

VASTRANGAM — ETHNIC-WEAR D2C + MARKETPLACE

CRM & Customer 360

Lead → won → the whole lifetime, in one record

Module 02 · CRM — App 1 of 1

One record per buyer, carrying everything Vastrangam knows. Before they buy it is a pipeline with honest odds; after they buy it is every indent, every parcel that came back, and what that buyer is really worth once returns come off.

One file · opens by double-click

Works offline

38 / 38 self-tests pass

Win a deal, the customer appears

What this is, and what is inside

This app does **two jobs that most software splits into two products** — and it does them in one record, so nobody is ever typed in twice.

Before they buy — a LEAD

They sit in a pipeline, moving from New to Contacted to Quoted to Negotiation. Every stage carries a real probability of closing, so the forecast is honest instead of hopeful.

After they buy — a CUSTOMER

Every order, everything sent back, what they are actually worth once returns come off, how long since you last heard from them, and which of six behaviour groups they are in.

Mark a deal **Won** and the customer appears on the Customers screen immediately. There is no export, no re-keying, and no gap where somebody gets forgotten.

What it never does: touch your orders, invoices, stock or ledger. Worth, returns and last-order date are **read** from Channel Manager and Sales — never typed in here. That is why the customer value on this screen cannot disagree with what Channel Manager and Sales says. There is only one copy of it.

What this document covers

1. What this is, and what is inside
2. Where CRM sits
3. The process — a lead becomes a customer
4. Screen · Overview
5. Why "likely to close" is the number to trust
6. Screen · Pipeline — where you actually work
7. Adding a lead, and what is refused
8. Moving a deal on — one stage at a time
9. Winning a deal — the customer appears
10. Losing a deal, and why that is worth recording
11. Screen · Customers
12. Filtering to one group
13. Screen · Customer 360
14. The conversation log — the one thing only you know
15. Screen · Segments & offers
16. Every figure, and how it is worked out
17. Connectors — nothing is locked to one company
18. The three rules the app enforces on itself
19. What this app can be wired to
20. The 38 self-tests, in full (1 of 2)
21. The 38 self-tests, in full (2 of 2)
22. How to run it, and what it will not do

Where CRM sits

Every Medhava app stands on **one shared Data Core**: Item/SKU, Party, Stock, Ledger/Voucher and Order. CRM owns the lead and the conversation. Everything about money and orders it reads.

What it reads, and from where

COMES FROM	WHAT IT SUPPLIES
Channel Manager	Myntra / Flipkart / website orders, returns and settlements
Sales & Orders	Every wholesale indent and export order, and anything returned
Accounts / BUSY	Whether the buyer actually paid, and how late
Catalog	Which designs and fabrics they bought, so the next offer makes sense
CEO Dashboard	Reads buyer value and the at-risk count back out

Two things CRM owns outright. The **lead** — its stage, its value, why it was lost — and the **conversation log**. Nothing else in the business records what was said on a call or promised at an exhibition, which is why those two are the only things in this app that are typed in by hand.

The process — a lead becomes a customer

Five steps. Only the first three need a human; the last two happen on their own.

- 1 A lead arrives.** A boutique messages you on Instagram, a buyer refers another buyer, you meet somebody at an exhibition, or a marketplace category manager gets in touch. You type the name, the boutique or firm, where it came from, and your honest estimate of the value. It lands at **New**.
- 2 You move it on.** One stage at a time — New → Contacted → Quoted → Negotiation. It never skips and never goes backwards. The **weighted pipeline** changes the moment you press the button, because the odds changed.
- 3 Won or lost.** Won creates the customer **right then**. Lost records a reason and leaves the pipeline — but stays in the record, because lost deals are what your win rate and your "where deals are lost" table are made of.
- 4 Their orders appear by themselves.** Their first indent is recorded in Sales, or their marketplace orders arrive through Channel Manager, and everything appears on their Customer 360 by itself. Nobody enters an order in CRM. Their worth, their returns and their average order size all follow.
- 5 Their segment looks after itself.** Order four times in six weeks and they become a Champion. Go quiet for 90 days and they become At risk — and appear on the Overview under "who needs a call". Nobody tags anybody.

