# Run your whole business on one system

Medhava replaces the eleven tools you run today — accounting, stock, marketplace orders, manufacturing, staff and GST — with one application where every number agrees with every other one. Record a goods receipt once, and your stock, your books, your quality record and your supplier score all move in the same instant.

Apps over one data core

1

Stock number for every SKU

7

Marketplaces connected

WHAT MEDHAVA IS

## One application. Not eleven that talk to each other.

Every other suite sells you separate products and a sync job between them. Medhava is a single application over one set of records — so there is nothing to synchronise, and nothing to reconcile.

1

## Enter it once

A goods receipt, a counter sale, a marketplace order — recorded in one place. Stock, the ledger, the quality record and the supplier scorecard all update in the same instant, because they are reading the same record.

2

## Numbers that cannot disagree

One stock figure per SKU. One ledger. One order record. Not a copy per channel that somebody reconciles on Saturday. When the website says four are left, four are left.

3

## Built for how India actually runs

GST with input credit on accepted goods, TDS and TCS, seven marketplaces, piece-rate and output-based wages — and apps that keep working when the internet does not.

WHAT CHANGES FOR YOU

# The same day, before and after

Nothing here is a new way to run your business. It is the work you already do, arranged so that it only has to be done once.

### TODAY

- ✗ Log into seven seller panels, one at a time
- ✗ Copy each order into a sheet, then into the books
- ✗ Guess which stock figure is the real one
- ✗ Learn at month-end that a mill over-billed you
- ✗ Chase a marketplace shortfall you spotted six weeks late
- ✗ Ask three people for their file before you can see one number

### WITH MEDHAVA

- ✓ One queue, sorted by whichever order is closest to being late
- ✓ The order writes itself into stock and into the ledger
- ✓ There is one stock figure, so there is nothing to choose between
- ✓ An over-billed invoice cannot be paid — the match refuses it
- ✓ Every shortfall is on a screen the day the payout lands
- ✓ Open the dashboard. It was already up to date.

## Medhava at a glance

|                  |                                                                                                                                          |
|------------------|------------------------------------------------------------------------------------------------------------------------------------------|
| What it is       | A unified ERP: 15 modules and 63 apps sharing one data core and one event bus.                                                           |
| Shared data core | Item/SKU · Party · Stock · Ledger & Voucher · Order — every module reads and writes these.                                               |
| Key difference   | Not a suite of integrated apps. One application, so there is no sync step and no duplicate master data.                                  |
| Compliance       | Double-entry accounting with CGST/SGST/IGST, TDS, TCS, ITC on accepted goods, GSTR-1 and GSTR-3B.                                        |
| Channels         | Amazon, Flipkart, Myntra, Meesho, Ajio, Nykaa, JioMart, plus Shopify and WooCommerce.                                                    |
| Security         | PostgreSQL row-level security per company; integrations use revocable scoped API keys in an AES-256-GCM vault — never account passwords. |
| Deployment       | Hosted multi-tenant cloud, or single-file offline apps that run by double-clicking with no install.                                      |

## THE PROBLEM

# Your business runs on eleven tools that don't talk

Accounting in one place, stock in a spreadsheet, marketplace orders in seven seller panels, contractor wages in a notebook. Every month-end becomes an archaeology project.

### Numbers that disagree

Stock says 40, the marketplace says 12, the books say something else again. Nobody knows which is right, so everyone guesses.

### Work entered three times

The same invoice keyed into the seller panel, the spreadsheet and the accounting package. Three chances to be wrong.

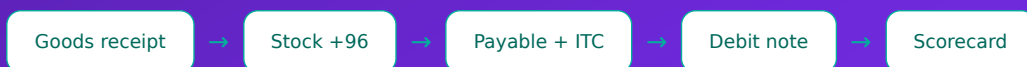

### Money quietly leaking

Over-billed purchases, unclaimed marketplace shortfalls, RTO losses — invisible until the year is over.

## HOW IT WORKS

# One data core. One action cascades everywhere.

Every module reads and writes the same five entities. That is the physical reason a single goods receipt can touch stock, books, quality and sourcing at the same instant.

### UNIFIED DATA CORE

Item / SKU

Party

Stock

Ledger

Order

→ Inventory · stock in

→ Finance · payable & ITC

→ Quality · debit note

→ Sourcing · risk updated

← Planning · requirements

← Marketplace · order pull

### Accepted — not ordered — is what counts

You order 100 metres. 100 arrive. Quality accepts 96. Most systems increase stock by 100 and claim tax credit on 100. Medhava increases stock by **96**, claims input tax credit on **96**, raises a debit note for the 4 rejected, and lowers that supplier's accept rate — automatically.

