

UNIFIED ERP — ANY INDUSTRY

# CRM & Customer 360

Lead → won → the whole lifetime, in one record

Module 02 · CRM — App 1 of 1

One record per customer, carrying everything. Before they buy it is a pipeline with honest odds at every stage; after they buy it is every order, every return, what they are actually worth, and what to offer them next.

One file · opens by double-click

Works offline

29 / 29 self-tests pass

Win a deal, the customer appears

# What this is, and what is inside

This app does **two jobs that most software splits into two products** — and it does them in one record, so nobody is ever typed in twice.

## Before they buy — a LEAD

They sit in a pipeline, moving from New to Contacted to Quoted to Negotiation. Every stage carries a real probability of closing, so the forecast is honest instead of hopeful.

## After they buy — a CUSTOMER

Every order, everything sent back, what they are actually worth once returns come off, how long since you last heard from them, and which of six behaviour groups they are in.

Mark a deal **Won** and the customer appears on the Customers screen immediately. There is no export, no re-keying, and no gap where somebody gets forgotten.

**What it never does:** touch your orders, invoices, stock or ledger. Worth, returns and last-order date are **read** from the Sales module — never typed in here. That is why the customer value on this screen cannot disagree with what the Sales module says. There is only one copy of it.

## What this document covers

1. What this is, and what is inside
2. Where CRM sits — the wiring
3. The process — a lead becomes a customer
4. Screen · Overview
5. Why "likely to close" is the number to trust
6. Screen · Pipeline — where you actually work
7. Adding a lead, and what is refused
8. Moving a deal on — one stage at a time
9. Winning a deal — the customer appears
10. Losing a deal, and why that is worth recording
11. Screen · Customers
12. Filtering to one group
13. Screen · Customer 360
14. The conversation log — the one thing only you know
15. Screen · Segments & offers
16. Every figure and how it is worked out
17. The 29 self-tests, in full
18. How to run it, and what it will not do

# Where CRM sits

Every Medhava app stands on **one shared Data Core**: Item/SKU, Party, Stock, Ledger/Voucher and Order. CRM owns the lead and the conversation. Everything about money and orders it reads.

## What it reads, and from where

| COMES FROM             | WHAT IT SUPPLIES                                    |
|------------------------|-----------------------------------------------------|
| Sales & Orders         | Every order, its channel, and anything returned     |
| Accounting             | Whether the customer actually paid, and how late    |
| Catalog                | What they bought, so the next offer makes sense     |
| Marketing / Automation | Which campaign the lead arrived from                |
| CEO Dashboard          | Reads customer value and the at-risk count back out |

**Two things CRM owns outright.** The **lead** — its stage, its value, why it was lost — and the **conversation log**. Nothing else in the business records what was said on a call or promised at an exhibition, which is why those two are the only things in this app that are typed in by hand.

# The process — a lead becomes a customer

Five steps. Only the first three need a human; the last two happen on their own.

- 1 A lead arrives.** Somebody fills in your website form, a customer refers a friend, you meet a buyer at a trade show, or you make a cold call. You type the name, the company, where it came from, and your honest estimate of the value. It lands at **New**.
- 2 You move it on.** One stage at a time — New → Contacted → Quoted → Negotiation. It never skips and never goes backwards. The **weighted pipeline** changes the moment you press the button, because the odds changed.
- 3 Won or lost.** Won creates the customer **right then**. Lost records a reason and leaves the pipeline — but stays in the record, because lost deals are what your win rate and your "where deals are lost" table are made of.
- 4 Their orders appear by themselves.** Their first order is recorded in Sales — by whoever normally records orders — and it appears on their Customer 360 by itself. Nobody enters an order in CRM. Their worth, their returns and their average order size all follow.
- 5 Their segment looks after itself.** Order four times in six weeks and they become a Champion. Go quiet for 90 days and they become At risk — and appear on the Overview under "who needs a call". Nobody tags anybody.

**The point of steps 4 and 5:** a CRM that needs somebody to remember to update it is out of date within a month. Nothing in this one has to be maintained.

## What is left for a human to do — exactly three things

| YOU DO                            | WHY ONLY YOU CAN                                                                                                 |
|-----------------------------------|------------------------------------------------------------------------------------------------------------------|
| Add a lead                        | Nothing else in the business knows an enquiry arrived.                                                           |
| Move it on, or mark it won / lost | Only you know whether a price is genuinely on the table.                                                         |
| Log what was said                 | A promise made on a call exists nowhere else. If it is not written down, it is gone the day you are unavailable. |

Three actions. Everything on all seven screens is worked out from those three and from what the rest of the business already records.