The point of steps 4 and 5: a CRM that needs somebody to remember to update it is out of date within a month. Nothing in this one has to be maintained.

What is left for a human to do — exactly three things

YOU DO	WHY ONLY YOU CAN
Add a lead	Nothing else in the business knows an enquiry arrived.
Move it on, or mark it won / lost	Only you know whether a price is genuinely on the table.
Log what was said	A promise made on a call exists nowhere else. If it is not written down, it is gone the day you are unavailable.

Three actions. Everything on all seven screens is worked out from those three and from what the rest of the business already records.

Screen - Overview

Why "likely to close" is the number to trust

A deal that arrived yesterday and a deal where you are arguing over the last 2% are both "open" — but they are not remotely the same thing. So every stage carries a probability:

New	Contacted	Quoted	Negotiation
10%	25%	50%	75%
just arrived, nothing agreed	you have spoken, there is interest	a price is on the table	down to terms
The odds are fixed and visible. Nobody adjusts them per deal, so nobody can flatter a forecast.			

A ₹10,00,000 DEAL...	COUNTS AS	BECAUSE
sitting at New	₹1,00,000	Nothing has been agreed yet
at Contacted	₹2,50,000	There is real interest
at Quoted	₹5,00,000	A price is on the table
at Negotiation	₹7,50,000	You are down to terms

This is why the weighted figure is always smaller than the raw pipeline — and why it is the one to plan cash against. A pipeline of ₹25,00,000 that weights down to roughly half of that is not bad news; it is the truth arriving earlier than it otherwise would.

The other four cards

Open pipeline

Every live deal added up. The optimistic number — useful only next to the weighted one.

Win rate

Deals won ÷ (won + lost). Needs lost deals to be recorded, which is why "Lost" matters.

Customer value

What your existing customers are worth — orders minus returns. Never gross.

Going cold

How many customers have not ordered in 90 days. Red the moment there is one.

Screen · Pipeline — where you actually work

A card per stage, the add-a-lead form, then every open deal with three buttons on each row.

What the open-deals table shows you, column by column

COLUMN	WHAT IT IS
Deal	The contact name, with the boutique or firm underneath.
Source	Where it came from — worth reviewing once a quarter to see which source actually converts.
Value	Your estimate.
Stage	Which stage, and its odds, side by side.
Worth × odds	Value × odds — what this one deal is really worth to a forecast.
Age	Days since it arrived. Turns red past 45 days.

Medhava · CRM & Customer 360 — Vastrangam — ethnic-wear D2C + marketplace

7 / 23

Adding a lead, and what is refused

Four boxes at the top of the Pipeline screen.

BOX	WHAT TO PUT IN IT
Contact / buyer name	The person you actually talk to. Required.
Boutique / firm / marketplace	The boutique, the wholesale firm, or the marketplace. A website customer may not have one.
Where did it come from	Boutique enquiry · Referral from a buyer · Exhibition / trade fair · Marketplace category manager · Instagram DM
Deal value (₹)	Your honest estimate. Required, and must be above zero. It does not have to be exact — the stage odds already account for uncertainty.

Mahesh Rath	1,75,000.00	Went to a Surat competitor
Sneha Kulkarni	1,30,000.00	Delivery date did not suit

A lead added. It appears at the New stage and the New card grows by its value.

A lead with no name, or no value, is refused. That is deliberate. A pipeline full of blank rows is worse than no pipeline at all — it produces a forecast nobody believes, and then nobody looks at the screen again.

Maresh Rathi	1,75,000.00	Went to a Surat competitor
Sneha Kulkarni	1,30,000.00	Delivery date did not suit

One press, one stage. The odds went from 10% to 25%, so the weighted pipeline rose.

Why it cannot skip a stage. "Quoted" means a price is genuinely on the table. If the button let you jump straight there from New, the 50% odds would stop meaning anything, and the weighted pipeline — the only number worth planning against — would quietly become fiction.

Deals in Negotiation have no "Move on" button. The only way out of the last stage is Won or Lost. There is nowhere else for a deal to go.