### Nothing derived is ever stored

Outstanding, risk, performance, ageing, profit per product — all recomputed on read. They cannot drift out of step with the documents underneath them.

## MODULES & APPS

# 15 modules. 63 apps. One login.

Each module is a complete area of your business. Turn on what you need today — everything else is already wired for the day you need it.

- Reconciliation
- Claims & Disputes
- Returns / RMA
- Channels & Storefronts

Marketplace OMS

Every marketplace and every storefront in one order queue — Amazon, Flipkart, Myntra, Meesho, Ajio, Nykaa and JioMart alongside Shopify, WooCommerce, Magento, Wix and your own custom site. Process them all together, channel-wise, or product-wise.

Order Management

One pipeline from new to delivered, whether the order came from a seller panel, your Shopify or WooCommerce site, a dealer or the counter.

Manual Data Check

Upload the sheets you already download — marketplace orders and returns, and your own counter-shop registers, one file or a whole ZIP — and read ten cross-checks back: money, month, item, state, returns, claims, ads, payouts and GST. Every figure is clickable down to the transactions behind it, and the whole result downloads as Excel.

Reconciliation

Match every marketplace payout to the order line that earned it, and expose the gap.

Claims & Disputes

Turn shortfalls, weight disputes and lost parcels into filed claims with evidence.

Returns / RMA

Customer, courier and wrong returns — and the dead stock they actually cost you.

Channels & Storefronts

Connect a channel once and it stays in step: catalogue out, price out, stock out, orders in. Seven marketplaces and any website platform — Shopify, WooCommerce, Magento, BigCommerce, Wix or a custom site over its own API — each switchable without touching your data.

Warehouse

Settlement

MODULE 12

3 APPS

## Get paid what you are

Settlement cycles · what each channel really paid

DUE THIS CYCLE

ACTUALLY PAID

# owed — cycle by cycle

Matching one payout to one order line happens in OMS. This module is the level above it: the settlement cycles each panel runs, the fees it actually charged against the fees it published, and the tax it deducted on your behalf.

READS FROM

E-commerce / OMS

WRITES TO

Accounting & GST

- Payout Cycles
- Fee & Commission Audit
- TCS & TDS Register

Payout Cycles

Every settlement cycle each panel runs — what it should pay, what actually landed in the bank, and on which day — so a late payout is visible the day it is late, not at month end.

TCS & TDS Register

Every rupee the panels deducted as TCS and TDS, matched against the portal's own figures — so the credit you claim is the credit you are actually owed.

Image Studio

Layers, free transform, background removal, channel presets and SEO alt text — a phone photo becomes a channel-compliant product image.

Design Studio

A full design surface — templates, layers, undo and redo, any colour, exact sizing, background images and stock elements — exporting PNG, JPG or PDF at whatever size the channel or the printer asks for.

Projects & Collaboration

MODULE 15

5 APPS

## The work that is not an order — and the talking around it

Not every business runs on orders. A law firm runs on cases, an agency on engagements, a workshop on jobs, a builder on sites. This module holds that work on the same records as everything else, so the time, the cost, the documents and the decisions attached to it end up in the books rather than in somebody's inbox.

Projects & Cases

A project, a case file, an engagement or a job — whatever your work is called. Stages you define, owners, deadlines, documents, billable time and real cost, all on one record the ledger can see.

Approvals

One queue for everything waiting on a yes — a purchase order, a discount, a leave day, a credit note, a payment. The rule that sent it there is on the screen next to it, and the decision goes to the audit record.

Live matters · a practice, not a production line

100%

### Ask & Print

Ask from your phone, anywhere: a ledger, a bill, today's packing slips. It comes back as a PDF — or prints on the office printer, with nothing plugged into your phone.

BUILT DEEP, NOT WIDE

## The controls that pay for the software

### Three-way match

A supplier bill only passes when the purchase order, the goods receipt and the invoice agree on price and quantity. Bills that over-charge or over-bill rejected goods are held automatically, with the reason in plain language.

### Vendor risk that sees ahead

Risk blends weak performance, spend concentration and overdue bills. Your *best* supplier still flags medium risk when 44% of your buying sits with them — the fact worth knowing before a disruption, not after.

### Settlement reconciliation

Import a marketplace settlement, match it to the orders, and see every commission, TCS deduction, weight discrepancy and short payment — with a claim pack ready to file.

