

VASTRANGAM

Vastrangam BOS — one business, one brain

The Business Operating System for Vastrangam Group: 21 modules and 98 apps over one shared data core.

This file is the whole system in plain text — every module, every app, and what each one reads and writes. It is generated from `brand/site/modules.js`, the same file the website and every PDF read, so nothing here can disagree with them. The counts below are not typed in; they are counted from that file each time this page is built.

Modules	21, built in dependency order — a module is only built once everything it needs exists
Apps	98
Working today	16
Still to build	82
Companies	Vastrangam (invoices VS) · Ethnic Fashion trading as Go4Fashion (invoices EF, SKUs GF) · Adini Couture (invoices AC)
Shared data core	Company · Item/SKU · Party · Stock · Ledger/Voucher · Order
Key difference	Not a suite of integrated apps. One application over one database, so there is no sync step and no second copy of any master record
Compliance	Double-entry books with CGST/SGST/IGST, TDS, TCS, input credit on accepted goods, GSTR-1 and GSTR-3B, filed per registration
Channels	Amazon, Flipkart, Myntra, Meesho, Ajio, Nykaa, JioMart, plus your own storefront, the Surat counter, boutique wholesale and export
Security	Row-level isolation per company; outside services connect with scoped, revocable keys — never account passwords
Deployment	Hosted, or single-file apps that run by double-clicking with no install and no internet

The one idea

Every module reads and writes the **same six records**. That is the physical reason a single goods receipt can touch stock, the books, quality and sourcing in the same instant.

every one of the 98 apps reads and writes these, and only these

One stock number, not one per channel. The last piece sold at the Surat counter disappears from Myntra and Flipkart in the same instant — not three hours later as a cancellation, because cancellations are what a seller rating is lost to.

Accepted — not ordered — is what counts. You order 100 metres. 100 arrive. Quality accepts 96. Most systems increase stock by 100 and claim tax credit on 100. This one increases stock by **96**, claims input credit on **96**, raises a debit note for the 4 rejected, and lowers that mill's accept rate — automatically.

Nothing derived is ever stored. Outstanding, ageing, risk, promise dates, cost per piece and profit per design are recomputed on read. A stored total is a number that can drift away from the documents underneath it; a computed one cannot.

How one garment moves through it

The test of whether this is one system or 98 programs sharing a login: sell a single garment and follow it.

sold on a marketplace

one transaction · eight modules · one database

Every module and every app

Listed in build order. Each app is marked **working today** or **designed, not yet built** — nothing is described as finished that is not.

Module 01 · Platform

The spine the whole house runs on.

Not a module you open — the layer underneath all 21. Who can see what, how Vastrangam is configured, and a record of everything that ever happened.

Reads from: Every module **Writes to:** Every module

App	What it does	State
Identity, Settings & Audit	Users, roles and permissions, company switching, tax and numbering setup — and an immutable record of everything that ever happened.	designed, not yet built
Ask & Print	At an exhibition in Hyderabad, send one line from your phone: “ledger Kalamandir”, “print slips”. It comes back as a PDF, or it prints at the Surat office — with nothing plugged into your phone and nothing at the office open to the internet.	working today
Communications	WhatsApp commands and broadcasts, email and SMS, and the handful of scheduled jobs that carry a nudge to the right person without anyone remembering to send it. Every capability here has more than one interchangeable provider — none of them is ever the source of a figure the business reports.	designed, not yet built
Data Privacy & Consent	What a person's data may be used for, captured as consent at the point it is given and honoured everywhere downstream — including the right to have it corrected or removed. Retention (how long a record is kept) and deletion (a person's right to have their own data removed) are two different policies, tracked separately, because a rule that keeps records for the law and a request from a person to be forgotten do not resolve the same way.	designed, not yet built
Payment Data Scope	A written statement of exactly which systems ever see a card or bank credential, and which never do — because every card-capable screen in this system hands that moment to a payment provider's own secured field and never stores or even passes the number through application code. The statement is what an auditor or a partner asks for before they will connect to this system.	designed, not yet built

Module 02 · Design & Sampling

A style exists on paper before it exists as stock.