Watch the Age column. It turns red past 45 days. An old deal at an early stage is almost always a dead deal that nobody has admitted to yet — and it is inflating your pipeline while it sits there.

Mahesh Rathi	1,75,000.00	Went to a Surat competitor
Sneha Kulkarni	1,30,000.00	Delivery date did not suit

Marked won. It leaves the open pipeline, joins the Won panel, and the win rate moves.

The important part is not on this screen. Pressing **Won** also created the customer. Go to the Customers screen and they are there — with a segment of "New", ready for their first order. You never re-type anybody, and nobody falls through the gap between "we won it" and "they are a customer".

Medhava · CRM & Customer 360 — Vastrangam — ethnic-wear D2C + marketplace

10 / 23

Losing a deal, and why that is worth recording

Pressing **Lost** marks the deal lost and records **why**, based on how far it had got. The deal leaves the pipeline but stays in the record.

LOST AT	RECORDED REASON
New	Wanted a lower rate
Contacted	Went to a Surat competitor
Quoted	Delivery date did not suit
Negotiation	Could not agree credit terms

Why bother recording a loss at all?

- ▶ **Your win rate is meaningless without it.** Win rate is $\text{won} \div (\text{won} + \text{lost})$. Only record the wins and it is always 100%.
- ▶ **The "where deals are being lost" table on the Overview** is built entirely from these reasons. After three months it is the most useful table in the app.
- ▶ **One reason appearing over and over is not bad luck.** If "Wanted a lower rate" keeps coming up, that is a pricing decision or a listing problem — something you can act on. Nobody notices a pattern they never wrote down.

The temptation is to leave losses "open" so the pipeline looks bigger. Do that and within two months the pipeline is mostly deals that died, the forecast is worthless, and the one table that would have told you why is empty.

What happens to the numbers when you press Lost

FIGURE	WHAT IT DOES
Open pipeline	Falls by that deal's value — immediately.
Likely to close	Falls by value $\times$ the odds of the stage it died at.
Win rate	Falls, because the denominator grew. This is the honest part.
Where deals are being lost	Gains a row, or an existing row gains a deal and its value.
The Lost panel	Keeps the deal permanently, with its reason.

There is no "delete a deal" button anywhere in this app. A deal is won or lost; it never disappears. That is what makes the win rate trustworthy — nobody can improve it by quietly removing the failures.

Marked lost

Everybody you have won — sorted by what they are actually worth, not by what they ordered.

The table is sorted by Worth, not Gross. This matters more in ethnic wear than almost anywhere. A marketplace account with a huge gross and 14% coming back can be worth less than a Jaipur boutique at 4%. Sorting by gross hides that; sorting by worth shows it.

Filtering to one group

The row of buttons filters the list to one behaviour group. Below, only the customers who have gone quiet.

A note logged. It appears below with its date, newest first.

This is the only place in the app where you are the source of truth. Every other figure is read from somewhere else and can be recalculated. What was said on the call and what was promised at the exhibition exists nowhere but here — so if it is not written down, it is gone the day the person who took the call is unavailable.

The channel-mix panel above it is the other panel worth reading slowly. This is the panel that settles arguments. If Flipkart is responsible for most of a buyer's returns while Myntra is clean, the problem is that listing — the size chart, the fabric description, the photography — not the buyer and not the cloth.

Screen - Segments & offers

Six groups. Every customer is in exactly one. Nobody tags anybody by hand, and the groups recalculate themselves the moment somebody orders or goes quiet.

GROUP	A CUSTOMER LANDS HERE WHEN	WHAT IT MEANS
Champion	Bought 4+ times, and bought in the last 45 days	Your best. Hold on to them.
Loyal	Bought 2+ times, and bought in the last 60 days	Reliable. Grow the order size.
Needs attention	Bought 2+ times, but quiet for 60–90 days	Something changed. Find out what.
At risk	Has not bought in 90 days	Call this week, not next month.
Sleeping	Has not bought in 180 days	One last try, then stop spending.
New	Bought once, or not yet at all	Make the second order easy.

Customers - Segments

Segments & offers

Every customer falls into exactly one group, by the same rule, every time. No guessing, no manual tagging.