### Piece-rate and contractor pay

Pooled completion, per-unit rates, rework hours and advances roll into one payout for anyone paid by output rather than by the hour — and into a true cost per unit for every product.

### One stock number

One quantity per SKU per location per stage, pushed to every channel. Overselling stops being a monthly apology.

### AI studio built in

Listings, ad copy, product photography and reels generated against your own catalogue — not a bolted-on chatbot, but the same data core.

INDUSTRIES

# One engine, any industry

Every app ships in two builds: a neutral unified-ERP configuration, and an industry configuration. The engine, formulas and tests are identical — only the master data differs.

### Textile & apparel

Mills and trim suppliers, fabric in metres and pieces in numbers on one item master, piece-rate pay, design-wise costing, HSN 5007/5208, marketplace returns and wrong-return dead stock.

### Medical & pharma

Distributors, batch and expiry tracking, QC pass rate as accept rate, cold-chain locations, and a regulated document trail nobody can quietly edit.

### Manufacturing

Component suppliers, multi-level BOM, fill rate driving line stoppages, work orders, scrap and rework accounted where they happen.

### Services

Subcontractors, milestone acceptance in place of goods receipt, timesheets, retainer billing and project profitability.

### Drone & precision

Serial and lot tracking to the individual unit, calibration as a production stage you define, and certification paperwork filed against the batch it belongs to.

### Law firms

A matter instead of an order: hearings, filings, opposing parties and e-signed engagement letters on one record. Time against the matter becomes the bill.

### Chartered accountants

Clients, engagements and statutory deadlines in one calendar; staff hours costed per engagement; the practice's own books kept in the same system.

### Trading & export

Multi-warehouse stock with one number, credit limits and ageing per buyer, commercial invoice, LUT bond and IGST refund — plus every channel in one queue.

COMPARISON

# Medhava vs. a suite of integrated apps

The difference is architectural, not cosmetic.

| CAPABILITY   | MEDHAVA                    | TYPICAL SUITE              |
|--------------|----------------------------|----------------------------|
| Architecture | One app, one data core     | Many apps, integrated      |
| Master data  | Single Item & Party record | Duplicated per app, synced |
|              |                            |                            |

| CAPABILITY               | MEDHAVA                               | TYPICAL SUITE               |
|--------------------------|---------------------------------------|-----------------------------|
| Stock truth              | One number per SKU × location         | Per-app, reconciled nightly |
| Cross-module posting     | Instant, via event bus                | Scheduled sync jobs         |
| Marketplace settlement   | Reconciled to order line + claim pack | Usually a separate tool     |
| Piece-rate manufacturing | Built in                              | Custom development          |
| AI content & imaging     | Native, on your catalogue             | Third-party add-on          |
| Offline capability       | Single-file apps run offline          | Cloud-only                  |

TRUST & SECURITY

Your credentials  
are never the key

Scoped keys only

Marketplace, bank and courier connections use revocable, scoped API keys held in an AES-256-GCM vault. Medhava never asks for, uses or stores an account password.

Isolation by row

Every record carries a company id and is enforced by PostgreSQL row-level security. Group companies stay separate but consolidate on demand.

Immutable audit

Every posting, price change and permission grant is written to an append-only trail with actor, timestamp and before/after values.

THE GAP

Three categories of software.  
Nobody sells all three.

You are not short of tools. You are short of one tool that covers all of it — which is why the numbers never agree.

Accounting & ERP suites

Tally · BUSY · Marg · Zoho · Odoo

- ✓ Books, GST, stock, purchase
- ✓ Manufacturing, payroll
- ✗ No marketplace order queue
- ✗ No settlement reconciliation or claims
- ✗ No content, image or video studio

Marketplace OMS platforms

Unicommerce · EliteSecom · SmartHub

- ✓ Panel orders in one queue
- ✓ Inventory sync, settlement
- ✗ No double-entry books, no GST return
- ✗ No manufacturing, purchase or payroll
- ✗ No content, image or video studio

AI content tools

Writing · image · video generators

- ✓ Copy, pictures, reels
- ✗ Knows nothing about your catalogue
- ✗ No orders, no stock, no books
- ✗ Nothing publishes to a channel
- ✗ Nothing reconciles afterwards

Medhava

All three, over one data core

- ✓ Books, GST, stock, purchase, manufacturing, payroll
- ✓ Marketplace and storefront order queue
- ✓ Settlement, claims, returns, packing footage
- ✓ Content, image, design and video studio

In an accounting package you will never get a marketplace OMS. In an OMS you will never get your books. In a content tool you will never get either. That is the gap. Medhava is built in it.

