

UNIFIED ERP — ANY INDUSTRY

Report Builder

Pick · Group · Filter · Run — an answer in three clicks

Module 01 · Dashboard & BI — App 2 of 2

Ask your own data almost any question, without writing a formula and without waiting for anybody. Pick, group, filter, run. Save the question — not the answer — and it recalculates every month on its own.

One file · opens by double-click

Works offline

34 / 34 self-tests pass

Saves the question, not the answer

What this is, and what is inside

The Report Builder lets you ask your own data almost any question — **without writing a formula and without waiting for anybody**.

You do three things: pick what to look at, pick how to arrange it, and optionally leave some of it out. The answer is already on the screen; there is no "generating report" wait.

The idea that makes it worth using: when you save a report you are saving **the question, not the answer**. Save "which mills are past due" today, run it next month, and it tells you about next month.

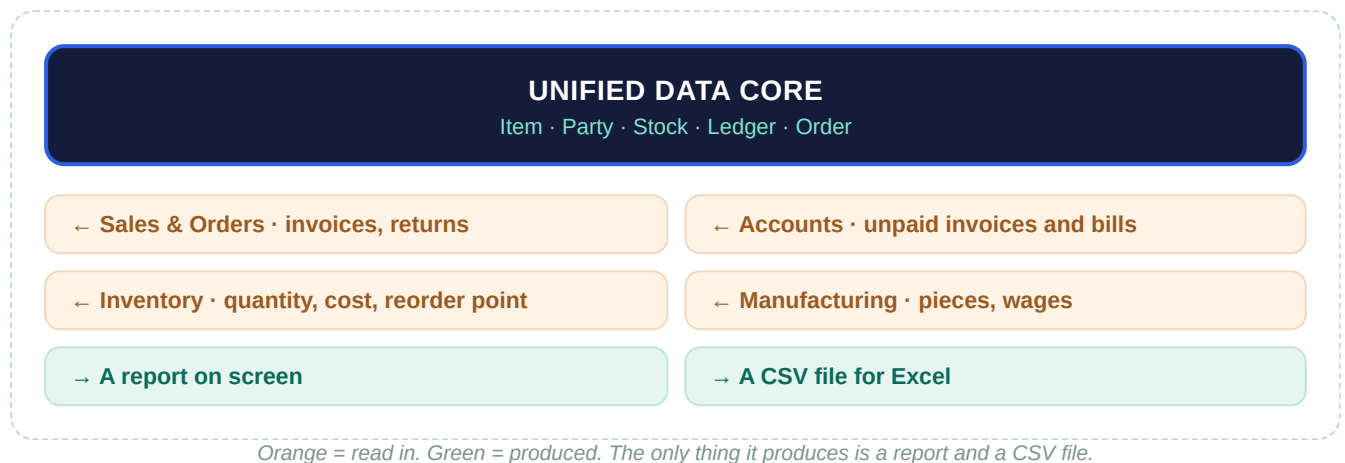

It reads the same records as the CEO Dashboard and applies the same rules, so a report can never disagree with the dashboard. That is not a promise — it is one of the 25 self-tests.

What this document covers

1. What this is, and what is inside
2. Where the Report Builder sits
3. The process — three steps and an answer
4. Screen · Build a report
5. Step 1 · the five things you can look at
6. Step 2 · arranging it (and the Top-N trap)
7. Step 3 · filters, with a worked example
8. The same report, grouped a different way
9. Screen · Ready-made reports
10. A ready-made report, loaded and running
11. Screen · My saved reports
12. Screen · Wiring
13. Exactly what happens when you press Run
14. Connectors — nothing is locked to one company
15. The three rules the app enforces on itself
16. What this app can be wired to
17. The 34 self-tests, in full (1 of 2)
18. The 34 self-tests, in full (2 of 2)
19. How to run it, and what it will not do

Where the Report Builder sits

It stands on the same **shared Data Core** as every other Medhava app, and it only ever reads. Pressing Run never changes a record.

The five sources, and what feeds each one

SOURCE	FED BY	WHAT ONE ROW MEANS
Sales	Sales / Orders module	One row for each channel in each month — gross, returns, net and units
Money owed	Accounts Receivable + Accounts Payable	One row per unpaid customer invoice or supplier bill, with its age in days
Stock	Inventory module + Item master	One row per item — quantity on hand, cost, reorder point and value
Running costs	Accounts / Expense vouchers	One row per cost head per month — rent, salaries, marketing, logistics
Production	Manufacturing module	One row per month — pieces finished and wages booked by the floor

The process — three steps and an answer

The whole app is these three steps. Everything else is a shortcut to them.

- 1

Pick what to look at. Five buttons: Sales, Money owed, Stock, Running costs, Production. Changing this resets the other two steps, because a filter about channels means nothing once you are looking at stock.
- 2

Say how it should be arranged. Group the rows by something (sales by channel to compare channels, or by month to see a trend), sort by any column, biggest or smallest first, and show all rows or just the top few.
- 3

Leave out what you do not want. Add filters like `Gross >= 100000`. Each one appears as a chip you can remove with a click. A record has to satisfy **all** of them.
- 4

Read the answer. It is already there. The badge tells you how many records survived your filters out of how many exist — watch that number when you add a filter, it tells you immediately whether the filter did what you meant.
- 5

Keep it, if it is useful. Give it a name and press Save. Next month, run it again and it recalculates.