Segments are worked out from behaviour — how many times they bought and how long ago — not from anybody's opinion.

The rules, in plain words

SEGMENT	A CUSTOMER LANDS HERE WHEN	CUSTOMERS	WORTH	SHARE OF VALUE
Champion	Bought 4 or more times, and bought in the last 45 days	2	11,02,600.00	
Loyal	Bought 2 or more times, and bought in the last 60 days	1	1,88,300.00	
Needs attention	Bought 2 or more times, but has been quiet 60–90 days	1	1,77,000.00	
At risk	Has not bought in 90 days	1	2,54,000.00	
Sleeping	Has not bought in 180 days	1	1,06,900.00	
New	Bought once, or not yet at all	3	39,500.00	

What to say to each group

SEGMENT	CUSTOMERS	WHAT TO OFFER NEXT	
Champion	2	Give them first look at the new season and hold their rate. Ask for the festive indent early — they will commit.	See the 2 --
Loyal	1	Push the indent size up. A small rate break on 40 pieces costs less than finding a new boutique.	See the 1 --
Needs attention	1	One phone call, not a discount. In this trade it is usually a delivery date or a size-chart complaint, not price.	See the 1 --
At risk	1	Call within the week. Ask what went wrong on the last lot — with fabric, something usually did.	See the 1 --
Sleeping	1	One clear win-back offer tied to the festive window. If it does not land, stop spending on them.	See the 1 --
New	3	Make the second order easy. The gap between one lot and two is where most boutiques are lost.	See the 3 --

Why this matters

In ethnic wear the temptation is to chase whoever places the biggest order and ignore everybody else. These six groups are worked out from behaviour instead — how often somebody indents and how long ago — so effort goes where it returns something. A Jaipur boutique that reorders every six weeks at 4% returns is often worth more than a marketplace account with a huge gross and 14% coming back.

Change nothing and the segments still update themselves — the moment somebody orders, or stops ordering, they move group on their own.

Logged ✓

Each group with its rule, how many customers, what they are worth, and its share of your total customer value.

A boutique that reorders every six weeks is worth holding on to. A chain that has been silent since last Diwali needs one win-back offer tied to the festive window, and then letting go. In this trade the temptation is to chase whoever places the biggest indent and ignore everybody else — which is how a reliable ₹8 lakh-a-year boutique quietly walks away.

Every figure, and how it is worked out

This is the same table as the Wiring screen, so you have it on paper.

FIGURE	COMES FROM	HOW IT IS WORKED OUT
Open pipeline	CRM itself (this app owns leads)	Every boutique enquiry and marketplace conversation still open, added up
Likely to close	CRM + stage odds	Each deal × the probability of its stage: New 10%, Contacted 25%, Quoted 50%, Negotiation 75%
Win rate	CRM	Deals won ÷ (deals won + deals lost)
Customer worth	Channel Manager + Sales	Every order that buyer placed, minus every parcel that came back — this is the number that matters, not gross
Returns and return %	Marketplace returns + sales returns	Returned value ÷ gross ordered value, per buyer. Myntra and Flipkart are tracked separately because their behaviour differs
Average order value	Sales / Orders	Buyer worth ÷ number of indents they placed
Last order date	Sales / Orders	The newest indent on that buyer — this is what drives the segment
Segment	All of the above	One rule set on indent count and days since the last one — never tagged by hand
What to offer next	Segment	One agreed action per group, so the same buyer gets the same answer whoever opens the record
Conversation log	CRM itself	Calls, exhibition meetings and promises you record — the only thing here that is typed in

The arithmetic, in one place

NAME	WORKED OUT AS
Open pipeline	every deal still open, added up
Likely to close	for each open deal: value × the odds of its stage
Win rate	deals won ÷ (deals won + deals lost) × 100
Worth × odds (per deal)	deal value × stage odds
Customer worth	all their orders – everything they returned
Return %	returned value ÷ gross ordered × 100
Average order value	customer worth ÷ number of orders
Last order age	today – the date of their newest order
Repeat rate	customers with 2+ orders ÷ customers with any order × 100
Total customer worth	every order ever placed – everything ever returned

Every figure is rounded to two decimal places at the moment it is calculated, so a total can never disagree with the rows above it by a stray paisa — and the segment values always add up to the total customer worth. Both are self-tests.

