# B2B & Credit

Tier pricing, a real credit limit, and ageing against each buyer's own terms

Module 03 · Sales — App 2 of 5

The buy-in-bulk side of selling. Every buyer sits on a tier, and the tier decides the rate — nobody types a price, so the price list cannot quietly fall apart. Every buyer has a credit limit, and the check on it is a gate rather than a warning: an order that would take a buyer over their limit goes on hold instead of being approved. It is not lost, and it is not silently allowe...

35 / 35 self-tests pass

Over the limit, nothing ships

# What this is, and what is inside

The buy-in-bulk side of selling, and two rules that decide whether it makes money or quietly loses it.

**The price is the tier, not a negotiation.** Every buyer sits on a tier, and the tier decides the discount off your list price. Nobody types a rate, so the price list cannot fall apart one "just this once" at a time.

**The credit check is a gate, not a warning.** An order that would take a buyer over their limit goes **on hold**. It is not lost, and it is not silently approved either — somebody has to collect money or raise the limit on purpose.

Ageing is measured against **each buyer's own agreed terms**, so a 45-day buyer is never called late on day 31 and a 15-day buyer is not given 30 days by accident. Most software uses one fixed number for everybody and gets both wrong.

And a buyer with plenty of headroom left but a 90-day-old invoice is **still stopped**. Headroom on its own is a half-answer.

## What this document covers

1. What this is, and what is inside
2. Where B2B & Credit sits
3. The process, end to end
4. Screen · Overview
5. Screen · Orders
6. The credit gate, refusing an order
7. Screen · Credit limits
8. Raising a limit, deliberately
9. Screen · Ageing
10. Screen · Wiring
11. Why a gate, and not a warning
12. Every figure, and how it is worked out
13. Connectors — nothing is locked to one company
14. The three rules the app enforces on itself
15. What this app can be wired to
16. The 35 self-tests, in full (1 of 2)
17. The 35 self-tests, in full (2 of 2)
18. How to run it, and what it will not do

# Where B2B & Credit sits

Every Medhava app stands on **one shared Data Core**: Item/SKU, Party, Stock, Ledger/Voucher and Order.

## What it reads, and from where

| COMES FROM | WHAT IT SUPPLIES                                  |
|------------|---------------------------------------------------|
| Catalog    | The list price every tier rate is worked out from |
| CRM        | Who the buyer is and their trading history        |
| Inventory  | Whether there is stock to dispatch                |
| Accounting | Whether the invoice was actually settled          |
| Logistics  | The dispatch and the delivery proof               |

**What this app owns:** the wholesale order, the tier rate applied to it, and the credit decision. **What it only reads:** the list price, the stock and whether the money arrived.

# The process, end to end

---

*The gate is the second step. Everything after it is money at risk.*

- 1 An order is raised.** Its value comes from the buyer's tier rate — you never type a price.
- 2 The credit check runs.** The order is added to what that buyer already owes. Inside the limit it becomes a draft; outside it, it goes on hold immediately.
- 3 Approved.** The check runs again at this moment, because something may have shipped in between.
- 4 Dispatched.** Stock leaves. From here it is real money at risk, not a plan.
- 5 Invoiced.** It posts to the books and starts ageing — against *their* terms, not a fixed 30 days.
- 6 Paid.** Exposure falls and their headroom for the next order returns.

| WO-712<br>2026-05-30 | Metro Distributors<br>tier A - 30-day terms       | Premium product<br>35 × ₹2,992.00      | 1,19,000.00 | 1,04,720.00 | 14,280.00   | Paid       | settled           |

Raise an order at the top; the buyer dropdown shows how much credit each one has left.

List price, tier price and what you gave up sit side by side on every row. The cost of the discount is never invisible — which is the only way the tier system stays honest over a year.

How the check works

1

You raise an order. Its value is worked out from the buyer's tier rate.

2

The app adds it to what that buyer already owes — everything approved and not yet paid.

3

If the total stays inside the limit, the order is approved.

4

If it does not, the order goes on hold. It is not lost, and it is not silently approved either.

5

Collect a payment, or raise the limit on purpose, and press Try again.

Northline Retail Pvt Ltd's limit is now ₹11,50,000.00

The headroom changed the moment the limit did.