A product moves from a first idea to something the business can actually make and sell — specification, sample rounds, costed trials and sign-off — before it is ever entered as a catalog record. Building this first means Inventory & Catalog never has to invent a style it has no real specification for.

Reads from: CRM **Writes to:** Inventory & Catalog · Manufacturing

App	What it does	State
PLM & Development	Concept to a design that can actually be made: fabric and trim specification, sample rounds with the mill, costed trials against a target price, and sign-off — every version kept, so last season's costing is still there.	designed, not yet built
Design / IP Register	What protects a design once it exists — trademark or copyright status, the date it was first shown, and a flag the moment a near-identical listing turns up elsewhere. Every version already kept by PLM & Development gets a filed status here instead of just a date stamp, because a design with no ownership record on file is a design nobody can defend.	designed, not yet built

Module 03 · Inventory & Catalog

One stock number everyone trusts.

The most important number in the house: one quantity per design and size, per godown, per stage — greige, dyed, in stitching, finished, listed. Read and written by every other module. And one product record every marketplace lists from.

Reads from: Design & Sampling · Every module **Writes to:** Every module

App	What it does	State
Stock	Live quantity by design, size and location, fabric in metres and pieces in numbers, with reorder alerts, lot tracking, set kits and dead-stock ageing.	designed, not yet built
Catalog / PIM	One record per design — fabric, work, length, colour, size chart, images, HSN, MRP and what each panel actually sells it at — scored for Myntra and Amazon readiness before it lists. It also carries the two things everything downstream needs: the code each panel knows the design by, mapped to yours, and the packed size and weight that decide the courier rate and settle every weight dispute. Every listing's state on every panel is here too — live, waiting for approval, blocked, archived — with the quality score that decides whether anyone sees it.	designed, not yet built
Kit & Combo SKU	A sellable SKU made of component SKUs — a three-piece set sold as one listing. Selling the kit decrements each component at order time, so stock is right for every piece in the set, not just the set itself.	designed, not yet built
Master-Data Hygiene	Duplicate detection and merge across customers, vendors and designs, and a dead-stock register for what has not moved in months. Protects every downstream report from the same record existing twice under two names.	designed, not yet built

Module 04 · CRM

Know every boutique, chain and customer completely.

One record per party — a Kalamandir or a Rajmandir, a Surat walk-in or a Myntra buyer — carrying every enquiry, order, return, agreement and conversation, whichever channel it arrived on.

Reads from: Every module **Writes to:** Sales · E-commerce / OMS · Marketing

App	What it does	State
CRM & Customer 360	Enquiry to confirmed order, then the full lifetime: what they bought, what came back, what they are worth and which new range to show them first.	working today
Documents & eSign	Mill agreements, job-work contracts, signed delivery challans, export documents and boutique credit terms filed against the party or order they belong to — found by that record, not by hunting through a folder.	working today
Helpdesk & Live Chat	A boutique asking where its parcel is, or a customer asking about a size — the question becomes a ticket tied to the order, with the whole history already open.	working today
Forms & Feedback (NPS)	A short form after delivery, and the score it produces attached to the design or item it is actually about — not just the buyer — so a complaint-prone item surfaces as a pattern instead of a scatter of individual gripes.	designed, not yet built

Module 05 · Sales

Counter, wholesale, website and export — one order book.

The Surat counter, the boutique wholesale book, the website and the export shipment all write to the same order and draw on the same stock number. And the parcel is followed to the door, because a sale is not done until the COD money is in.

Reads from: Inventory & Catalog · CRM · Warehouse · Logistics **Writes to:** Inventory & Catalog · Accounting & GST · Warehouse · Logistics

App	What it does	State
D2C Sales	Orders from your own storefront, cart to dispatch, with loyalty and partial COD on a ₹4,400 anarkali.	working today
B2B & Credit	Boutique and chain orders on credit limits and tier pricing, with outstanding aged against each party's own agreed terms.	working today
Export	Commercial invoice, packing list, LUT bond and IGST-refund tracking for the Gulf and UK buyers.	working today
POS	Counter billing at Udhna that draws on the same stock as the website — no second stock register.	working today
Quotes & Proforma	Send a quote, convert it to a confirmed order in one click.	working today
Couriers & AWB	Book the parcel on the order, compare couriers for that pin code, print the label with the design code on it, and follow the AWB to the door.	designed, not yet built
Subscriptions	A schedule that raises its own invoice on its cycle and follows up on its own when a payment fails — for anything sold as a standing order rather than a one-off.	designed, not yet built

Module 06 · Planning & Requirements (MRP)

Turn what is selling into what to buy and make.

