35 / 35 self-tests pass

A COD order cannot be packed unpaid

What this is, and what is inside

Every order from your own storefront in one pipeline: **New** → **Confirmed** → **Packed** → **Shipped** → **Delivered**. Four rules do the work, and each one saves real money.

A coupon below its minimum order value is ignored, not quietly applied. The table shows it greyed and marked "below minimum", so nobody wonders why the bill did not drop.

A cash-on-delivery order cannot be packed without a 20% advance. A refused COD parcel costs the courier fee both ways and the goods come back handled; a customer who has paid something almost always accepts it.

Loyalty points are earned on delivery, never on order. So "points owed" is a real liability rather than a hopeful guess.

Every abandoned cart is listed with its age. A cart left three days ago is the cheapest sale in the business to win back, and almost nobody chases it.

The stock this app draws on is the **same single number** the marketplaces, the counter and the wholesale order book all read. There is no per-channel copy to reconcile later.

17. The 35 self-tests, in full (2 of 2)
18. How to run it, and what it will not do

Where D2C Sales sits

Every Medhava app stands on **one shared Data Core**: Item/SKU, Party, Stock, Ledger/Voucher and Order.

What it reads, and from where

COMES FROM	WHAT IT SUPPLIES
Catalog	The item, its name and its selling price
Inventory	Whether there is stock to promise
Payments	Whether the money actually arrived
Logistics	The courier, the AWB and the delivery outcome
CRM	Who the customer is, and what they have bought before

What this app owns: the order, its stage, the coupon applied, the COD advance, the abandoned cart and the points balance. **What it only reads:** the price, the stock position and the customer.

The process, end to end

Six steps. The COD rule sits between the third and the fourth.

- 1 An order is placed.** The price comes from the Catalog; a coupon is applied only if the order reaches its minimum.
- 2 Stock is reserved** against the one shared number. Cancel it and the reservation is released.
- 3 Packed.** If it is COD, the 20% advance is checked here. Too little and the app refuses, naming the figure it needs.
- 4 Shipped.** Seven days in transit and it appears on the Overview as something to chase.
- 5 Delivered.** The balance is collected, the sale posts to the books, and **only now** are loyalty points earned.
- 6 CRM picks the customer up** — their worth, their order count, their segment. Nothing is typed twice.

Four rules, and what each one is worth

- ▶ **Coupons respect their minimum.** Below it, the code does nothing and says so. A discount that applies when it should not is a leak nobody audits.
- ▶ **COD needs 20% up front before packing.** The single cheapest defence against refused deliveries there is.
- ▶ **Points are earned on delivery.** An order in transit or cancelled earns nothing, so the liability on screen is always real.
- ▶ **Nothing is ever deleted.** A cancelled order leaves every total but stays in the record, and a delivered order cannot be cancelled at all.

All four are self-tests. If any of them stops being true, the app tells you on the **Backup & Health** screen the next time it opens.

Screen - Overview

Five cards, where the orders are, and what needs a look.

Reading it in twenty seconds

- 1 **Collected** versus **Still to collect** — how much of today's selling is actually money.
- 2 **The COD share.** It turns red above 50%, because every COD parcel carries refusal risk.
- 3 **Needs a look.** Rule breaches and stuck parcels, each with a button that takes you there.

ORDER	CUSTOMER	WAS WORTH
SO-508	Rohit Verma	4,999.00 cancelled

Cancelled orders leave every total but stay in the record. Nothing is ever deleted.

The order stayed at Confirmed. The app named the advance it needed.

This is the whole point of a gate rather than a warning. A warning gets clicked through on a busy afternoon and the parcel goes out anyway. Here the stage simply does not change until somebody collects the advance — or decides, deliberately, to raise it.