# Screen - Overview

Everything you are chasing on the left, everybody going quiet on the right, and why deals are lost at the bottom.

## Reading it in thirty seconds

- 1 Likely to close** — is there enough coming? Ignore the raw pipeline; this is the number to plan against.
- 2 Going cold** — if it is not zero, the panel on the right already names them, worst worth first, with a button that opens the record.
- 3 Where deals are being lost** — read this once a month, not once a day. One reason repeating is a decision to make, not luck.

# Why "likely to close" is the number to trust

A deal that arrived yesterday and a deal where you are arguing over the last 2% are both "open" — but they are not remotely the same thing. So every stage carries a probability:

| New                                                                                             | Contacted                             | Quoted                     | Negotiation      |
|-------------------------------------------------------------------------------------------------|---------------------------------------|----------------------------|------------------|
| 10%                                                                                             | 25%                                   | 50%                        | 75%              |
| just arrived,<br>nothing agreed                                                                 | you have spoken,<br>there is interest | a price is<br>on the table | down to<br>terms |
| The odds are fixed and visible. Nobody adjusts them per deal, so nobody can flatter a forecast. |                                       |                            |                  |

| A ₹10,00,000 DEAL...  | COUNTS AS | BECAUSE                     |
|-----------------------|-----------|-----------------------------|
| sitting at <b>New</b> | ₹1,00,000 | Nothing has been agreed yet |
| at <b>Contacted</b>   | ₹2,50,000 | There is real interest      |
| at <b>Quoted</b>      | ₹5,00,000 | A price is on the table     |
| at <b>Negotiation</b> | ₹7,50,000 | You are down to terms       |

**This is why the weighted figure is always smaller than the raw pipeline** — and why it is the one to plan cash against. A pipeline of ₹25,00,000 that weights down to roughly half of that is not bad news; it is the truth arriving earlier than it otherwise would.

## The other four cards

### Open pipeline

Every live deal added up. The optimistic number — useful only next to the weighted one.

### Win rate

Deals won ÷ (won + lost). Needs lost deals to be recorded, which is why "Lost" matters.

### Customer value

What your existing customers are worth — orders minus returns. Never gross.

### Going cold

How many customers have not ordered in 90 days. Red the moment there is one.

7 / 19

# Adding a lead, and what is refused

Four boxes at the top of the Pipeline screen.

| BOX                    | WHAT TO PUT IN IT                                                                                                                             |
|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| Contact / buyer name   | The person you actually talk to. <b>Required.</b>                                                                                             |
| Company / firm         | The business, if there is one. A walk-in customer may not have one.                                                                           |
| Where did it come from | Website enquiry · Referral · Trade show · Cold outreach · Marketplace lead                                                                    |
| Deal value (₹)         | Your honest estimate. <b>Required, and must be above zero.</b> It does not have to be exact — the stage odds already account for uncertainty. |

|-----------------|-------------|--------------------------|
| Sanjay Kulkarni | 5,10,000.00 | Lead added to pipeline ✓ |
| Meera Joshi     | 3,35,000.00 | won                      |

Lost

| DEAL           | VALUE       | REASON               |
|----------------|-------------|----------------------|
| Arjun Pillai   | 2,90,000.00 | Price too high       |
| Neha Bansal    | 1,75,000.00 | Went to a competitor |
| Farhan Qureshi | 1,30,000.00 | Timing not right     |

A lead added. It appears at the New stage and the New card grows by its value.

A lead with no name, or no value, is refused. That is deliberate. A pipeline full of blank rows is worse than no pipeline at all — it produces a forecast nobody believes, and then nobody looks at the screen again.

# Moving a deal on — one stage at a time

Below, the same lead after one press of **Move on** → . It went from New to Contacted — never further, never backwards.

| Farhan Qureshi | 1,30,000.00 | Timing not right     |

One press, one stage. The odds went from 10% to 25%, so the weighted pipeline rose.

**Why it cannot skip a stage.** "Quoted" means a price is genuinely on the table. If the button let you jump straight there from New, the 50% odds would stop meaning anything, and the weighted pipeline — the only number worth planning against — would quietly become fiction.

**Deals in Negotiation have no "Move on" button.** The only way out of the last stage is Won or Lost. There is nowhere else for a deal to go.

**Watch the Age column.** It turns red past 45 days. An old deal at an early stage is almost always a dead deal that nobody has admitted to yet — and it is inflating your pipeline while it sits there.