Confirmed orders and demand history have to become a plan before Purchase can buy anything or Manufacturing can start anything — otherwise buying and making are both just guessing. This module sits between the two: it reads what is actually selling and what is already committed, and turns that into requirement, not the other way around.

Reads from: Sales · E-commerce / OMS · Inventory & Catalog **Writes to:** Purchase · Manufacturing

App	What it does	State
Demand Forecast & Signal	What sold, by SKU and by period, turned into a short-term forecast — the number every requisition and every production order downstream is measured against instead of a guess.	designed, not yet built
Requirement Explosion (MRP run)	Confirmed demand exploded through the bill of materials into what raw material to buy and what to produce, and by when — so a purchase requisition or a production order always traces back to real demand, never to a feeling that stock is getting low.	designed, not yet built
Open-to-Buy / Budget Ceiling	A spending ceiling set per period regardless of what the demand signal suggests, so a real signal cannot on its own commit more money than the business has decided to risk this season. Every requisition the MRP run drafts is checked against what is left of the ceiling before it goes to Purchase.	designed, not yet built

Module 07 · Purchase

Nothing over-billed by a mill gets paid.

The buy side end to end — mills, dyers, job workers and packing suppliers — with the control that stops you paying for metres you rejected.

Reads from: Inventory & Catalog · Planning & Requirements (MRP) · Manufacturing **Writes to:** Inventory & Catalog · Accounting & GST · Quality & Compliance

App	What it does	State
Procurement	Enquiry to purchase order to goods receipt, with a strict three-way match: you ordered 100 metres, 100 arrived, quality accepted 96, and the bill is only cleared for 96.	working today
Vendor Management	Mill 360 — payables, ageing, a real risk score from accept rate and spend concentration, and sourcing that follows performance rather than habit.	working today
Insurance Register	What cover exists over stock in transit, stock in the warehouse and product liability, matched against what is actually moving through Purchase and Warehouse right now — so real value in transit is never quietly running with no cover tracked anywhere.	designed, not yet built

Module 08 · Manufacturing

Know what a piece really costs to make.

From the cut plan to the finished piece — what each karigar earned, what the dyer charged, what the zari cost, and what that design actually cost before you priced it.

Reads from: Purchase · Planning & Requirements (MRP) · Design & Sampling **Writes to:** Inventory & Catalog · HR & Payroll · Accounting & GST · Quality & Compliance

App	What it does	State
Production Orders	Cutting, stitching, embroidery, washing, finishing and checking — your own stages, with work-in-progress visible at each and nothing lost at the dyer.	designed, not yet built
Piece-rate & Contractors	Karigars paid by the piece: pooled set completion, per-garment rates, alterations, rework and advances resolved into one payout.	designed, not yet built
BOM & Consumption	What each design consumes — metres of fabric, zari, lining, buttons, packing — costed at today's mill rates.	designed, not yet built
Maintenance	Machines and the building: what is due for service, when it was last done, what it cost, and what stopped while it was down.	designed, not yet built

Module 09 · Quality & Compliance

Certify what was received and what was made.

Quality inspection used to live buried as one step inside Manufacturing; it stands on its own here because a rejection at goods-receipt and a rejection on the production floor are the same discipline, and because the certificates a business holds — the proof it follows a standard — belong next to the inspections that back them up, not scattered across email.

Reads from: Purchase · Manufacturing **Writes to:** Purchase · Manufacturing · Inventory & Catalog

App	What it does	State
Quality Control	Accept, reject or send for rework, with reasons that feed the mill's accept rate and the karigar's record.	designed, not yet built
Certificate & Compliance Register	Every standard the business or a vendor holds — a safety, labour or environmental certification — with its issue date, its expiry, and the audit that backs it, so a certificate about to lapse is visible before a buyer asks for it and finds it already expired. What this register tracks is what a sustainability report downstream is actually built from.	designed, not yet built

Module 10 · Warehouse

Pick the right design first time — and prove what you sent.