Raising a limit is a real decision — it is money you are choosing to risk — so it is done on its own screen, in its own form, rather than as a checkbox on an order. The Overview flags anybody who then goes over.

What each bucket means for what you do next

| BUCKET       | WHAT IT MEANS                               | WHAT TO DO                                                  |
|--------------|---------------------------------------------|-------------------------------------------------------------|
| Not yet due  | Inside the terms you agreed with that buyer | Nothing. Do not chase — you agreed to this.                 |
| 1–30 days    | Slipping                                    | One call. Usually a paperwork problem, not a money problem. |
| 31–60 days   | A pattern, not an accident                  | Stop extending. Ask for a date in writing.                  |
| 61–90 days   | The money is at real risk                   | No new dispatches to that buyer.                            |
| Over 90 days | Assume you will have to fight for it        | Stop supply. Escalate formally.                             |

Northline Retail Pvt Ltd's limit is now ₹11,50,000.00

Every unpaid invoice, oldest against its own terms first, with what to do about each.

## What each bucket means for what you do next

| BUCKET       | WHAT IT MEANS                        | WHAT TO DO                                  |
|--------------|--------------------------------------|---------------------------------------------|
| Not yet due  | Inside the terms you agreed          | Nothing. Do not chase — you agreed to this. |
| 1–30 days    | Slipping                             | One call. Usually paperwork, not money.     |
| 31–60 days   | A pattern, not an accident           | Stop extending. Get a date in writing.      |
| 61–90 days   | The money is at real risk            | No new dispatches to that buyer.            |
| Over 90 days | Assume you will have to fight for it | Stop supply. Escalate formally.             |

# Screen · Wiring

*Every figure, its source, and one wholesale order followed end to end.*

# Why a gate, and not a warning

---

- 1 A warning gets clicked through.** On a busy afternoon, with a buyer on the phone, every warning looks like a formality. A gate does not.
- 2 Nothing is lost.** The order goes on hold and waits. Collect something, or raise the limit deliberately, and press **Try** again.
- 3 The decision becomes visible.** Raising a limit is a recorded act — you chose to risk more money — instead of an approval nobody remembers giving.
- 4 Almost every wholesale bad debt starts with one order approved "just this once".** This is the app refusing to be the place that happens.

**The verdict column on the Credit screen looks at both risks.** Over limit, 90+ days late, badly late, late, nearly full, room to sell — in that order of seriousness. A buyer is only called "room to sell" when nothing is late *and* there is headroom.

# Every figure, and how it is worked out

This is the same table as the Wiring screen, so you have it on paper.

| FIGURE                  | COMES FROM                | HOW IT IS WORKED OUT                                                |
|-------------------------|---------------------------|---------------------------------------------------------------------|
| Order value             | This app + the price list | Quantity × the buyer's tier rate. The rate is never typed in.       |
| What you gave up        | Tier rules                | List price minus tier price, so the cost of the discount is visible |
| Exposure (owes you now) | This app                  | Every order approved or later, and not yet paid, added up per buyer |
| Headroom left           | This app                  | The buyer's credit limit minus their exposure                       |
| Credit decision         | This app                  | Order value must fit inside the headroom, or the order goes on hold |
| Invoiced, unpaid        | Accounts Receivable       | Every invoice raised and not yet settled                            |
| Past terms by           | This app + buyer master   | Days since the invoice, minus that buyer's own agreed terms         |
| Ageing buckets          | All of the above          | Not yet due · 1–30 · 31–60 · 61–90 · over 90, by days past terms    |
| Stock movement          | Inventory                 | Leaves on dispatch, not on approval                                 |
| Ledger entry            | Accounting                | Posted when the invoice is raised, cleared when it is paid          |

Every figure is rounded to two decimal places at the moment it is calculated, so a total can never disagree with the rows above it by a stray paisa.

# Connectors — nothing is locked to one company

This is the promise, and the app checks it on itself every time it opens: **no Medhava app depends on any single outside service.** Not one accounting package, not one marketplace, not one AI company, not one automation tool, not one courier.

"Outside services required: 0" is not a marketing line — it is one of this app's self-tests.