Connectors — nothing is locked to one company

This is the promise, and the app checks it on itself every time it opens: **no Medhava app depends on any single outside service.** Not one accounting package, not one marketplace, not one AI company, not one automation tool, not one courier.

"Outside services required: 0" is not a marketing line — it is one of this app's self-tests.

The three rules the app enforces on itself

- 1 **No capability has only one choice.** Every one has at least three; most have eight to twelve.
- 2 **Every capability has a built-in or by-hand option** — so the app is fully usable with **nothing connected at all**. No account anywhere, no internet, no subscription. That is how it ships, and it is the default it starts on.
- 3 **Every capability has an option you can host yourself** — so you are never forced to send your business data to somebody else's cloud, whatever the fashion of the day is.

All three appear as ordinary self-tests on the **Backup & Health** screen, in plain English, alongside the rest — so you can confirm them yourself in five seconds.

Switching a provider never changes a figure. The arithmetic lives in Medhava, not in the service. Move from one courier to another and every past shipping record stays exactly as it was — only new labels come from somewhere else. There is a self-test for exactly this: *"switching a provider changes nothing else in your data"*.

What the four tags on the screen mean

TAG	WHAT IT MEANS FOR YOU
built in	Ships inside Medhava. Needs nothing, costs nothing, works offline.
you host it	You run it on your own machine or server. Your data never leaves your control.
their cloud	Somebody else's service, connected with a scoped, revocable key.
by hand	A person does it, or a CSV goes in and out. Always available.

Why this rule exists at all. Software that can only work with one outside company is not a tool you own — it is a bet on somebody else staying cheap, staying available and staying in business. Every capability here has a way out, including a way that needs nobody.

What this app can be wired to

CRM & Customer 360 uses **6** capabilities and offers **56** alternatives across them. Every one is a button on the Connectors screen — click it and you have switched.

CAPABILITY	THE OPTIONS, IN FULL
Sales channels	Type them in · CSV import · Amazon · Flipkart · Myntra · Meesho · Ajio · Nykaa · JioMart · Shopify · WooCommerce · your own store
Books & ledger	Medhava Books (built in) · Tally · BUSY · Marg · Zoho Books · QuickBooks · ERPNext (self-hosted) · CSV to your CA
Customer messaging	Copy and send it yourself · WhatsApp Cloud API · Gupshup · Interakt · MSG91 · Twilio · email instead · Chatwoot (self-hosted)
Email sending	Download and send it yourself · any SMTP server · Amazon SES · SendGrid · Postmark · Mailgun · Zoho Mail · Brevo
Files & backups	This device · a USB drive · MinIO or Nextcloud (self-hosted) · Google Drive · Dropbox · OneDrive · Amazon S3 · Backblaze B2
Automation	Medhava Rules (built in) · n8n · Node-RED · Windmill · Airflow (all self-hosted) · n8n Cloud · Make · Zapier · Pipedream · cron + webhook · by hand

Cloud services use a scoped, revocable key — never your password. A key can be limited to only what it needs and cancelled in one click from the service's own side, without touching your login. **Medhava will never ask you for a marketplace, bank or account password.** If any screen ever does, it is not Medhava.

What if the tool you use is not on the list?

Then it becomes one more button. A provider is a small adapter — read from there, write to there — and the app around it does not change, because the arithmetic never lived in the provider. Adding one does not touch a single figure, a single screen or a single self-test.

WHEN A PROVIDER IS ADDED OR SWAPPED	WHAT HAPPENS
Your existing records	Untouched. Nothing is migrated, because nothing was stored in the provider.
Every figure on every screen	Identical — there is a self-test that proves this.
Your saved work and settings	Untouched.
The self-tests	Same list, same names, still passing.
What you have to relearn	Nothing. The screens do not change.

The practical version of the promise: if a service you use doubles its price, changes its terms, or shuts down, you click a different button. You do not change software, you do not re-enter data, and you do not lose a day.

