

UNIFIED ERP — ANY INDUSTRY

# CEO Dashboard

Did we make money · Is the cash safe · What needs me today

Module 01 · Dashboard & BI — App 1 of 4

One screen that answers: did we make money, is cash safe, and what needs me today.

- One file · opens by double-click
- Works offline
- Reads everything, writes nothing
- 30 / 30 self-tests pass

# What this is, and what is inside

The CEO Dashboard is the **one screen you look at each morning**. It answers three questions and nothing else: did we make money, is the cash safe, and what needs a decision today.

The whole business on one screen — every company in it, or one at a time. Sales after returns, real profit, live cash position, who owes you and who you owe, stock that is running out, and a short list of things that actually need a decision. Nothing here is typed in by hand: every figure is worked out from the records the other modules already write. Change the period or the company and every number on every screen moves with it.

It is a single HTML file. It opens by double-click, runs with the internet switched off, saves your work in the browser, and checks its own arithmetic **30 different ways** every time it starts.

## What this document covers

1. What this is, and what is inside
2. Where this app sits
3. Screen · Overview
4. Overview, card by card
5. Proof that it is live — the period dial
6. The second dial — one company, or all of them
7. Screen · Sales & Channels
8. Screen · Money
9. Screen · Stock & Making
10. Screen · Companies
11. Screen · Alerts — the five rules
12. What "clearing" an alert does
13. Screen · Wiring
14. Every figure, and where it comes from
15. Connectors — nothing is locked to one company
16. The three rules the app enforces on itself
17. What this app can be wired to
18. The 30 self-tests, in full (1 of 2)
19. The 30 self-tests, in full (2 of 2)
20. How to run it, and what it will not do

# Where this app sits

Every Medhava app stands on **one shared Data Core**: Item/SKU, Party, Stock, Ledger/Voucher and Order. Each module writes into it; Module 01 is the module that reads it.

## What it reads, and from where

| COMES FROM       | WHAT IT SUPPLIES                                        |
|------------------|---------------------------------------------------------|
| Sales            | Invoices, credit notes, channel tags                    |
| Purchase         | Supplier bills and payment terms                        |
| Inventory        | Quantity on hand, cost, reorder point                   |
| Manufacturing    | Pieces produced and wages booked                        |
| Accounting & GST | Opening balances, expenses, receipts and payments       |
| Platform         | Which companies exist, and which one you are looking at |

All four apps of this module are built from one engine file and one screen file. Not four codebases that agree — one implementation, compiled four times. That is why the CEO Dashboard, a report and the group roll-up can never disagree about a figure, and why the fourth app in this module can honestly be all three at once.

# Screen · Overview

The Overview screen. Five cards, the trend on the left, what needs a decision on the right.

## Reading it in thirty seconds

- 1

**Net profit** — did we earn? If it is green you are ahead; the percentage beside it tells you by how much of every rupee sold.
- 2

**Cash + bank** — are we safe? A business can be profitable and still be unable to pay a supplier on Friday. This is the number that answers that.
- 3

**Open alerts** — what needs me? If it is zero, close the laptop. If it is not, the panel on the right already lists them, worst first, with a button that takes you to the screen where you can act.

# Overview, card by card

**Net sales**

What you sold,  
**after returns have been taken off**  
. This is not the figure a marketplace dashboard shows you — theirs is gross.

**Net profit**

What is actually left: net sales – what you bought – wages – running costs. The percentage underneath is that profit as a share of net sales.

**Cash + bank**

Your real position right now. It does  
**not**  
change when you switch period — a balance is a balance, not "profit for June".

**To collect**

Everything your customers still owe you, whatever its age.

**Open alerts**

How many things need a decision. Red the moment there is one.

**Net sales by month**

A bar per month with that month's profit beside it, the best month, and the four-month totals. The badge compares the newest month with the one before.

**What you can click**

- ▶ **Any period button** — April, May, June, July or Full year. Every figure on every screen is recalculated.
- ▶ **Any company button** — one company, or all of them together. Same effect: everything is worked out again.
- ▶ **"Open →" on any alert** — jumps straight to the screen where you can do something about it.

Read it in this order: **Net profit** first (did we earn?), then **Cash + bank** (are we safe?), then **Open alerts** (what needs me?). Thirty seconds, and you know where you stand.

# Proof that it is live — the period dial

This is the same screen as two pages ago. Only one thing was clicked: the period changed from July to April.

April selected. Every card, both panels and the alert list have been recomputed.