#### THE APPROACH

## Built deep, not wide

A long feature list is easy. What is hard is the one control that stops the money leaking — so every module ships with one, and refuses rather than warns.

01

### Accepted, not ordered

You order 100. 100 arrive. Quality accepts 96. Most systems raise stock by 100 and claim tax credit on 100. Medhava raises stock by 96, claims credit on 96, raises a debit note for the 4, and lowers that supplier's accept rate. Automatically.

02

### The payout, to the order line

Not "the channel paid ₹49.1 lakh". Which order line was short, by how much, against which published commission rate — with the claim pack already assembled and the packing footage attached.

03

### Nothing derived is stored

Outstanding, ageing, promise dates, payouts, on-time percentage and risk are recomputed every time you read them. A stored number goes stale the moment the document under it changes. These cannot.

#### PRICING

## Start free. Pay when it runs your business.

Per company. Two of the 15 modules — E-commerce / OMS and the AI Content Engine — are priced on what you actually use, because an order is work and a piece of content is work.

[Talk to sales](#)

## E-commerce / OMS & AI Content Engine

These two are metered, the way every serious order-management platform prices. You pay for orders that actually shipped and content that was actually produced — not for a seat that sat idle.

### E-commerce / OMS PER ORDER PROCESSED

| ORDERS A MONTH  | PER ORDER  | INCLUDED                          |
|-----------------|------------|-----------------------------------|
| Up to 1,000     | ₹2.50      | All channels, settlement, returns |
| 1,001 - 10,000  | ₹1.80      | + claims desk, packing footage    |
| 10,001 - 50,000 | ₹1.40      | + multi-warehouse routing         |
| Above 50,000    | On request | + dedicated throughput            |

An order is counted once, when it is dispatched. A cancelled or unshipped order is never billed.

### AI Content Engine PER PIECE PRODUCED

| WHAT IS PRODUCED                              | COUNTS AS | RATE |
|-----------------------------------------------|-----------|------|
| Channel listing (title, bullets, description) | 1 content | ₹6   |
| Social post, caption or ad variation          | 1 content | ₹4   |
| Product image · background, resize, preset    | 1 content | ₹3   |
| Reel or video cut, per finished clip          | 1 content | ₹25  |

Bring your own model key and the rate drops to the platform fee alone — no lock-in, ever.

#### QUESTIONS

## Frequently asked

What is Medhava?

Medhava is a unified ERP made of 15 modules and 63 apps that all read and write one shared data core — Item/SKU, Party, Stock, Ledger and Order. Because the data is shared, a single action such as a goods receipt updates stock, the ledger, quality records and the vendor scorecard at the same time.

How is Medhava different from Zoho or Odoo?

Does Medhava support Indian GST?

Which marketplaces does Medhava connect to?

Can Medhava be used outside textiles?

Is my data safe?

Can I use it without internet?

How long does implementation take?

## Stop reconciling. Start running.

See your own numbers inside Medhava. Bring one month of sales, purchases and stock — we will show you what your current tools are hiding.

WHAT MEDHAVA IS

## One application. Not eleven that talk to each other.

Every other suite sells you separate products and a sync job between them. Medhava is a single application over one set of records — so there is nothing to synchronise, and nothing to reconcile.

1

### Enter it once

A goods receipt, a counter sale, a marketplace order — recorded in one place. Stock, the ledger, the quality record and the supplier scorecard all update in the same instant, because they are reading the same record.

2

### Numbers that cannot disagree

One stock figure per SKU. One ledger. One order record. Not a copy per channel that somebody reconciles on Saturday. When the website says four are left, four are left.

3

### Built for how India actually runs

GST with input credit on accepted goods, TDS and TCS, seven marketplaces, piece-rate and output-based wages — and apps that keep working when the internet does not.

WHAT CHANGES FOR YOU

## The same day, before and after

Nothing here is a new way to run your business. It is the work you already do, arranged so that it only has to be done once.

#### TODAY

- ✗ Log into seven seller panels, one at a time
- ✗ Copy each order into a sheet, then into the books
- ✗ Guess which stock figure is the real one
- ✗ Learn at month-end that a mill over-billed you
- ✗ Chase a marketplace shortfall you spotted six weeks late
- ✗ Ask three people for their file before you can see one number

#### WITH MEDHAVA

- ✓ One queue, sorted by whichever order is closest to being late
- ✓ The order writes itself into stock and into the ledger
- ✓ There is one stock figure, so there is nothing to choose between
- ✓ An over-billed invoice cannot be paid — the match refuses it
- ✓ Every shortfall is on a screen the day the payout lands
- ✓ Open the dashboard. It was already up to date.