Bin-level instructions and barcode scanning so the right piece leaves the godown and stock stays honest — and a recording of each parcel being packed, because a wrong-return claim is settled by footage, not by argument.

Reads from: Sales · E-commerce / OMS · Inventory & Catalog **Writes to:** Inventory & Catalog · Sales · E-commerce / OMS

App	What it does	State
Picking & Bins	Pick lists in walking order through the godown, by design and size, so nobody crosses the floor twice.	designed, not yet built
Barcode Operations	Scan to pick, pack, dispatch and run a physical stock count from a phone — the same scan whether the order came from a marketplace, your Shopify site or the counter.	designed, not yet built
Packing Video	Every parcel filmed as it is packed and indexed by its order number, so when a panel says the wrong piece was sent, the clip goes into the claim.	designed, not yet built

Module 11 · Logistics

The courier network — rates, failed deliveries and the COD money.

Booking one parcel happens on the order. This module is the network behind it: what Delhivery, Blue Dart and the rest charge to that pin code before you pick one, what happens to a delivery that fails in a small town, and whether the cash collected at the door reached your bank.

Reads from: Sales · E-commerce / OMS · Warehouse **Writes to:** Accounting & GST · Sales · E-commerce / OMS

App	What it does	State
Rates & Zones	Every courier's rate card by zone, weight slab and service — so the cheapest and the fastest option for this parcel are both known before it is booked.	designed, not yet built
NDR & RTO Rescue	A failed delivery worked while it can still be saved — reattempt, call, correct the address — before it becomes a return you pay for twice.	designed, not yet built
COD Remittance	What the courier collected at the door against what reached the Surat account, parcel by parcel, with every shortfall named and aged.	designed, not yet built
Handover & Manifest	What is expected out today against what the pickup boy actually took, per courier and per service. The manifest to hand him, the one-time code to confirm it, and a signed note of what was left behind — so a parcel lost between the packing table and the van has an owner.	designed, not yet built
Fleet	Your own delivery vehicles, if you run any — what each trip cost, what is due for service, and what that adds to freight. Optional; most businesses run couriers only.	designed, not yet built

Module 12 · Accounting & GST

Books that always balance — and no BUSY needed.

A full double-entry ledger built for Indian compliance, keeping the books itself. B2B sales, returns, mill purchases, payments and receipts are entered by hand because a person decides them; every website, marketplace and counter sale posts itself.

Reads from: Every module **Writes to:** Finance Reports · Treasury & Financial Planning

App	What it does	State
Accounting	Double-entry books where every voucher balances and the trial balance always ties.	designed, not yet built
Invoicing	GST tax invoices and receipts, worked out from the lines to the paise. Where a panel raises its own invoice you keep both numbers on the order — theirs and your own series — so the panel's paperwork and your books point at the same sale.	designed, not yet built
Expenses	Spend captured by category with approvals, and bill OCR to save typing.	designed, not yet built
GST & Tax	CGST, SGST, IGST, TDS, TCS, input credit, GSTR-1 and GSTR-3B — filed per registration, so a group where one company is registered and another is not files exactly what each one owes and nothing it does not.	designed, not yet built
ITC Reconciliation	Every input credit matched against the government's own GSTR-2A/2B before a return is filed, so a credit claimed is a credit that is actually on record.	designed, not yet built
Receivables, Payables & PDC	Payments and receipts allocated against named open invoices, and a register for post-dated cheques that posts only on the date they are realised, not the date they were written.	designed, not yet built
Fixed Assets & Depreciation	The asset register with both Straight-Line and Written-Down-Value depreciation tracked side by side, and disposal posting its gain or loss straight to the books.	designed, not yet built
Year-End Close & Period Lock	Profit-and-loss accounts reset and balance-sheet accounts carry forward at year end, and a reviewed period locks against backdated edits until an admin unlocks it — an act that is itself logged.	designed, not yet built
Finance Reports	P&L, balance sheet, and profit by channel, design and SKU — so you know which anarkali actually earned money after commission, shipping and returns.	designed, not yet built

Module 13 · Treasury & Financial Planning

Know what cash is coming, not just what already arrived.