## What moved, and what deliberately did not

| FIGURE              | CHANGED? | WHY                                                                                         |
|---------------------|----------|---------------------------------------------------------------------------------------------|
| Net sales           | Yes      | It is a period figure — this is what was sold in April.                                     |
| Net profit & margin | Yes      | Every line that builds it is filtered to April.                                             |
| Cash + bank         | No       | A balance is a position, not a period. "Cash for April" is not a thing.                     |
| To collect          | No       | Money owed is owed today, whichever month it arose in.                                      |
| Open alerts         | Partly   | Stock and payment alerts are about today. Return-rate alerts are recomputed for the period. |

That distinction is the difference between a dashboard you can act on and one that quietly misleads you. Most spreadsheet dashboards filter everything by the date column, which turns a bank balance into nonsense.

# The second dial — one company, or all of them

Same screen again, same period. This time one company was picked instead of the whole group.

One company selected. Flow figures AND balances are now that company's alone.

The company dial behaves differently from the period dial, on purpose. A balance ignores the period — but it does **not** ignore the company. "Cash in April" is nonsense; "Acme Manufacturing's cash" is a real number sitting in a real bank account.

## Two dials, two rules

|                                       | PERIOD   | COMPANY  |
|---------------------------------------|----------|----------|
| Sales, profit, costs, output          | Filtered | Filtered |
| Cash, stock, owed to you, owed by you | Ignored  | Filtered |

Add every company's net sales together and you get the figure shown for "All companies", to the paisa. That is one of the self-tests, not a hope: *"every company added together equals the group"*.

# Screen · Sales & Channels

This screen exists to answer one uncomfortable question: **which channel looks big but is not?**

Screen · Money

Customers who owe you

| CUSTOMER                 | COMPANY                    | AMOUNT      | AGE |           |
|--------------------------|----------------------------|-------------|-----|-----------|
| Northline Retail Pvt Ltd | Acme Manufacturing Pvt Ltd | 1,86,400.00 | 12d | OK        |
| Metro Distributors       | Acme Exports LLP           | 94,200.00   | 38d | overdue   |
| Harbour Trading Co       | Acme Workshop              | 2,12,800.00 | 5d  | OK        |
| Sunrise Enterprises      | Acme Manufacturing Pvt Ltd | 61,500.00   | 72d | chase now |

Suppliers you owe

| SUPPLIER                  | COMPANY                    | AMOUNT      | DUE IN |           |
|---------------------------|----------------------------|-------------|--------|-----------|
| Alpha Industrial Supplies | Acme Manufacturing Pvt Ltd | 1,48,900.00 | 3d     | on time   |
| Beta Components Ltd       | Acme Exports LLP           | 92,400.00   | 39d    | Late      |
| Gamma Materials Co        | Acme Workshop              | 1,89,500.00 | 22d    | on time   |
| Delta Trading             | Acme Manufacturing Pvt Ltd | 64,000.00   | 76d    | very late |

Profit build-up for this period

|                    |              |
|--------------------|--------------|
| Net sales          | ₹6,96,410.00 |
| - Purchases        | ₹3,43,000.00 |
| - Making / wages   | ₹95,000.00   |
| = Gross profit     | ₹2,58,410.00 |
| - Running expenses | ₹2,32,000.00 |
| = Net profit       | ₹26,410.00   |

Cash, who owes you, who you owe — and the profit worked out line by line.

How the ageing tags work

|                       | OK / ON TIME  | OVERDUE / LATE    | CHASE NOW / VERY LATE |
|-----------------------|---------------|-------------------|-----------------------|
| Customers who owe you | Under 30 days | Over 30 days      | Over 60 days          |
| Suppliers you owe     | Not yet due   | Past its due date | Over 60 days late     |

**Net position** — cash plus what you are owed, minus what you owe — is the card to watch. Healthy profit with a negative net position means the money is sitting in somebody else's account, not yours.

**The profit build-up panel at the bottom is the most useful thing on this screen.** It shows profit line by line — net sales, minus what you bought, minus wages, = gross profit, minus running costs, = net profit. Every line moves when you change the period or the company, so you can see exactly which line is eating the margin.

| PKG-01 | Packaging set               | Acme Exports LLP           | 2188 | 808        | 46,280.00   | ok      |

Production by month

| MONTH | COMPANY                    | PIECES | WAGES     | COST PER PIECE |
|-------|----------------------------|--------|-----------|----------------|
| Jul   | Acme Manufacturing Pvt Ltd | 88     | 14,250.00 | 178.13         |
| Jul   | Acme Exports LLP           | 88     | 14,250.00 | 178.13         |
| Jul   | Acme Workshop              | 374    | 66,580.00 | 177.81         |

What you are holding, what is running out, and what the floor produced.