#### Medhava at a glance

|                  |                                                                                                                                          |
|------------------|------------------------------------------------------------------------------------------------------------------------------------------|
| What it is       | A unified ERP: 15 modules and 63 apps sharing one data core and one event bus.                                                           |
| Shared data core | Item/SKU · Party · Stock · Ledger & Voucher · Order — every module reads and writes these.                                               |
| Key difference   | Not a suite of integrated apps. One application, so there is no sync step and no duplicate master data.                                  |
| Compliance       | Double-entry accounting with CGST/SGST/IGST, TDS, TCS, ITC on accepted goods, GSTR-1 and GSTR-3B.                                        |
| Channels         | Amazon, Flipkart, Myntra, Meesho, Ajio, Nykaa, JioMart, plus Shopify and WooCommerce.                                                    |
| Security         | PostgreSQL row-level security per company; integrations use revocable scoped API keys in an AES-256-GCM vault — never account passwords. |
| Deployment       | Hosted multi-tenant cloud, or single-file offline apps that run by double-clicking with no install.                                      |

# Your business runs on eleven tools that don't talk

Accounting in one place, stock in a spreadsheet, marketplace orders in seven seller panels, contractor wages in a notebook. Every month-end becomes an archaeology project.

## Numbers that disagree

Stock says 40, the marketplace says 12, the books say something else again. Nobody knows which is right, so everyone guesses.

## Work entered three times

The same invoice keyed into the seller panel, the spreadsheet and the accounting package. Three chances to be wrong.

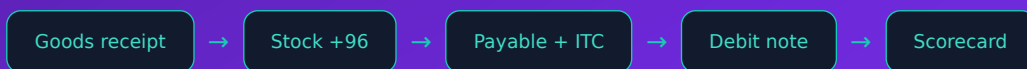

## Money quietly leaking

Over-billed purchases, unclaimed marketplace shortfalls, RTO losses — invisible until the year is over.

## HOW IT WORKS

# One data core. One action cascades everywhere.

Every module reads and writes the same five entities. That is the physical reason a single goods receipt can touch stock, books, quality and sourcing at the same instant.

## UNIFIED DATA CORE

Item / SKU

Party

Stock

Ledger

Order

→ Inventory · stock in

→ Finance · payable &amp; ITC

→ Quality · debit note

→ Sourcing · risk updated

← Planning · requirements

← Marketplace · order pull

## Accepted — not ordered — is what counts

You order 100 metres. 100 arrive. Quality accepts 96. Most systems increase stock by 100 and claim tax credit on 100. Medhava increases stock by **96**, claims input tax credit on **96**, raises a debit note for the 4 rejected, and lowers that supplier's accept rate — automatically.

## Nothing derived is ever stored

Outstanding, risk, performance, ageing, profit per product — all recomputed on read. They cannot drift out of step with the documents underneath them.

# 15 modules. 63 apps. One login.

Each module is a complete area of your business. Turn on what you need today — everything else is already wired for the day you need it.

- Marketplace OMS
- Order Management
- Manual Data Check
- Reconciliation
- Claims & Disputes
- Returns / RMA

- Channels & Storefronts

Marketplace OMS

Every marketplace and every storefront in one order queue — Amazon, Flipkart, Myntra, Meesho, Ajio, Nykaa and JioMart alongside Shopify, WooCommerce, Magento, Wix and your own custom site. Process them all together, channel-wise, or product-wise.

Order Management

One pipeline from new to delivered, whether the order came from a seller panel, your Shopify or WooCommerce site, a dealer or the counter.

Manual Data Check

Upload the sheets you already download — marketplace orders and returns, and your own counter-shop registers, one file or a whole ZIP — and read ten cross-checks back: money, month, item, state, returns, claims, ads, payouts and GST. Every figure is clickable down to the transactions behind it, and the whole result downloads as Excel.

Reconciliation

Match every marketplace payout to the order line that earned it, and expose the gap.

Claims & Disputes

Turn shortfalls, weight disputes and lost parcels into filed claims with evidence.

Returns / RMA

Customer, courier and wrong returns — and the dead stock they actually cost you.

Channels & Storefronts

Connect a channel once and it stays in step: catalogue out, price out, stock out, orders in. Seven marketplaces and any website platform — Shopify, WooCommerce, Magento, BigCommerce, Wix or a custom site over its own API — each switchable without touching your data.