# The three rules the app enforces on itself

- 1 No capability has only one choice.** Every one has at least three; most have eight to twelve.
- 2 Every capability has a built-in or by-hand option** — so the app is fully usable with **nothing connected at all**. No account anywhere, no internet, no subscription. That is how it ships, and it is the default it starts on.
- 3 Every capability has an option you can host yourself** — so you are never forced to send your business data to somebody else's cloud, whatever the fashion of the day is.

All three appear as ordinary self-tests on the **Backup & Health** screen, in plain English, alongside the rest — so you can confirm them yourself in five seconds.

**Switching a provider never changes a figure.** The arithmetic lives in Medhava, not in the service. Move from one courier to another and every past shipping record stays exactly as it was — only new labels come from somewhere else. There is a self-test for exactly this: *"switching a provider changes nothing else in your data"*.

## What the four tags on the screen mean

| TAG         | WHAT IT MEANS FOR YOU                                                          |
|-------------|--------------------------------------------------------------------------------|
| built in    | Ships inside Medhava. Needs nothing, costs nothing, works offline.             |
| you host it | You run it on your own machine or server. Your data never leaves your control. |
| their cloud | Somebody else's service, connected with a scoped, revocable key.               |
| by hand     | A person does it, or a CSV goes in and out. Always available.                  |

**Why this rule exists at all.** Software that can only work with one outside company is not a tool you own — it is a bet on somebody else staying cheap, staying available and staying in business. Every capability here has a way out, including a way that needs nobody.

# What this app can be wired to

B2B & Credit uses **7** capabilities and offers **74** alternatives across them. Every one is a button on the Connectors screen — click it and you have switched.

| CAPABILITY                     | THE OPTIONS, IN FULL                                                                                                                            |
|--------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Books &amp; ledger</b>      | Medhava Books (built in) · Tally · BUSY · Marg · Zoho Books · QuickBooks · ERPNext (self-hosted) · CSV to your CA                               |
| <b>Customer messaging</b>      | Copy and send it yourself · WhatsApp Cloud API · Gupshup · Interakt · MSG91 · Twilio · email instead · Chatwoot (self-hosted)                   |
| <b>Email sending</b>           | Download and send it yourself · any SMTP server · Amazon SES · SendGrid · Postmark · Mailgun · Zoho Mail · Brevo                                |
| <b>Shipping &amp; couriers</b> | Type the AWB in · your own delivery · Delhivery · Blue Dart · DTDC · Ecom · XpressBees · India Post · Shiprocket · NimbusPost                   |
| <b>Printing</b>                | Browser print / PDF · any ESC/POS thermal printer · Zebra · TVS · no printer at all                                                             |
| <b>Files &amp; backups</b>     | This device · a USB drive · MinIO or Nextcloud (self-hosted) · Google Drive · Dropbox · OneDrive · Amazon S3 · Backblaze B2                     |
| <b>Automation</b>              | Medhava Rules (built in) · n8n · Node-RED · Windmill · Airflow (self-hosted) · n8n Cloud · Make · Zapier · Pipedream · cron + webhook · by hand |

**Cloud services use a scoped, revocable key — never your password.** A key can be limited to only what it needs and cancelled in one click from the service's own side, without touching your login. **Medhava will never ask you for a marketplace, bank or account password.** If any screen ever does, it is not Medhava.

## What if the tool you use is not on the list?

Then it becomes one more button. A provider is a small adapter — read from there, write to there — and the app around it does not change, because the arithmetic never lived in the provider. Adding one does not touch a single figure, a single screen or a single self-test.

| WHEN A PROVIDER IS ADDED OR SWAPPED | WHAT HAPPENS                                                                |
|-------------------------------------|-----------------------------------------------------------------------------|
| Your existing records               | Untouched. Nothing is migrated, because nothing was stored in the provider. |
| Every figure on every screen        | Identical — there is a self-test that proves this.                          |
| Your saved work and settings        | Untouched.                                                                  |
| The self-tests                      | Same list, same names, still passing.                                       |
| What you have to relearn            | Nothing. The screens do not change.                                         |

**The practical version of the promise:** if a service you use doubles its price, changes its terms, or shuts down, you click a different button. You do not change software, you do not re-enter data, and you do not lose a day.