Accounting records what happened; this module is concerned with what happens next — how much cash is actually expected, when, and whether spend against a budget is on track before the month closes and turns the answer into history.

Reads from: Accounting & GST · Sales · Purchase **Writes to:** Accounting & GST

App	What it does	State
Cash Flow Forecast	Expected receipts and expected payments laid out by week, drawn from open invoices and open bills rather than typed in by hand — so a cash shortfall is visible weeks before the date it would actually bite.	designed, not yet built
Banking & Reconciliation	Bank statement lines matched against the ledger's own record of what should have moved, with anything unmatched surfaced instead of silently carried forward.	designed, not yet built
Budget vs Actual	A budget set per category and period, and actual spend from Accounting tracked against it as the period runs — not only after it closes, when the only thing left to do is explain the variance.	designed, not yet built

Module 14 · Settlement

Get paid what the panels owe you — cycle by cycle.

Matching one payout to one order line happens in OMS. This is the level above: the settlement cycle each panel runs, the commission it actually charged against the rate card it published, and the TCS it deducted in your name.

Reads from: E-commerce / OMS · Accounting & GST **Writes to:** Accounting & GST

App	What it does	State
Payout Cycles	Every settlement cycle each panel runs — what it should pay, what actually landed in the bank, and on which day — so a late payout is visible the day it is late, not at month end.	designed, not yet built
Fee & Commission Audit	The commission a panel publishes for a category against what it actually took, style by style. A quiet rate change is caught the first time it is applied, not at year end — and your seller tier sits on the same screen, because the tier is what the rate card hangs off, and slipping out of one quietly costs more than any single deduction.	designed, not yet built
TCS & TDS Register	Every rupee the panels deducted as TCS, and TDS on job work, matched against the portal's own figures — so the credit you claim is the credit you are owed.	designed, not yet built

Module 15 · E-commerce / OMS

Seven panels, one queue — and every rupee accounted for.

Stop logging into Myntra, then Flipkart, then Ajio. Every marketplace order lands in one pipeline and your stock goes out to all of them — then the money side closes out in the same module: what the panel paid, what it kept as commission, what came back, and what it still owes you.

Reads from: Inventory & Catalog · CRM · Sales · Accounting & GST · Logistics · Settlement **Writes to:** Inventory & Catalog · Accounting & GST · Warehouse · Logistics · Settlement

App	What it does	State
Marketplace OMS	Myntra, Flipkart, Ajio, Amazon, Meesho, Nykaa and JioMart in a single queue — processed all together, channel-wise, or design-wise. The stages the panels really use, with the right cut-off counting down on each order — a quick-commerce or air-shipped order is not due at the same hour as a standard one. Priority orders at the top, and the day grouped by design so a Muskan Purple is picked once for eleven parcels instead of eleven times.	working today
Order Management	One pipeline from new to delivered, whether the order came from a seller panel, your Shopify or WooCommerce site, a dealer or the counter.	working today
Manual Data Check	The order and return sheets you already download from the panels, and the offline registers from the three shops — one file or a whole ZIP — read back as ten cross-checks: net sale after commission and fees, month, design, state, wrong returns, SPF claims, ads, payouts and GST. Every figure clicks through to the transactions behind it.	designed, not yet built
Reconciliation	Match every marketplace payout to the order line that earned it, and expose the gap.	designed, not yet built
Claims & Disputes	Weight disputes, SPF shortfalls, parcels lost in transit and returns that came back with a different piece inside — filed as claims with the packing footage attached, and answered before they close. A claim awaiting your reply is money; one closed for no response is nothing, so the days left sit beside the amount.	designed, not yet built
Returns / RMA	Customer returns, courier returns and wrong returns kept apart — because only one of the three is really your fault, and only one of them turns into dead stock.	designed, not yet built
Channels & Storefronts	Connect a channel once and it stays in step: catalogue out, price out, stock out, orders in. Seven marketplaces and any website platform — Shopify, WooCommerce, Magento, BigCommerce, Wix or a custom site over its own API — each switchable without touching your data. Shopsy and any other storefront a channel runs alongside its main one counts as its own channel here. Where a channel has no open interface, its own downloaded report is a first-class way in. A channel may also know you by a different trading name — that is a label on the channel, not a second company, so it tags the order and the payout without ever splitting your books.	designed, not yet built
Labels & Documents	The panel gives you a PDF; this hands the packing table something it can work from. Cropped to 4×6 for every channel, your design code printed large where the panel left it off, the invoice and slip merged behind it, and the whole batch to the label printer in one job. Reprint one parcel without redoing the lot — and no customer's name and address is ever uploaded to an outside website to be cropped.	designed, not yet built
Listing & Catalog Manager	Bulk-create and bulk-edit listings across every channel from the one product record in Inventory & Catalog, and catch the mismatches that quietly cost sales: listed but out of stock, or in stock but never listed.	designed, not yet built
Size / Fit Recommendation AI	A fit suggestion at the point of purchase, built from the item's own measurements and the return history of buyers who picked each size — aimed straight at the return reason that costs the most: the right item in the wrong size.	designed, not yet built