The tag on the right of the stock table is the part to act on: "reorder" means at or below the reorder point — order it today. "low" means within twice the reorder point — order it this week. "ok" means leave it alone.

Cost per piece, in the production table, is the number to watch over time. If wages climb faster than pieces, every piece is costing more and the margin is shrinking quietly.

| CARD        | WHAT IT MEANS                               | WHAT TO DO ABOUT IT                                                                |
|-------------|---------------------------------------------|------------------------------------------------------------------------------------|
| Stock value | Everything held, valued at what it cost you | If this keeps climbing while sales do not, cash is being buried in stock.          |
| Running out | Items at or below their reorder point       | Any number above zero is a purchase list for today.                                |
| Pieces made | What the floor finished in this period      | Compare with units sold — making far more than you sell is how stock value climbs. |
| Making cost | Wages paid for that output                  | Divide by pieces made and watch the trend month to month.                          |

**Why the reorder point, and not a percentage.** A percentage of stock tells you nothing about how long it takes to replace. The reorder point is set per item, from how long your supplier takes to deliver it — so "reorder" genuinely means "order it today or you will run out".

A trading name is not a company. Its orders are the sales of the company it belongs to, and they are counted once — under that company

What this screen will not do

It shows companies; it does not change them. Adding a company, removing what your companies billed each other, and working out which of them may file a return all live in **Group Consolidation**, the third app of this module.

This one reads. That is the whole point of a dashboard.

The same figures, one row per company — and the names you sell under, which are not companies.

A trading name is not a company. A storefront name and a marketplace seller name can both belong to one company. Its orders are that company's sales, counted once, under that company. This screen keeps the two lists apart so nobody can quietly turn a name into a business and double a figure.

This screen reads. Adding a company, removing what your companies billed each other, and working out which of them may file a return all live in **Group Consolidation**, the third app of this module. A dashboard that could change the shape of your group would be a dashboard you could not audit.

Notice the **Plan covers** card. The number of companies you may run is a fact about your subscription, never about the software. A cap written into a product is a rebuild; a cap written into a plan is a decision you can change on a Tuesday.

# Screen · Alerts — the five rules

Nobody types these in. They are worked out from your live figures every time the screen opens. Exactly five rules produce every alert in the system:

- 1

Stock at or below its reorder point. Marked **urgent**. A stock-out stops a production plan, and a plan that stops costs more than the material did.
- 2

Somebody has owed you money for more than 30 days. Marked **watch** — or **urgent** past 60 days.
- 3

A bill you owe has gone past its due date. Marked **watch** — or **urgent** past 60 days late.
- 4

A channel's return rate has reached 12% or more. Marked **watch**. Above 12%, a channel is usually telling you something about the listing or the specification, not about bad luck.
- 5

A company in the group has no tax registration. Marked **watch** — not because it is wrong, but because it is a thing to know: that company counts in every group figure and cannot file a return.

| watch  | Group     | Acme Workshop has no tax registration — it counts in group figures but is left out of returns | Look | Clear |

Cleared

You have cleared 1 alert(s). They come back automatically if the situation gets worse.

Bring them all back

Alert cleared

One alert cleared. The count drops, and a "Cleared" panel appears with a way to bring them all back.

**Clearing changes nothing in your business.** It only records that you have seen it. If the underlying situation gets worse — the stock falls further, the payment goes another month late — the alert comes straight back on its own. "Bring them all back" undoes every clear at once.

- ▶ **An alert list you cannot tick off is an alert list you stop reading.** After a week of seeing the same four lines, your eye skips them — and then you miss the fifth.
- ▶ **Clearing is personal, not shared.** It is stored separately from your business data, so a backup restore never brings back a stale "handled" flag.
- ▶ **It cannot hide a real problem.** The alert is recalculated from live figures every single time the screen opens.
- ▶ **The "Cleared" count tells you how many you are currently suppressing,** so nothing is hidden from you either.

Read this screen once and you will never wonder where a figure came from again.

Where every number comes from

The dashboard owns no data of its own. It reads the shared Data Core and shows you the result.

Shared Data Core: Item/SKU · Party · Stock · Ledger/Voucher · Order — every module reads and writes these.