Won

₹12,10,000.00

| DEAL            | VALUE       |                          |
|-----------------|-------------|--------------------------|
| Sanjay Kulkarni | 5,10,000.00 | won                      |
| Meera Joshi     | 3,35,000.00 | won                      |
| Sanjana Rao     | 3,65,000.00 | Won — customer created ✓ |

Lost

| DEAL           | VALUE       | REASON               |
|----------------|-------------|----------------------|
| Arjun Pillai   | 2,90,000.00 | Price too high       |
| Neha Bansal    | 1,75,000.00 | Went to a competitor |
| Farhan Qureshi | 1,30,000.00 | Timing not right     |

Marked won. It leaves the open pipeline, joins the Won panel, and the win rate moves.

The important part is not on this screen. Pressing **Won** also created the customer. Go to the Customers screen and they are there — with a segment of "New", ready for their first order. You never re-type anybody, and nobody falls through the gap between "we won it" and "they are a customer".

Medhava · CRM & Customer 360 — Unified ERP — any industry

10 / 19

# Losing a deal, and why that is worth recording

Pressing **Lost** marks the deal lost and records **why**, based on how far it had got. The deal leaves the pipeline but stays in the record.

| LOST AT     | RECORDED REASON       |
|-------------|-----------------------|
| New         | Price too high        |
| Contacted   | Went to a competitor  |
| Quoted      | Timing not right      |
| Negotiation | Lost on payment terms |

## Why bother recording a loss at all?

- ▶ **Your win rate is meaningless without it.** Win rate is  $\text{won} \div (\text{won} + \text{lost})$ . Only record the wins and it is always 100%.
- ▶ **The "where deals are being lost" table on the Overview** is built entirely from these reasons. After three months it is the most useful table in the app.
- ▶ **One reason appearing over and over is not bad luck.** If "Price too high" keeps coming up, that is a pricing decision or a listing problem — something you can act on. Nobody notices a pattern they never wrote down.

**The temptation is to leave losses "open" so the pipeline looks bigger.** Do that and within two months the pipeline is mostly deals that died, the forecast is worthless, and the one table that would have told you why is empty.

## What happens to the numbers when you press Lost

| FIGURE                     | WHAT IT DOES                                                  |
|----------------------------|---------------------------------------------------------------|
| Open pipeline              | Falls by that deal's value — immediately.                     |
| Likely to close            | Falls by value $\times$ the odds of the stage it died at.     |
| Win rate                   | Falls, because the denominator grew. This is the honest part. |
| Where deals are being lost | Gains a row, or an existing row gains a deal and its value.   |
| The Lost panel             | Keeps the deal permanently, with its reason.                  |

**There is no "delete a deal" button anywhere in this app.** A deal is won or lost; it never disappears. That is what makes the win rate trustworthy — nobody can improve it by quietly removing the failures.

Marked lost

Everybody you have won — sorted by what they are actually worth, not by what they ordered.

The table is sorted by Worth, not Gross. A customer who orders a lot and returns a lot can easily be worth less than a quieter one who keeps what they buy. Sorting by gross hides that; sorting by worth shows it.

# Filtering to one group

The row of buttons filters the list to one behaviour group. Below, only the customers who have gone quiet.

LOG A CALL, A VISIT, A PROMISE MADE

Called about the April order — asked for 45-day terms

Add to the record

2026-07-31 - Note  
Agreed the festive indent on the call. Sending the rate sheet today.

2026-07-21 - Call  
Confirmed the July despatch arrived complete. Wants the same lead time next quarter.

2026-06-09 - Visit  
Met at their Mumbai office. Interested in the premium line if we can hold the price for six months.

Logged ✓

A note logged. It appears below with its date, newest first.

This is the only place in the app where you are the source of truth. Every other figure is read from somewhere else and can be recalculated. What was said on the call and what was promised at the exhibition exists nowhere but here — so if it is not written down, it is gone the day the person who took the call is unavailable.

The channel-mix panel above it is the other panel worth reading slowly. If one channel is responsible for most of a customer's returns while the others are clean, that is a channel problem — not a customer problem and not a product problem.

# Screen - Segments & offers

Six groups. Every customer is in exactly one. Nobody tags anybody by hand, and the groups recalculate themselves the moment somebody orders or goes quiet.

| GROUP           | A CUSTOMER LANDS HERE WHEN                      | WHAT IT MEANS                     |
|-----------------|-------------------------------------------------|-----------------------------------|
| Champion        | Bought 4+ times, and bought in the last 45 days | Your best. Hold on to them.       |
| Loyal           | Bought 2+ times, and bought in the last 60 days | Reliable. Grow the order size.    |
| Needs attention | Bought 2+ times, but quiet for 60–90 days       | Something changed. Find out what. |
| At risk         | Has not bought in 90 days                       | Call this week, not next month.   |
| Sleeping        | Has not bought in 180 days                      | One last try, then stop spending. |
| New             | Bought once, or not yet at all                  | Make the second order easy.       |

Customers - Segments

Segments & offers

Every customer falls into exactly one group, by the same rule, every time. No guessing, no manual tagging.