CUSTOMER	WHAT THEY LEFT	VALUE	LEFT		
Priya Kulkarni	Premium product	4,999.00	3 days ago	worth a nudge	They bought it .. Give up
Amit Ranjan	Standard product	1,799.00	12 days ago	probably gone	They bought it .. Give up
Nisha Gupta	Top-of-range product	12,999.00	6 days ago	worth a nudge	They bought it .. Give up

Why seven days

A cart abandoned in the last week is still warm — the person remembers what they wanted and why. After a week the reason has usually gone, and chasing it costs more than it returns. Pressing **They bought it** creates a real order at the New stage — it appears on the Orders screen immediately, and the cart is marked recovered.

COD needs a 20% advance — ₹179.80 on this order

Everything left behind, with its age and whether it is still worth a nudge.

Where every figure comes from

D2C Sales owns the order. Stock, money and the customer record all move because of what happens here.

Shared Data Core: Item/SKU · Party · Stock · Ledger/Voucher · Order — every module reads and writes these.

Every figure here, and its source

FIGURE HERE	COMES FROM	HOW IT IS WORKED OUT
Net sales	This app (it owns the order)	Every live order: quantity × rate, minus any coupon that actually qualified
Coupon discount	Coupon rules in this app	Percentage of gross — but only if gross reaches the code's minimum order value
Collected	Payments	Prepaid orders in full, plus the advance taken on each COD order
Still to collect	Payments + courier	For COD orders only: net minus the advance already taken
Stage of an order	This app	Moves one step at a time; a COD order is blocked at packing without its 20% advance
Stock movement	Inventory	Reserved when the order is confirmed, released when it is cancelled
Loyalty points	This app	2% of net, earned only when the order reaches Delivered
Points owed	This app	Everything earned minus everything redeemed — a real liability, not a guess
Abandoned carts	This app (your storefront)	Carts with no order against them, aged in days
Customer record	CRM	This app writes the order; CRM reads it and works out the customer's worth

Live example — one order, six consequences

1

An order is placed on **your own website**.

2

-- **Stock** is reserved for that SKU. The same single stock number every other channel reads.

3

-- **Packed**: a COD order is checked against the 20% advance rule first.

4

-- **Shipped**: the courier gets it. Seven days in transit and it appears on the Overview.

5

-- **Delivered**: the balance is collected, the sale posts to the **books**, and points are earned.

6

-- **CRM** picks the customer up: their worth, their order count, their segment.

What this app owns, and what it only reads

It owns: the order, its stage, the coupon applied, the COD advance, the abandoned cart, and the points balance.

It reads: the item and its price from the Catalog, the stock position from Inventory, the customer from CRM.

Which is why an order here can never disagree with the CEO Dashboard: there is one order record, and both read it.

100 points redeemed for Ananya Rao

Every figure, its source, and one order followed through its six consequences.

Every figure, and how it is worked out

This is the same table as the Wiring screen, so you have it on paper.

FIGURE	COMES FROM	HOW IT IS WORKED OUT
Net sales	This app (it owns the order)	Every live order: quantity × rate, minus any coupon that actually qualified
Coupon discount	Coupon rules in this app	Percentage of gross — but only if gross reaches the code's minimum order value
Collected	Payments	Prepaid orders in full, plus the advance taken on each COD order
Still to collect	Payments + courier	For COD orders only: net minus the advance already taken
Stage of an order	This app	Moves one step at a time; a COD order is blocked at packing without its 20% advance
Stock movement	Inventory	Reserved when the order is confirmed, released when it is cancelled
Loyalty points	This app	2% of net, earned only when the order reaches Delivered
Points owed	This app	Everything earned minus everything redeemed — a real liability, not a guess
Abandoned carts	This app (your storefront)	Carts with no order against them, aged in days
Customer record	CRM	This app writes the order; CRM reads it and works out the customer's worth

Every figure is rounded to two decimal places at the moment it is calculated, so a total can never disagree with the rows above it by a stray paisa.

Connectors — nothing is locked to one company

This is the promise, and the app checks it on itself every time it opens: **no Medhava app depends on any single outside service.** Not one accounting package, not one marketplace, not one AI company, not one automation tool, not one courier.