Every figure on these screens, and its source

| FIGURE HERE               | COMES FROM                                         | HOW IT IS WORKED OUT                                                                                               |
|---------------------------|----------------------------------------------------|--------------------------------------------------------------------------------------------------------------------|
| Net sales                 | Sales                                              | Every invoice added up, minus every credit note (return), for the period and company you picked                    |
| Return %                  | Sales returns                                      | Returns + gross sales, worked out separately for each channel                                                      |
| Net profit                | Sales + Purchase + HR & Payroll + Accounting & GST | Net sales – purchases – making cost / wages – turning expenses                                                     |
| Cash + bank               | Accounting & GST (ledger)                          | Opening balance + everything earned or spent since — a true balance, not a period figure                           |
| To collect                | Accounts Receivable                                | Sum of unpaid customer invoices, aged by how many days old each one is                                             |
| To pay                    | Accounts Payable                                   | Sum of unpaid supplier bills, showing days late or days remaining                                                  |
| Stock value               | Inventory & Catalog                                | Quantity on hand + cost price, item by item                                                                        |
| Running out               | Inventory & Catalog                                | Any item where quantity has fallen to or below its reorder point                                                   |
| Pieces made / making cost | Manufacturing                                      | Output and wages booked by the production floor for the period                                                     |
| Company switcher          | Platform (companies)                               | The list of companies you run — every figure above is re-worked for the one you pick                               |
| Alerts                    | All of the above                                   | Rules applied on live figures — low stock, receivable over 30 days, bill past due, channel return rate 12% or more |

Live example — one sale

1

A sale is recorded in **Retail Stores**, against one of your companies.

2

→ **Net sales** and the channel table move immediately — for that company, and for the group.

3

→ **Stock** falls; if it crosses the reorder point an alert appears here.

4

→ **Money**: the customer balance is added to "to collect".

5

→ **Net profit** recalculates: net sales – purchases – wages – expenses.

This dashboard writes nothing

It is a **read-only** view of the business. Clearing an alert is the only thing stored, and only for you.

That is deliberate: a dashboard that can change your books is a dashboard you cannot trust.

The arithmetic behind every figure above is the **same code** that runs the Report Builder and Group Consolidation — not a copy of it, the same code. That is why the three can never disagree.

Every figure on the Dashboard, its source, and how it is worked out.

The statement at the bottom of that screen is the important one: this dashboard writes nothing. Clearing an alert is the only thing it ever stores, and only for you. That is deliberate — a dashboard that can change your books is a dashboard you cannot trust.

And it is checked, not just claimed. Two of the self-tests read the app's own code: "this app can do exactly four things, and none of them is writing" and "not one of them can add, change or delete a record". If somebody ever wires a save button into this app, the build fails before it ships.

Medhava · CEO Dashboard — Unified ERP — any industry

# Every figure, and where it comes from

This is the same table as the app's Wiring screen, so you have it on paper.

| FIGURE                    | COMES FROM                                         | HOW IT IS WORKED OUT                                                                                               |
|---------------------------|----------------------------------------------------|--------------------------------------------------------------------------------------------------------------------|
| Net sales                 | Sales                                              | Every invoice added up, minus every credit note (return), for the period and company you picked                    |
| Return %                  | Sales returns                                      | Returns ÷ gross sales, worked out separately for each channel                                                      |
| Net profit                | Sales + Purchase + HR & Payroll + Accounting & GST | Net sales – purchases – making cost / wages – running expenses                                                     |
| Cash + bank               | Accounting & GST (ledger)                          | Opening balance + everything earned or spent since — a true balance, not a period figure                           |
| To collect                | Accounts Receivable                                | Sum of unpaid customer invoices, aged by how many days old each one is                                             |
| To pay                    | Accounts Payable                                   | Sum of unpaid supplier bills, showing days late or days remaining                                                  |
| Stock value               | Inventory & Catalog                                | Quantity on hand × cost price, item by item                                                                        |
| Running out               | Inventory & Catalog                                | Any item where quantity has fallen to or below its reorder point                                                   |
| Pieces made / making cost | Manufacturing                                      | Output and wages booked by the production floor for the period                                                     |
| Company switcher          | Platform (companies)                               | The list of companies you run — every figure above is re-worked for the one you pick                               |
| Alerts                    | All of the above                                   | Rules applied on live figures — low stock, receivable over 30 days, bill past due, channel return rate 12% or more |