Segments are worked out from behaviour — how many times they bought and how long ago — not from anybody's opinion.

The rules, in plain words

| SEGMENT         | A CUSTOMER LANDS HERE WHEN                             | CUSTOMERS | WORTH        | SHARE OF VALUE |
|-----------------|--------------------------------------------------------|-----------|--------------|----------------|
| Champion        | Bought 4 or more times, and bought in the last 45 days | 2         | 11,02,600.00 |                |
| Loyal           | Bought 2 or more times, and bought in the last 60 days | 1         | 1,88,300.00  |                |
| Needs attention | Bought 2 or more times, but has been quiet 60–90 days  | 1         | 1,77,000.00  |                |
| At risk         | Has not bought in 90 days                              | 1         | 2,54,000.00  |                |
| Sleeping        | Has not bought in 180 days                             | 1         | 1,06,900.00  |                |
| New             | Bought once, or not yet at all                         | 3         | 39,500.00    |                |

What to say to each group

| SEGMENT         | CUSTOMERS | WHAT TO OFFER NEXT                                                                               |              |
|-----------------|-----------|--------------------------------------------------------------------------------------------------|--------------|
| Champion        | 2         | Give them first look at new lines and hold their price. Ask for a referral — they will give one. | See the 2 .. |
| Loyal           | 1         | Nudge the order size up. A small volume break costs less than finding a new customer.            | See the 1 .. |
| Needs attention | 1         | One phone call, not a discount. Find out what changed before assuming it is price.               | See the 1 .. |
| At risk         | 1         | Call within the week. Ask what went wrong on the last order — usually something did.             | See the 1 .. |
| Sleeping        | 1         | One clear win-back offer with a deadline. If it does not land, stop spending on them.            | See the 1 .. |
| New             | 3         | Make the second order easy. The gap between one order and two is where most customers are lost.  | See the 3 .. |

Why this matters

Most businesses treat every customer the same and then wonder why marketing money does nothing. These six groups are worked out from behaviour — how often somebody buys and how long ago — so the same effort goes where it will actually return something. A Champion needs holding on to; a Sleeping customer needs one last try and then letting go.

Change nothing and the segments still update themselves — the moment somebody orders, or stops ordering, they move group on their own.

Logged ✓

Each group with its rule, how many customers, what they are worth, and its share of your total customer value.

A Champion needs holding on to. A Sleeping customer needs one last try and then letting go. Treating them the same is how marketing budgets disappear without anybody being able to say what they bought.

# Every figure, and how it is worked out

This is the same table as the Wiring screen, so you have it on paper.

| FIGURE               | COMES FROM                       | HOW IT IS WORKED OUT                                                                                 |
|----------------------|----------------------------------|------------------------------------------------------------------------------------------------------|
| Open pipeline        | CRM itself (this app owns leads) | Every deal still open, added up                                                                      |
| Likely to close      | CRM + stage odds                 | Each deal $\times$ the probability of its stage: New 10%, Contacted 25%, Quoted 50%, Negotiation 75% |
| Win rate             | CRM                              | Deals won $\div$ (deals won + deals lost)                                                            |
| Customer worth       | Sales / Orders module            | Every order that customer placed, minus everything they sent back                                    |
| Returns and return % | Sales returns                    | Returned value $\div$ gross ordered value, per customer                                              |
| Average order value  | Sales / Orders                   | Customer worth $\div$ number of orders they placed                                                   |
| Last order date      | Sales / Orders                   | The newest order on that customer — this is what drives the segment                                  |
| Segment              | All of the above                 | One rule set on order count and days since last order — never tagged by hand                         |
| What to offer next   | Segment                          | One agreed action per group, so the same customer gets the same answer whoever opens the record      |
| Conversation log     | CRM itself                       | Calls, visits and promises you record — the only thing here that is typed in                         |