# The 35 self-tests, in full (1 of 2)

These run every time the app opens, **before** anything is shown. Menu → **Backup & Health** to see them live. They are written in plain language on purpose — you should be able to read what was checked.

| RESULT | WHAT WAS CHECKED                                                |
|--------|-----------------------------------------------------------------|
| ✓ pass | every tier discount is between 0 and 50%                        |
| ✓ pass | a tier rate = list price less that tier's discount              |
| ✓ pass | an order is valued at the buyer's tier rate, never a typed one  |
| ✓ pass | what you gave up = list price – tier price                      |
| ✓ pass | a tier discount never makes a price negative                    |
| ✓ pass | every live order sits in a real stage                           |
| ✓ pass | an order on hold is in no stage                                 |
| ✓ pass | the order book counts everything not yet paid                   |
| ✓ pass | exposure counts only what is approved and not yet paid          |
| ✓ pass | a draft order is not counted against credit yet                 |
| ✓ pass | headroom = limit – exposure                                     |
| ✓ pass | total exposure is the sum of every buyer's exposure             |
| ✓ pass | a paid order stops using up credit                              |
| ✓ pass | an order that would break the limit is refused, not approved    |
| ✓ pass | nobody is over their limit in the seeded data, or it is flagged |
| ✓ pass | only invoiced-and-unpaid money has an age                       |
| ✓ pass | the ageing buckets add up to everything unpaid                  |
| ✓ pass | the ageing buckets count every unpaid invoice once              |

## The 35 self-tests, in full (2 of 2)

Continued. The last group are the **Connectors** checks — the ones that keep the no-lock-in promise honest.

| RESULT | WHAT WAS CHECKED                                                               |
|--------|--------------------------------------------------------------------------------|
| ✓ pass | age is measured against each buyer's own terms                                 |
| ✓ pass | an invoice inside its terms is never called late                               |
| ✓ pass | past-terms money is never more than all unpaid money                           |
| ✓ pass | every buyer appears once on the credit screen                                  |
| ✓ pass | every buyer has a limit and agreed terms                                       |
| ✓ pass | every buyer is on a tier that exists                                           |
| ✓ pass | a buyer with room left but a 90-day-old invoice is still stopped               |
| ✓ pass | a buyer is only called "room to sell" if nothing is late and there is headroom |
| ✓ pass | every capability this app uses is a known one                                  |
| ✓ pass | no capability offers only one choice                                           |
| ✓ pass | every capability works with nothing connected (built-in or by hand)            |
| ✓ pass | every capability has an option you can host yourself                           |
| ✓ pass | exactly one provider is active per capability                                  |
| ✓ pass | the default provider never needs an outside service                            |
| ✓ pass | no single company is unavoidable across capabilities                           |
| ✓ pass | switching a provider changes which one is active                               |
| ✓ pass | switching a provider changes nothing else in your data                         |

**If you ever see a red "fail", stop trusting the numbers on screen.** Take a backup, reload the file, and report which line failed. Software that tells you when it is broken is worth more than software that is quietly wrong.

# How to run it, and what it will not do

## Running it

1. **Windows:** extract the ZIP, then double-click `B2B_Credit.html`. It opens in your browser. That is the whole installation.
2. **Mac:** unpack the ZIP, double-click the file. Safari opens it.
3. **Android:** Files app → Downloads → tap the file → open with Chrome. Then ⋮ → **Add to Home screen**.
4. **iPhone / iPad:** Files app → tap the file → Safari. Then Share → **Add to Home Screen**.
5. No internet needed, ever. No account, no licence key, no setup wizard.

## Keeping your data safe

Everything you enter lives in your own browser on your own device — nowhere else, and never on anybody's server. That means nobody can see it, and also that clearing your browser's site data would erase it. So: **Backup & Health** → **Export JSON**, once a week. To move to another device, take the file and the backup with you and use **Import JSON**.

*Backup & Health — your data controls, and the live test results below them.*

## What it will not do

- ▶ It does not decide the limit for you — that is a commercial judgement, and it is recorded as one.
- ▶ It does not chase the money itself; it tells you who to chase and how late they are.
- ▶ It has no credit-bureau lookup. The limit is what you set.
- ▶ In this single-file form nothing is connected live to your books — see the Connectors screen for every option.

**Accepted when: the app opens by double-click with no internet · all 35 self-tests show pass · an over-limit order goes on hold rather than being approved · a within-limit order goes through · raising a limit changes the headroom · ageing counts against each buyer's own terms · a backup exports and imports cleanly.**