## The arithmetic of the whole module, in one place

| NAME            | WORKED OUT AS                                                        |
|-----------------|----------------------------------------------------------------------|
| Net sales       | gross sales – returns                                                |
| Return %        | returns ÷ gross sales × 100                                          |
| Gross profit    | net sales – purchases – wages                                        |
| Net profit      | gross profit – running costs                                         |
| Margin %        | net profit ÷ net sales × 100                                         |
| Cash + bank     | opening cash + opening bank + all-time net profit                    |
| Stock value     | for every item: quantity × cost, added together                      |
| Net position    | cash + what you are owed – what you owe                              |
| Cost per piece  | wages for the month ÷ pieces made that month                         |
| Group net sales | every company's net sales added up, – what they billed each other    |
| Group profit    | every company's profit added up. Internal billing cancels itself out |

Every figure is rounded to two decimal places at the moment it is calculated, so a total can never disagree with the rows above it by a stray paisa.

# Connectors — nothing is locked to one company

This is the promise, and the app checks it on itself every time it opens: **no Medhava app depends on any single outside service**. Not one accounting package, not one marketplace, not one AI company, not one automation tool, not one courier.

"Outside services required: 0" is not a marketing line — it is one of this app's self-tests.

# The three rules the app enforces on itself

- 1

No capability has only one choice. Every one has at least three; most have eight to twelve.
- 2

Every capability has a built-in or by-hand option — so the app is fully usable with **nothing connected at all**. No account anywhere, no internet, no subscription. That is how it ships, and it is the default it starts on.
- 3

Every capability has an option you can host yourself — so you are never forced to send your business data to somebody else's cloud, whatever the fashion of the day is.

All three appear as ordinary self-tests on the **Backup & Health** screen, in plain English, alongside the rest — so you can confirm them yourself in five seconds.

**Switching a provider never changes a figure.** The arithmetic lives in Medhava, not in the service. Move from one courier to another and every past shipping record stays exactly as it was — only new labels come from somewhere else. There is a self-test for exactly this: *"switching a provider changes nothing else in your data"*.

## What the four tags on the screen mean

| TAG         | WHAT IT MEANS FOR YOU                                                          |
|-------------|--------------------------------------------------------------------------------|
| built in    | Ships inside Medhava. Needs nothing, costs nothing, works offline.             |
| you host it | You run it on your own machine or server. Your data never leaves your control. |
| their cloud | Somebody else's service, connected with a scoped, revocable key.               |
| by hand     | A person does it, or a CSV goes in and out. Always available.                  |

**Why this rule exists at all.** Software that can only work with one outside company is not a tool you own — it is a bet on somebody else staying cheap, staying available and staying in business. Every capability here has a way out, including a way that needs nobody.

# What this app can be wired to

CEO Dashboard uses 4 capabilities and offers 34 alternatives across them. Every one is a button on the Connectors screen — click it and you have switched.

| CAPABILITY      | THE OPTIONS, IN FULL                                                                                                                         |
|-----------------|----------------------------------------------------------------------------------------------------------------------------------------------|
| Books & ledger  | Medhava Books · Tally · BUSY · Marg · Zoho Books · QuickBooks · ERPNext · CSV in / CSV out                                                   |
| Sales channels  | Type them in · CSV import · Amazon · Flipkart · Myntra · Meesho · Ajo · Nykaa · JioMart · Shopify · WooCommerce · Medusa / self-hosted store |
| Files & backups | This device · A USB drive · MinIO (self-hosted) · Nextcloud (self-hosted) · Google Drive · Dropbox · OneDrive · Amazon S3 · Backblaze B2     |
| Printing        | Browser print / PDF · Any ESC/POS thermal printer · Zebra label printer · TVS printer · No printer — share the PDF                           |

Cloud services use a **scoped, revocable key** — **never your password**. A key can be limited to only what it needs and cancelled in one click from the service's own side, without touching your login. **Medhava will never ask you for a marketplace, bank or account password**. If any screen ever does, it is not Medhava.

## What if the tool you use is not on the list?

Then it becomes one more button. A provider is a small adapter — read from there, write to there — and the app around it does not change, because the arithmetic never lived in the provider. Adding one does not touch a single figure, a single screen or a single self-test.

| WHEN A PROVIDER IS ADDED OR SWAPPED | WHAT HAPPENS                                                                |
|-------------------------------------|-----------------------------------------------------------------------------|
| Your existing records               | Untouched. Nothing is migrated, because nothing was stored in the provider. |
| Every figure on every screen        | Identical — there is a self-test that proves this.                          |
| Your saved work and settings        | Untouched.                                                                  |
| The self-tests                      | Same list, same names, still passing.                                       |
| What you have to relearn            | Nothing. The screens do not change.                                         |

**The practical version of the promise:** if a service you use doubles its price, changes its terms, or shuts down, you click a different button. You do not change software, you do not re-enter data, and you do not lose a day.