"Outside services required: 0" is not a marketing line — it is one of this app's self-tests.

The three rules the app enforces on itself

- 1 **No capability has only one choice.** Every one has at least three; most have eight to twelve.
- 2 **Every capability has a built-in or by-hand option** — so the app is fully usable with **nothing connected at all**. No account anywhere, no internet, no subscription. That is how it ships, and it is the default it starts on.
- 3 **Every capability has an option you can host yourself** — so you are never forced to send your business data to somebody else's cloud, whatever the fashion of the day is.

All three appear as ordinary self-tests on the **Backup & Health** screen, in plain English, alongside the rest — so you can confirm them yourself in five seconds.

Switching a provider never changes a figure. The arithmetic lives in Medhava, not in the service. Move from one courier to another and every past shipping record stays exactly as it was — only new labels come from somewhere else. There is a self-test for exactly this: *"switching a provider changes nothing else in your data"*.

What the four tags on the screen mean

TAG	WHAT IT MEANS FOR YOU
built in	Ships inside Medhava. Needs nothing, costs nothing, works offline.
you host it	You run it on your own machine or server. Your data never leaves your control.
their cloud	Somebody else's service, connected with a scoped, revocable key.
by hand	A person does it, or a CSV goes in and out. Always available.

Why this rule exists at all. Software that can only work with one outside company is not a tool you own — it is a bet on somebody else staying cheap, staying available and staying in business. Every capability here has a way out, including a way that needs nobody.

What this app can be wired to

D2C Sales uses **7** capabilities and offers **71** alternatives across them. Every one is a button on the Connectors screen — click it and you have switched.

CAPABILITY	THE OPTIONS, IN FULL
Sales channels	Type them in · CSV import · Amazon · Flipkart · Myntra · Meesho · Ajio · Nykaa · JioMart · the storefront platform · a self-hosted storefront platform · your own store
Payments	Cash · UPI direct with your own QR (no commission) · Razorpay · PayU · Cashfree · PhonePe · Paytm · Stripe · CCAvenue
Customer messaging	Copy and send it yourself · WhatsApp Cloud API · Gupshup · Interakt · MSG91 · Twilio · email instead · Chatwoot (self-hosted)
Shipping & couriers	Type the AWB in · your own delivery · Delhivery · Blue Dart · DTDC · Ecom · XpressBees · India Post · Shiprocket · NimbusPost
Books & ledger	Medhava Books (built in) · any established desktop accounting package · an open-source ERP (self-hosted) · CSV to your CA
Printing	Browser print / PDF · any ESC/POS thermal printer · Zebra · TVS · no printer at all
Files & backups	This device · a USB drive · MinIO or Nextcloud (self-hosted) · Google Drive · Dropbox · OneDrive · Amazon S3 · Backblaze B2

Cloud services use a scoped, revocable key — never your password. A key can be limited to only what it needs and cancelled in one click from the service's own side, without touching your login. **Medhava will never ask you for a marketplace, bank or account password.** If any screen ever does, it is not Medhava.

What if the tool you use is not on the list?

Then it becomes one more button. A provider is a small adapter — read from there, write to there — and the app around it does not change, because the arithmetic never lived in the provider. Adding one does not touch a single figure, a single screen or a single self-test.

WHEN A PROVIDER IS ADDED OR SWAPPED	WHAT HAPPENS
Your existing records	Untouched. Nothing is migrated, because nothing was stored in the provider.
Every figure on every screen	Identical — there is a self-test that proves this.
Your saved work and settings	Untouched.
The self-tests	Same list, same names, still passing.
What you have to relearn	Nothing. The screens do not change.

The practical version of the promise: if a service you use doubles its price, changes its terms, or shuts down, you click a different button. You do not change software, you do not re-enter data, and you do not lose a day.