App	What it does	State
AR / Virtual Try-On	A way to see drape, fit and colour on a screen before buying, for items where a flat photo alone leaves too much to guess.	designed, not yet built

Module 16 · HR & Payroll

Pay everyone right, on time.

Office staff on a monthly salary and karigars paid by the piece, in one register, with attendance driving both and the festival advance already deducted.

Reads from: Manufacturing **Writes to:** Accounting & GST

App	What it does	State
Staff & Contractors	Attendance marked by tap, effective-dated salary, and karigar piece-rate earnings in a single register.	designed, not yet built
Time-off & Advances	Leave, Diwali advances, and exactly how they change this month's payout before you approve it.	designed, not yet built
Appraisal & Hiring	Performance reviews and a hiring pipeline that ends in an employee record.	designed, not yet built
Payout Execution	Where the calculation in the earnings register actually turns into money leaving the business — bank batch, UPI, cash against a signed receipt — with the method and the reference recorded against every payout, so the register's total and the money that actually moved can always be checked against each other.	designed, not yet built

Module 17 · Marketing

Sell more without cutting the price.

Plan the festive calendar, run the campaigns, and let rules keep you competitive on the panels without giving the margin away.

Reads from: Inventory & Catalog · CRM **Writes to:** Sales · E-commerce / OMS

App	What it does	State
Social Calendar	Plan and publish across every channel from one calendar.	designed, not yet built
Campaigns	Email, SMS and WhatsApp campaigns measured on real revenue, not opens.	designed, not yet built
Repricing Engine	Rules per panel and per design — floor, ceiling, match-lowest and a festive override — so a Diwali sale does not quietly go below cost. And what each change actually did: a design whose orders fell after a price rise shows as exactly that, next to the rule that raised it.	designed, not yet built
Automation	If this happens, do that — across any module, without writing code.	designed, not yet built
Blog & Pages	How to drape it, what to wear it to, which fabric for which season — written, scheduled and published to your own site with the meta and internal links already set.	designed, not yet built
Events	Trade shows and exhibitions worked as a channel of their own — booth, budget and every lead captured on the floor landing straight in CRM instead of on a stack of business cards.	designed, not yet built
Markdown / Clearance Optimization	The same rule engine that reprices for competitiveness, aimed at ageing stock instead: when to start discounting it and by how much, before it becomes a warehouse write-off rather than a sale at a lower margin.	designed, not yet built

Module 18 · AI Content Engine

Write it, shoot it, cut it — from your own catalogue.

Listings, ads, reels and product photography generated from your own designs, in a voice that sounds like one person from Surat rather than a template — so the words match the piece and the picture is the size Myntra actually wants.