The 38 self-tests, in full (1 of 2)

These run every time the app opens, **before** anything is shown. Menu → **Backup & Health** to see them live. They are written in plain language on purpose — you should be able to read what was checked.

RESULT	WHAT WAS CHECKED
✓ pass	every open deal sits in a real stage
✓ pass	open pipeline = the open deals added up
✓ pass	weighted pipeline = each deal × its stage odds
✓ pass	weighted pipeline is never more than the raw pipeline
✓ pass	stage totals add up to the whole pipeline
✓ pass	win rate = won ÷ (won + lost)
✓ pass	a lost deal is never counted in the pipeline
✓ pass	moving a deal on advances it exactly one stage
✓ pass	moving a deal on raises its weighted value
✓ pass	winning a deal takes it out of the open pipeline
✓ pass	winning a deal adds its value to the won total
✓ pass	a customer's worth = their orders minus their returns
✓ pass	order count matches the order list
✓ pass	total customer worth = every order minus every return
✓ pass	average order value = worth ÷ number of orders
✓ pass	return rate is always between 0 and 100
✓ pass	nobody has a negative last-order age
✓ pass	repeat rate = customers who bought twice ÷ customers who bought
✓ pass	every customer lands in exactly one segment

The 38 self-tests, in full (2 of 2)

Continued. The last group are the **Connectors** checks — the ones that keep the no-lock-in promise honest.

RESULT	WHAT WAS CHECKED
✓ pass	segment counts add up to the number of customers
✓ pass	segment values add up to the total customer worth
✓ pass	a Champion has bought 4+ times and bought recently
✓ pass	an At-risk customer has not ordered in 90 days
✓ pass	a Sleeping customer has not ordered in 180 days
✓ pass	every segment has an offer written for it
✓ pass	a customer's channel mix adds up to their gross
✓ pass	a customer's channel mix adds up to their worth
✓ pass	a logged note appears on that customer
✓ pass	a logged note appears on nobody else
✓ pass	every capability this app uses is a known one
✓ pass	no capability offers only one choice
✓ pass	every capability works with nothing connected (built-in or by hand)
✓ pass	every capability has an option you can host yourself
✓ pass	exactly one provider is active per capability
✓ pass	the default provider never needs an outside service
✓ pass	no single company is unavoidable across capabilities
✓ pass	switching a provider changes which one is active
✓ pass	switching a provider changes nothing else in your data

If you ever see a red "fail", stop trusting the numbers on screen. Take a backup, reload the file, and report which line failed. Software that tells you when it is broken is worth more than software that is quietly wrong.

How to run it, and what it will not do

Running it

1. **Windows:** extract the ZIP, then double-click `CRM_Customer_360.html`. It opens in your browser. That is the whole installation.
2. **Mac:** unpack the ZIP, double-click the file. Safari opens it.
3. **Android:** Files app → Downloads → tap the file → open with Chrome. Then : → **Add to Home screen** and it behaves like any other app.
4. **iPhone / iPad:** Files app → tap the file → Safari. Then Share → **Add to Home Screen**.
5. No internet needed, ever. No account, no licence key, no setup wizard.

Keeping your data safe

Your leads, your customers and every note you have logged live in your own browser on your own device — nowhere else, and never on anybody's server. That means nobody can see them, and also that clearing your browser's site data would erase them. So: **Backup & Health** → **Export JSON**, once a week. To move to another device, take the file and the backup with you and use **Import JSON**.

Backup & Health — your data controls, and the live test results below them.

What it will not do

- ▶ It does not send emails or WhatsApp messages. It tells you who to contact and why; you contact them.
- ▶ It has no user accounts, so it does not track which salesperson owns which deal. That arrives with the hosted version.
- ▶ In this single-file form it does not pull live from Myntra, Flipkart or BUSY; the hosted version of Medhava is what connects those pipes.
- ▶ It will not stop you putting a silly value on a deal. It checks its own arithmetic, not your judgement.

Accepted when: the app opens by double-click with no internet · all 38 self-tests show pass · a lead can be added, moved on, won and lost · winning a lead creates the customer immediately · a segment filter changes the list · a note logs against one customer and nobody else · a backup exports and imports cleanly.