Warehouse

MODULE 05

3 APPS

# Pick right the first time — and prove what you sent

Bin-level instructions and barcode scanning, so the right item leaves the building and stock stays honest — and a recording of each parcel being packed, so an argument about what was in it is settled by footage instead of by memory.

- Packing Video

Picking & Bins

Pick lists that tell staff exactly which bin to walk to, in walking order.

Barcode Operations

Scan to pick, pack, dispatch and run a physical stock count from a phone — the same scan whether the order came from a marketplace, your Shopify site or the counter.

Packing Video

Every parcel recorded as it is packed and indexed by its order number, so a wrong-item claim is answered with the clip. The footage attaches itself to the claim that needs it.

# The courier network itself — rates, failures and the COD money

Booking one parcel happens on the order, in Sales. This module is the network behind it: what every courier charges before you pick one, what happens to a delivery that fails, and whether the cash collected at the door actually reached your bank.

PLM & Development

First idea to something you can actually make: specification, sample rounds, costed trials and sign-off, with every version kept. A product, a machined part, a formulation or a service package all move through stages you set yourself.

Production Orders

Your own stages from first operation to finished goods, with work-in-progress visible at each one.

Piece-rate & Contractors

Output-based pay for anyone paid by the piece rather than the hour — pooled completion, per-unit rates, rework and advances resolved into a single payout.

BOM & Consumption

What each product consumes, costed at today’s material rates.

Quality Control

Accept, reject or rework — with reasons that feed the supplier scorecard.

Maintenance

Machines, tools and assets: what is due for service, when it was last done, what it cost, and what stopped while it was down. Planned and breakdown work against the same asset record.

Settlement cycles · what each channel really paid

DUE THIS CYCLE

ACTUALLY PAID

# owed — cycle by cycle

Matching one payout to one order line happens in OMS. This module is the level above it: the settlement cycles each panel runs, the fees it actually charged against the fees it published, and the tax it deducted on your behalf.

READS FROM

E-commerce / OMS

WRITES TO

Accounting & GST

- Payout Cycles
- Fee & Commission Audit
- TCS & TDS Register

Payout Cycles

Every settlement cycle each panel runs — what it should pay, what actually landed in the bank, and on which day — so a late payout is visible the day it is late, not at month end.

TCS & TDS Register

Every rupee the panels deducted as TCS and TDS, matched against the portal's own figures — so the credit you claim is the credit you are actually owed.

Social Calendar

Plan and publish across every channel from one calendar.

Repricing Engine

Rules per channel and SKU — floor, ceiling, match-lowest, festival overrides.

Blog & Pages

Articles, landing pages and category copy written, scheduled and published straight to your own site — Shopify, WooCommerce, Magento or a custom CMS — with the meta title, description and internal links set before it goes out.

Campaigns

Email, SMS and WhatsApp campaigns measured on real revenue, not opens.

Automation

If this happens, do that — across any module, without writing code.

AI Content Engine

MODULE 14

5 APPS

# Write it, shoot it, cut it — from the catalogue you already have

Listings, ads, email, product photography and reels, all generated from your own catalogue — so the words match the product and the picture is the right size for the channel it is going to. Words, images and video sit in one module because they are one job.

- Publisher

Content Engine

Fourteen stages in your own voice, from buyer research and competitor reading through hooks, channel-ready listings, ads, social posts, video scripts, song lyrics, the publishing calendar and alt text — each written from your own catalogue, so the words match the thing.

Image Studio

Layers, free transform, background removal, channel presets and SEO alt text — a phone photo becomes a channel-compliant product image.

Video Studio

Text and image to video, reels and ad cuts sized for every channel.

Design Studio

A full design surface — templates, layers, undo and redo, any colour, exact sizing, background images and stock elements — exporting PNG, JPG or PDF at whatever size the channel or the printer asks for.

Publisher

One push sends the finished listing, picture and copy everywhere it has to appear — your storefront, each marketplace, each social account — and reports back what actually went live and what was rejected, with the reason.

Projects & Collaboration

MODULE 15

5 APPS

## The work that is not an order — and the talking around it

Not every business runs on orders. A law firm runs on cases, an agency on engagements, a workshop on jobs, a builder on sites. This module holds that work on the same records as everything else, so the time, the cost, the documents and the decisions attached to it end up in the books rather than in somebody's inbox.