# The 30 self-tests, in full (1 of 2)

These run every time the app opens, **before** anything is shown. Menu → **Backup & Health** to see them live. They are written in plain language on purpose — you should be able to read what was checked.

| RESULT | WHAT WAS CHECKED                                   |
|--------|----------------------------------------------------|
| ✓ pass | net sales = gross – returns                        |
| ✓ pass | July sales outside the group = 676000              |
| ✓ pass | gross profit = net sales – purchases – wages       |
| ✓ pass | net profit = gross profit – expenses               |
| ✓ pass | channel net totals equal overall net sales         |
| ✓ pass | period filter works: months add up to all          |
| ✓ pass | switching period changes the numbers               |
| ✓ pass | every company added together equals the group      |
| ✓ pass | the company filter never invents or loses a record |
| ✓ pass | switching company changes the numbers              |
| ✓ pass | a balance ignores the period but not the company   |
| ✓ pass | stock value = qty × cost                           |
| ✓ pass | low stock list only items at/below reorder         |
| ✓ pass | receivables total = sum of balances                |
| ✓ pass | alerts are raised for every low-stock item         |

# The 30 self-tests, in full (2 of 2)

Continued. The last group are the **Connectors** checks — the ones that keep the no-lock-in promise honest.

| RESULT | WHAT WAS CHECKED                                                    |
|--------|---------------------------------------------------------------------|
| ✓ pass | an overdue receivable (>30d) raises an alert                        |
| ✓ pass | clearing an alert removes it                                        |
| ✓ pass | cash balance is a real position, not a period figure                |
| ✓ pass | a company with no tax registration still counts in the figures      |
| ✓ pass | this app can do exactly four things, and none of them is writing    |
| ✓ pass | not one of them can add, change or delete a record                  |
| ✓ pass | every capability this app uses is a known one                       |
| ✓ pass | no capability offers only one choice                                |
| ✓ pass | every capability works with nothing connected (built-in or by hand) |
| ✓ pass | every capability has an option you can host yourself                |
| ✓ pass | exactly one provider is active per capability                       |
| ✓ pass | the default provider never needs an outside service                 |
| ✓ pass | no single company is unavoidable across capabilities                |
| ✓ pass | switching a provider changes which one is active                    |
| ✓ pass | switching a provider changes nothing else in your data              |

If you ever see a red "fail", stop trusting the numbers on screen. Take a backup, reload the file, and report which line failed. Software that tells you when it is broken is worth more than software that is quietly wrong.

# How to run it, and what it will not do

## Running it

1. **Windows:** extract the ZIP, then double-click the `.html` file. It opens in your browser. That is the whole installation.
2. **Mac:** unpack the ZIP, double-click the file. Safari opens it.
3. **Android:** Files app → Downloads → tap the file → open with Chrome. Then ⋮ → **Add to Home screen** and it behaves like any other app.
4. **iPhone / iPad:** Files app → tap the file → Safari. Then Share → **Add to Home Screen**.
5. No internet needed, ever. No account, no licence key, no setup wizard.

## Keeping your data safe

Your figures live in your own browser on your own device — nowhere else, and never on anybody's server. That means nobody can see them, and also that clearing your browser's site data would erase them. So: **Backup & Health** → **Export JSON**, once a week. To move to another device, take the file and the backup with you and use **Import JSON**.

Backup & Health — your data controls, and the live test results below them.

## What it will not do

- ▶ It cannot change a record. That is not a limitation, it is the design — see the Wiring chapter.
- ▶ In this single-file form it does not pull live from your other systems; the hosted version of Medhava is what connects those pipes.
- ▶ It does not sync between your devices on its own — use the backup file.
- ▶ It has no user accounts or passwords. Whoever can open your device can open the app.
- ▶ It will not stop you recording something silly. It checks its own arithmetic, not your judgement.

**Accepted when: the app opens by double-click with no internet · all 30 self-tests show pass · switching the period or the company changes every figure · an alert can be cleared and brought back · a backup exports and imports cleanly.**