Reads from: Inventory & Catalog **Writes to:** Marketing · E-commerce / OMS

App	What it does	State
Content Engine	Fourteen stages in your own voice — buyer psychology, competitor reading, hooks, the product description, marketplace copy for Amazon and Myntra, ad variations, reel scripts, song lyrics for the reel, the calendar, size chart and alt text.	designed, not yet built
Image Studio	A phone photo becomes a listing image: layers, free transform, background removal, Myntra 1080×1440 and every other channel preset, watermark and SEO alt text.	designed, not yet built
Video Studio	Text and image to video, reels and ad cuts sized for every channel.	designed, not yet built
Design Studio	Banners, festive creatives and thumbnails — templates, layers, undo and redo, any colour, exact sizing and stock elements, exporting PNG, JPG or PDF at whatever size the panel or the printer asks for.	designed, not yet built
Publisher	One push sends the listing, images and copy to the website and every panel, and reports back what went live and what a panel rejected, with the reason.	designed, not yet built

Module 19 · SEO, AEO & AIO

Be found by a search box, an answer box and an AI.

Content already exists once this module is reached; here it is made findable — by a traditional search engine, by the answer box above the results, and by the AI assistants now answering shopping questions directly instead of sending someone to a results page.

Reads from: Inventory & Catalog · AI Content Engine **Writes to:** Marketing

App	What it does	State
Technical SEO & Schema	Structured data, sitemaps and page-level technical checks against your own storefront and content pages, so a search engine can read what a page is actually about instead of guessing from the text alone.	designed, not yet built
Answer-Engine Optimization	Content shaped to be quoted directly by an answer box or a voice assistant — a clear, citable answer near the top of the page — rather than written only for a person to scroll through.	designed, not yet built
AI-Engine Visibility Tracking	Whether and how this business is actually cited when someone asks an AI assistant a shopping question in this category, tracked over time — the same discipline as rank tracking, aimed at a newer kind of result page.	designed, not yet built

Module 20 · Projects & Collaboration

The work that is not an order — and the talking around it.

An exhibition in Hyderabad, a boutique's custom order, a new godown fit-out, a legal matter with a supplier. Work that is not a sales order still has a deadline, a cost and documents — and it belongs on the same records as

everything else.

Reads from: CRM · Sales · HR & Payroll · Inventory & Catalog **Writes to:** Accounting & GST · HR & Payroll · CRM

App	What it does	State
Projects & Cases	An exhibition, a custom order for a chain, a fit-out or a dispute — stages you define, owners, deadlines, documents, hours and real cost, all on one record the ledger can see.	designed, not yet built
Timesheets & Planning	Who is on what this week and the hours that actually went in — against a project, an exhibition or a machine — with billable and non-billable kept apart.	designed, not yet built
Approvals	One queue for everything waiting on a yes: a mill purchase order, a boutique discount, a leave day, a credit note, a payment. The rule that sent it there is next to it, and the decision goes on the record.	designed, not yet built
Forum	Questions and answers that outlive a chat — for customers, dealers or staff — with the useful ones kept where the next person will actually find them.	designed, not yet built
Discuss	The conversation attached to the record it is about — this order, this mill bill, this dispute — so a year later the reason for the decision is still sitting beside it.	designed, not yet built
Knowledge Base	A searchable internal wiki of standard operating procedures, scoped to the role it applies to, so how a task is meant to be done is written down once instead of carried in one person's head.	designed, not yet built

Module 21 · Dashboard & BI

See the whole house without asking anyone.

Every number rolls up here as work happens — the day's marketplace orders, what the karigars finished, what is still lying at the dyer, what the mills are owed. No exports, no waiting for month-end.

Reads from: Every module **Writes to:** —

App	What it does	State
CEO Dashboard	Cash, sales by channel, stock by design, profit per piece and the alerts that matter — one screen, refreshed as the day runs.	working today
Report Builder	Drag the fields you want into a report and save it for the whole team.	working today
Group Consolidation	Ethnic Fashion, Vastrangam and Adini Couture as one set of figures, inter-company transfers removed, so the group position is real rather than three spreadsheets added together. Adini Couture has no registration of its own and mainly does job work — it still counts in the group, without being pulled into a return it does not belong in. Add the fourth company the day you open it.	working today
Excel Dashboard Builder	A full workbook — financial summary, HR, purchase, sales, inventory and production, GST, expenses — generated from the live records behind every other screen, with each company shown as its own row and a consolidated row that is a formula over them, never a separately typed total.	designed, not yet built
ESG / Sustainability Reporting	Water usage, chemical compliance, waste and packaging, reported from the same certificate and audit records Quality & Compliance already keeps — so a sustainability report is a query over evidence already on file, not a separate exercise assembled once a year from scratch.	designed, not yet built