Projects & Cases

A project, a case file, an engagement or a job — whatever your work is called. Stages you define, owners, deadlines, documents, billable time and real cost, all on one record the ledger can see.

Timesheets & Planning

Who is on what this week, and the hours that actually went in — against a project, a case, a job or a machine. Billable and non-billable separated, so a rate card turns straight into an invoice and a real cost.

Approvals

One queue for everything waiting on a yes — a purchase order, a discount, a leave day, a credit note, a payment. The rule that sent it there is on the screen next to it, and the decision goes to the audit record.

Forum

Questions and answers that outlive a chat — for customers, dealers or staff — with the useful ones kept where the next person will actually find them.

### Discuss

Conversation attached to the record it is about: this order, this bill, this case. A year later the reason for a decision is still sitting next to the decision.

### Platform

THE SPINE UNDER ALL 15

2 APPS

## The spine every module runs on

Not a module you open — the layer underneath all 15. Who can see what, how the system is configured, and a record of everything that ever happened.

100%

BUILT DEEP, NOT WIDE

## The controls that pay for the software

### Three-way match

A supplier bill only passes when the purchase order, the goods receipt and the invoice agree on price and quantity. Bills that over-charge or over-bill rejected goods are held automatically, with the reason in plain language.

### Vendor risk that sees ahead

Risk blends weak performance, spend concentration and overdue bills. Your *best* supplier still flags medium risk when 44% of your buying sits with them — the fact worth knowing before a disruption, not after.

### Settlement reconciliation

Import a marketplace settlement, match it to the orders, and see every commission, TCS deduction, weight discrepancy and short payment — with a claim pack ready to file.

### Piece-rate and contractor pay

Pooled completion, per-unit rates, rework hours and advances roll into one payout for anyone paid by output rather than by the hour — and into a true cost per unit for every product.

### One stock number

One quantity per SKU per location per stage, pushed to every channel. Overselling stops being a monthly apology.

### AI studio built in

Listings, ad copy, product photography and reels generated against your own catalogue — not a bolted-on chatbot, but the same data core.

INDUSTRIES

# One engine, any industry

Every app ships in two builds: a neutral unified-ERP configuration, and an industry configuration. The engine, formulas and tests are identical — only the master data differs.

### Textile & apparel

Mills and trim suppliers, fabric in metres and pieces in numbers on one item master, piece-rate pay, design-wise costing, HSN 5007/5208, marketplace returns and wrong-return dead stock.

### Medical & pharma

Distributors, batch and expiry tracking, QC pass rate as accept rate, cold-chain locations, and a regulated document trail nobody can quietly edit.

### Manufacturing

Component suppliers, multi-level BOM, fill rate driving line stoppages, work orders, scrap and rework accounted where they happen.

### Services

Subcontractors, milestone acceptance in place of goods receipt, timesheets, retainer billing and project profitability.

### Drone & precision

Serial and lot tracking to the individual unit, calibration as a production stage you define, and certification paperwork filed against the batch it belongs to.

### Law firms

A matter instead of an order: hearings, filings, opposing parties and e-signed engagement letters on one record. Time against the matter becomes the bill.

### Chartered accountants

Clients, engagements and statutory deadlines in one calendar; staff hours costed per engagement; the practice's own books kept in the same system.

### Trading & export

Multi-warehouse stock with one number, credit limits and ageing per buyer, commercial invoice, LUT bond and IGST refund — plus every channel in one queue.

COMPARISON

# Medhava vs. a suite of integrated apps

The difference is architectural, not cosmetic.

| CAPABILITY   | MEDHAVA                    | TYPICAL SUITE              |
|--------------|----------------------------|----------------------------|
| Architecture | One app, one data core     | Many apps, integrated      |
| Master data  | Single Item & Party record | Duplicated per app, synced |

| CAPABILITY               | MEDHAVA                               | TYPICAL SUITE               |
|--------------------------|---------------------------------------|-----------------------------|
| Stock truth              | One number per SKU × location         | Per-app, reconciled nightly |
| Cross-module posting     | Instant, via event bus                | Scheduled sync jobs         |
| Marketplace settlement   | Reconciled to order line + claim pack | Usually a separate tool     |
| Piece-rate manufacturing | Built in                              | Custom development          |
| AI content & imaging     | Native, on your catalogue             | Third-party add-on          |
| Offline capability       | Single-file apps run offline          | Cloud-only                  |

### Scoped keys only

Marketplace, bank and courier connections use revocable, scoped API keys held in an AES-256-GCM vault. Medhava never asks for, uses or stores an account password.