The 35 self-tests, in full (1 of 2)

These run every time the app opens, **before** anything is shown. Menu → **Backup & Health** to see them live. They are written in plain language on purpose — you should be able to read what was checked.

RESULT	WHAT WAS CHECKED
✓ pass	$\text{gross} = \text{quantity} \times \text{rate}$
✓ pass	$\text{net} = \text{gross} - \text{coupon}$
✓ pass	a coupon below its minimum order value is ignored
✓ pass	a coupon at or above its minimum is applied
✓ pass	only COD orders have money left to collect
✓ pass	$\text{COD due} = \text{net} - \text{advance}$, never below zero
✓ pass	$\text{collected} + \text{still to collect} = \text{net sales}$
✓ pass	every live order sits in a real stage
✓ pass	the funnel counts add up to every live order
✓ pass	the funnel values add up to net sales
✓ pass	a cancelled order is in no total
✓ pass	$\text{average order value} = \text{net sales} \div \text{live orders}$
✓ pass	moving an order on advances it exactly one stage
✓ pass	no COD order got past packing without its 20% advance
✓ pass	points are earned only on delivered orders
✓ pass	$\text{points on a delivered order} = 2\% \text{ of its net}$
✓ pass	a points balance is earned minus used
✓ pass	nobody has spent points they never earned

The 35 self-tests, in full (2 of 2)

Continued. The last group are the **Connectors** checks — the ones that keep the no-lock-in promise honest.

RESULT	WHAT WAS CHECKED
✓ pass	points owed is the sum of every balance
✓ pass	an abandoned cart is only counted while it is still open
✓ pass	cart value is the sum of the open carts
✓ pass	only carts under 7 days old are called worth a nudge
✓ pass	recovering a cart creates one new order
✓ pass	a recovered cart leaves the open list
✓ pass	every customer appears once in the list
✓ pass	customer spend adds up to net sales
✓ pass	every capability this app uses is a known one
✓ pass	no capability offers only one choice
✓ pass	every capability works with nothing connected (built-in or by hand)
✓ pass	every capability has an option you can host yourself
✓ pass	exactly one provider is active per capability
✓ pass	the default provider never needs an outside service
✓ pass	no single company is unavoidable across capabilities
✓ pass	switching a provider changes which one is active
✓ pass	switching a provider changes nothing else in your data

If you ever see a red "fail", stop trusting the numbers on screen. Take a backup, reload the file, and report which line failed. Software that tells you when it is broken is worth more than software that is quietly wrong.

How to run it, and what it will not do

Running it

1. **Windows:** extract the ZIP, then double-click `D2C_Sales.html`. It opens in your browser. That is the whole installation.
2. **Mac:** unpack the ZIP, double-click the file. Safari opens it.
3. **Android:** Files app → Downloads → tap the file → open with Chrome. Then ⋮ → **Add to Home screen**.
4. **iPhone / iPad:** Files app → tap the file → Safari. Then Share → **Add to Home Screen**.
5. No internet needed, ever. No account, no licence key, no setup wizard.

Keeping your data safe

Everything you enter lives in your own browser on your own device — nowhere else, and never on anybody's server. That means nobody can see it, and also that clearing your browser's site data would erase it. So: **Backup & Health** → **Export JSON**, once a week. To move to another device, take the file and the backup with you and use **Import JSON**.

Backup & Health — your data controls, and the live test results below them.

What it will not do

- ▶ It does not send the WhatsApp or email itself — it tells you who to contact and why.
- ▶ It does not price dynamically; the Catalog price is the price.
- ▶ In this single-file form nothing is connected live to a storefront — the Connectors screen shows every service it can be wired to.
- ▶ It will not stop you taking an order you cannot fulfil. It checks its own arithmetic, not your judgement.

Accepted when: the app opens by double-click with no internet · all 35 self-tests show pass · a coupon below its minimum is visibly ignored · a COD order is refused at packing without its advance · recovering a cart creates a real order · points appear only on delivery · a backup exports and imports cleanly.