The rules that hold everywhere

1. **No app depends on any single outside company.** Every capability — books, marketplaces, AI writing, couriers, payments, messaging, storage, GST, printing, barcode — has several interchangeable providers and a by-hand option, so the system works with nothing connected at all. **A provider named as the source of a figure is a bug;** providers move messages and money, the ledger originates numbers.
2. **The books are this system's own.** No other accounting package is required, ever. Tally, BUSY and Zoho remain available for anyone already running one — nothing assumes them, and no figure is ever sourced from one.
3. **Nothing ever asks for an account password.** Outside services connect with a scoped, revocable key. *This system will never ask you for a marketplace, bank or account password. If any screen ever does, it is not this system.*
4. **Money is integer paise, never a floating-point number,** because float arithmetic accumulates the error that eventually shows up as a trial balance that will not tie.
5. **Values that change over time are effective-dated** — a salary, a price, a tax rate, a commission. March payroll resolves the salary in force *in March*. A missing value is an error, never silently treated as zero.
6. **Nothing is deleted, only deactivated.** A person who leaves keeps their name attached to years of earnings, approvals and audit rows that must still resolve.
7. **The audit trail has no off switch.** Eight years, before-and-after values, as the MCA rule requires — because an audit trail that can be switched off is one that gets silenced exactly when it matters.

8. **Gates, not warnings.** Each app refuses one thing outright, because a warning gets clicked through on a busy afternoon. A cash-on-delivery order cannot be packed below its advance. A bill for more than was accepted cannot be paid. Every gate is also a self-test.
 9. **It is not trained. It is built.** No model learns from your data. Every rule is written down, visible on the Wiring screen, and checked by a self-test — so it is right on day one.
 10. **You can reach it from anywhere, but it cannot be reached into.** Ask & Print takes a plain line from your phone and sends a PDF back. The office reaches out; the internet never reaches in.
-

How it is verified

Nothing ships because it looked right on a screen.

1. **The arithmetic, with no screen involved.** Each engine runs in isolation and its self-tests execute against seeded data.
 2. **Every screen and every control, in a real browser.** Each build opens in headless Chromium; every screen is visited and every interactive control on it is clicked. Any console error fails the build.
 3. **The real job, with the result asserted.** Not "does the button click" but "did the thing happen". A control that looks alive but changes nothing fails the build.
 4. **Against the owner's own figures.** Where the business already knows the answer, the software has to reproduce it exactly — the karigar costing run must return **25,307 sets, 59,110 pieces and ₹26,90,062** across 143 designs and 29 karigar units, with the 5 no-rate designs flagged rather than guessed. A mismatch is a bug, not a rounding difference.
 5. **A structural audit.** Every "comes from" on every Wiring screen must name a module that actually exists, no vendor name may ever be the source of a figure, and the app count in every file must match this one.
 6. **The shipped copy, not the working copy.** The packaged archive is extracted and re-tested in the folder a customer would open it in, because a packaging step that quietly renames a file breaks nothing until it is in somebody's Downloads folder.

The honesty charter

This is the standard the build is held to, and it is written down because a standard nobody wrote down is a standard nobody can be held to.

1. **Nothing is called finished that is not.** Every deliverable is labelled tool, stub, mockup or spec. A mockup stays labelled a mockup even when a working version would be more impressive to show. Generation features stay badged as mockups until a real paid API is actually wired.
2. **Counts are counted, never claimed.** Every module and app figure on this page is read from the canonical module list when the page is built. No number here was typed by hand.

3. **Progress is reported as it is.** If tests fail, the failure is shown with its output. If a step was skipped, it is named as skipped. "Done" means implemented, tested and checked against the original request — not "the code has been written".
4. **The gap is stated, not buried.** 16 of 98 apps work today. The other 82 are designed and specified. Those 16 still run on their own storage, and rewiring them onto the shared core is the first job of Module 01 — until that is done they are good tools, not yet one system.
5. **Uncertainty is surfaced, not smoothed over.** Where something cannot be verified, it is reported as unverified rather than presented as fact.
