiting-to-be-paid counts only shipped and unsettled
✓ pass	a settled shipment is not waiting to be paid
✓ pass	country totals add up to the whole export value
✓ pass	every shipment counts once across the countries
✓ pass	every capability this app uses is a known one
✓ pass	no capability offers only one choice
✓ pass	every capability works with nothing connected (built-in or by hand)
✓ pass	every capability has an option you can host yourself
✓ pass	exactly one provider is active per capability
✓ pass	the default provider never needs an outside service
✓ pass	no single company is unavoidable across capabilities
✓ pass	switching a provider changes which one is active
✓ pass	switching a provider changes nothing else in your data

If you ever see a red "fail", stop trusting the numbers on screen. Take a backup, reload the file, and report which line failed. Software that tells you when it is broken is worth more than software that is quietly wrong.

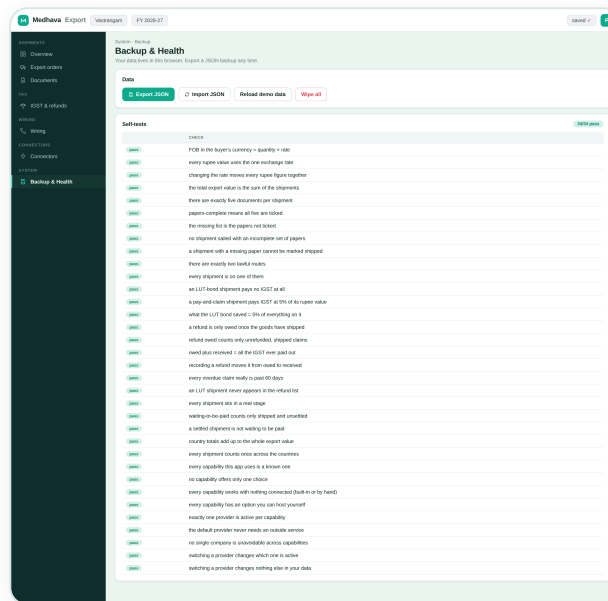

How to run it, and what it will not do

Running it

1. **Windows:** extract the ZIP, then double-click `Export.html`. It opens in your browser. That is the whole installation.
2. **Mac:** unpack the ZIP, double-click the file. Safari opens it.
3. **Android:** Files app → Downloads → tap the file → open with Chrome. Then ⋮ → **Add to Home screen**.
4. **iPhone / iPad:** Files app → tap the file → Safari. Then Share → **Add to Home Screen**.
5. No internet needed, ever. No account, no licence key, no setup wizard.

Keeping your data safe

Everything you enter lives in your own browser on your own device — nowhere else, and never on anybody's server. That means nobody can see it, and also that clearing your browser's site data would erase it. So: **Backup & Health** → **Export JSON**, once a week. To move to another device, take the file and the backup with you and use **Import JSON**.

Backup & Health — your data controls, and the live test results below them.

What it will not do

- ▶ It does not file the shipping bill for you — it tracks whether it exists.
- ▶ It does not fetch live exchange rates; the rate is what you set, on purpose, in one place.
- ▶ It does not lodge the refund claim; it tells you which ones are owed and how old they are.
- ▶ In this single-file form nothing is connected live to GSTN or a carrier — see the Connectors screen.

Accepted when: the app opens by double-click with no internet · all 34 self-tests show pass · a shipment with a missing paper is refused at sailing · ticking the last paper lets it sail · changing the exchange rate moves every rupee figure · an LUT shipment shows no IGST · recording a refund moves it from owed to received · a backup exports and imports cleanly.