### Isolation by row

Every record carries a company id and is enforced by PostgreSQL row-level security. Group companies stay separate but consolidate on demand.

### Immutable audit

Every posting, price change and permission grant is written to an append-only trail with actor, timestamp and before/after values.

THE GAP

# Three categories of software. Nobody sells all three.

You are not short of tools. You are short of one tool that covers all of it — which is why the numbers never agree.

Accounting & ERP suites

Tally · BUSY · Marg · Zoho · Odoo

✓ Books, GST, stock, purchase

✓ Manufacturing, payroll

✗ No marketplace order queue

✗ No settlement reconciliation or claims

✗ No content, image or video studio

Marketplace OMS platforms

Unicommerce · EliteSecom · SmartHub

✓ Panel orders in one queue

✓ Inventory sync, settlement

✗ No double-entry books, no GST return

✗ No manufacturing, purchase or payroll

✗ No content, image or video studio

AI content tools

Writing · image · video generators

✓ Copy, pictures, reels

✗ Knows nothing about your catalogue

✗ No orders, no stock, no books

✗ Nothing publishes to a channel

✗ Nothing reconciles afterwards

Medhava

All three, over one data core

✓ Books, GST, stock, purchase, manufacturing, payroll

✓ Marketplace and storefront order queue

✓ Settlement, claims, returns, packing footage

✓ Content, image, design and video studio

In an accounting package you will never get a marketplace OMS. In an OMS you will never get your books. In a content tool you will never get either. That is the gap. Medhava is built in it.

#### THE APPROACH

## Built deep, not wide

A long feature list is easy. What is hard is the one control that stops the money leaking — so every module ships with one, and refuses rather than warns.

01

### Accepted, not ordered

You order 100. 100 arrive. Quality accepts 96. Most systems raise stock by 100 and claim tax credit on 100. Medhava raises stock by 96, claims credit on 96, raises a debit note for the 4, and lowers that supplier's accept rate. Automatically.

02

### The payout, to the order line

Not "the channel paid ₹49.1 lakh". Which order line was short, by how much, against which published commission rate — with the claim pack already assembled and the packing footage attached.

03

### Nothing derived is stored

Outstanding, ageing, promise dates, payouts, on-time percentage and risk are recomputed every time you read them. A stored number goes stale the moment the document under it changes. These cannot.

#### PRICING

## Start free. Pay when it runs your business.

Per company. Two of the 15 modules — E-commerce / OMS and the AI Content Engine — are priced on what you actually use, because an order is work and a piece of content is work.

Talk to sales

E-commerce / OMS & AI Content Engine

These two are metered, the way every serious order-management platform prices. You pay for orders that actually shipped and content that was actually produced — not for a seat that sat idle.

E-commerce / OMS

PER ORDER PROCESSED

| ORDERS A MONTH  | PER ORDER  | INCLUDED                          |
|-----------------|------------|-----------------------------------|
| Up to 1,000     | ₹2.50      | All channels, settlement, returns |
| 1,001 – 10,000  | ₹1.80      | + claims desk, packing footage    |
| 10,001 – 50,000 | ₹1.40      | + multi-warehouse routing         |
| Above 50,000    | On request | + dedicated throughput            |

An order is counted once, when it is dispatched. A cancelled or unshipped order is never billed.

AI Content Engine

PER PIECE PRODUCED

| WHAT IS PRODUCED                              | COUNTS AS | RATE |
|-----------------------------------------------|-----------|------|
| Channel listing (title, bullets, description) | 1 content | ₹6   |
| Social post, caption or ad variation          | 1 content | ₹4   |
| Product image · background, resize, preset    | 1 content | ₹3   |
| Reel or video cut, per finished clip          | 1 content | ₹25  |

Bring your own model key and the rate drops to the platform fee alone — no lock-in, ever.

## QUESTIONS

# Frequently asked

What is Medhava?

Medhava is a unified ERP made of 15 modules and 63 apps that all read and write one shared data core — Item/SKU, Party, Stock, Ledger and Order. Because the data is shared, a single action such as a goods receipt updates stock, the ledger, quality records and the vendor scorecard at the same time.

How is Medhava different from Zoho or Odoo?

Does Medhava support Indian GST?

Which marketplaces does Medhava connect to?

Can Medhava be used outside textiles?

Is my data safe?

Can I use it without internet?

How long does implementation take?

## Stop reconciling. Start running.

See your own numbers inside Medhava. Bring one month of sales, purchases and stock — we will show you what your current tools are hiding.