## The arithmetic, in one place

| NAME                           | WORKED OUT AS                                                         |
|--------------------------------|-----------------------------------------------------------------------|
| Open pipeline                  | every deal still open, added up                                       |
| Likely to close                | for each open deal: value $\times$ the odds of its stage              |
| Win rate                       | deals won $\div$ (deals won + deals lost) $\times$ 100                |
| Worth $\times$ odds (per deal) | deal value $\times$ stage odds                                        |
| Customer worth                 | all their orders – everything they returned                           |
| Return %                       | returned value $\div$ gross ordered $\times$ 100                      |
| Average order value            | customer worth $\div$ number of orders                                |
| Last order age                 | today – the date of their newest order                                |
| Repeat rate                    | customers with 2+ orders $\div$ customers with any order $\times$ 100 |
| Total customer worth           | every order ever placed – everything ever returned                    |

Every figure is rounded to two decimal places at the moment it is calculated, so a total can never disagree with the rows above it by a stray paisa — and the segment values always add up to the total customer worth. Both are self-tests.

# The 29 self-tests, in full

These run every time the app opens, **before** anything is shown. Menu → **Backup & Health** to see them live. They are written in plain language on purpose — you should be able to read what was checked.

| RESULT | WHAT WAS CHECKED                                                |
|--------|-----------------------------------------------------------------|
| ✓ pass | every open deal sits in a real stage                            |
| ✓ pass | open pipeline = the open deals added up                         |
| ✓ pass | weighted pipeline = each deal × its stage odds                  |
| ✓ pass | weighted pipeline is never more than the raw pipeline           |
| ✓ pass | stage totals add up to the whole pipeline                       |
| ✓ pass | win rate = won ÷ (won + lost)                                   |
| ✓ pass | a lost deal is never counted in the pipeline                    |
| ✓ pass | moving a deal on advances it exactly one stage                  |
| ✓ pass | moving a deal on raises its weighted value                      |
| ✓ pass | winning a deal takes it out of the open pipeline                |
| ✓ pass | winning a deal adds its value to the won total                  |
| ✓ pass | a customer's worth = their orders minus their returns           |
| ✓ pass | order count matches the order list                              |
| ✓ pass | total customer worth = every order minus every return           |
| ✓ pass | average order value = worth ÷ number of orders                  |
| ✓ pass | return rate is always between 0 and 100                         |
| ✓ pass | nobody has a negative last-order age                            |
| ✓ pass | repeat rate = customers who bought twice ÷ customers who bought |
| ✓ pass | every customer lands in exactly one segment                     |
| ✓ pass | segment counts add up to the number of customers                |
| ✓ pass | segment values add up to the total customer worth               |
| ✓ pass | a Champion has bought 4+ times and bought recently              |
| ✓ pass | an At-risk customer has not ordered in 90 days                  |
| ✓ pass | a Sleeping customer has not ordered in 180 days                 |
| ✓ pass | every segment has an offer written for it                       |
| ✓ pass | a customer's channel mix adds up to their gross                 |
| ✓ pass | a customer's channel mix adds up to their worth                 |
| ✓ pass | a logged note appears on that customer                          |
| ✓ pass | a logged note appears on nobody else                            |

# How to run it, and what it will not do

## Running it

1. **Windows:** extract the ZIP, then double-click `CRM_Customer_360.html`. It opens in your browser. That is the whole installation.
2. **Mac:** unpack the ZIP, double-click the file. Safari opens it.
3. **Android:** Files app → Downloads → tap the file → open with Chrome. Then ⋮ → **Add to Home screen** and it behaves like any other app.
4. **iPhone / iPad:** Files app → tap the file → Safari. Then Share → **Add to Home Screen**.
5. No internet needed, ever. No account, no licence key, no setup wizard.

## Keeping your data safe

Your leads, your customers and every note you have logged live in your own browser on your own device — nowhere else, and never on anybody's server. That means nobody can see them, and also that clearing your browser's site data would erase them. So: **Backup & Health** → **Export JSON**, once a week. To move to another device, take the file and the backup with you and use **Import JSON**.

*Backup & Health — your data controls, and the live test results below them.*

## What it will not do

- ▶ It does not send emails or WhatsApp messages. It tells you who to contact and why; you contact them.
- ▶ It has no user accounts, so it does not track which salesperson owns which deal. That arrives with the hosted version.
- ▶ In this single-file form it does not pull live from your other systems; the hosted version of Medhava is what connects those pipes.
- ▶ It will not stop you putting a silly value on a deal. It checks its own arithmetic, not your judgement.

**Accepted when: the app opens by double-click with no internet · all 29 self-tests show pass · a lead can be added, moved on, won and lost · winning a lead creates the customer immediately · a segment filter changes the list · a note logs against one customer and nobody else · a backup exports and imports cleanly.**