A worked example, start to finish

YOU WANT TO KNOW	WHAT YOU CLICK
"Which customers have owed me more than 30 days, worst first?"	
Step 1	Press Money owed
Step 2	Group the rows by Party , sort by Days , biggest first, all rows
Step 3	Add filter: <code>Days > 30</code>
Answer	One row per customer, oldest debt at the top, with the total still owed underneath.

Four clicks and a typed number. No formula, no pivot table, no waiting for anybody — and the same four clicks work next month on next month's figures.

Save report

Saved reports remember the source, grouping, filters and sort — not the numbers. Run one next month and it recalculates on the new data.

The three numbered steps, and the answer waiting at the bottom.

Four things worth noticing on this screen

- ▶ There is no "calculate" button you have to remember. The answer at the bottom is already correct for whatever is selected above it.
- ▶ The grey line under the source buttons always tells you what a single row of that source means — so you are never guessing what you are adding up.
- ▶ The badge in the Result heading ("20 of 20 records") is your safety check. Add a filter and watch it move; if it does not move, your filter matched nothing you meant.
- ▶ The bar in the last column is each row's share of the first measure — the fastest way to see whether one row dominates the total.

Step 1 · the five things you can look at

Press one button. The grey line underneath always tells you what a single row of that source means, so you are never guessing.

SOURCE	ONE ROW IS...	WHAT YOU CAN ADD UP
Sales	One channel in one month	Gross · Returns · Net sales · Units
Money owed	One unpaid customer invoice or supplier bill	Amount · Days
Stock	One item you are holding	Quantity · Value at cost
Running costs	One cost head in one month	Amount
Production	One month on the floor	Pieces made · Wages

What you can group each one by

SOURCE	GROUP THE ROWS BY
Sales	Channel · Month
Money owed	Party · Direction (owed to you / owed by you) · Status
Stock	Item · Status (Reorder now / Getting low / Comfortable)
Running costs	Cost head · Month
Production	Month

Or choose **"Do not group"** on any source to see every single record, one per line — useful when you want to check the detail behind a total.

Step 2 · arranging it (and the Top-N trap)

Four dropdowns, then **Run this report**.

CONTROL	WHAT IT DOES
Group the rows by	The most important choice — it decides what one row of the answer represents.
Sort by	Name (A–Z), any of the number columns, or how many records went into each row.
Order	Biggest first, or smallest first.
Show only top	All rows, or the top 3 / 5 / 10.

The Top-N trap, and how this app avoids it. If you ask for "Top 5", most software shows five rows and then puts a total at the bottom that only adds up those five. That is how people end up quoting a number that is quietly wrong. Here, the table shows five rows but **the Total line still counts every matching row** — and it says so, in words, next to the total. There is a self-test that specifically checks this.

The result panel

- ▶ The badge in the heading — **"20 of 20 records"** — is how many rows survived your filters out of how many exist.
- ▶ One row per group, every measure added up, how many records went into it, and a bar showing its share.
- ▶ The Total line, always over everything that matched.
- ▶ **Download CSV** — top right. Opens in Excel or Google Sheets, and includes the total row.

Which sort makes sense for which question

YOU ARE ASKING	SORT BY	ORDER
Who is biggest?	The money column	Biggest first
What is a trend?	Name (A–Z)	Smallest first — months come out in order
What is worst?	Days, or Returns	Biggest first
What is nearly empty?	Quantity	Smallest first
Where is the volume, not the value?	Records	Biggest first

The habit worth forming: ask the same question two ways — group by channel, then by month. If the two totals agree, you can trust both answers. If they do not, one of your filters is doing something you did not intend.

Step 3 · filters, with a worked example

Below, one filter has been added: `Gross >= 100000`. Look at the record count in the Result heading — it changed the moment the filter was added.

Report run ✓report

Saved reports remember the source, grouping, filters and sort — not the numbers. Run one next month and it recalculates on the new data.

Grouped by month instead. A trend, from exactly the same records.

The total at the bottom is identical to the previous grouping, to the paisa. It has to be — the same records were added up, just piled differently. If regrouping ever changed a total, something would be badly wrong, which is exactly why "grouped totals equal the ungrouped total" is one of the 25 self-tests.

The same records, three useful ways

GROUP BY	ANSWERS	SORT
Channel	Which channel earns most — after returns	Net sales, biggest first
Month	Are we growing, flat, or slipping?	Name, smallest first
Do not group	The detail behind any figure you doubt	Anything — every record is a row

Screen · Ready-made reports

Nine reports already built, each answering a question owners actually ask. Every card tells you what it looks at, how it is grouped and what has been filtered out — nothing is hidden from you.

Reports · Ready-made

Ready-made reports

Questions most owners ask. One click loads it into the builder — then change anything you like.

These are starting points, not fixed reports. Load one, then add a filter or change the grouping and it is yours.

Which channel actually earns the most?

Busy is not the same as profitable. This ranks every channel by net sales — after returns are taken off.

Looks at Sales, grouped by Channel.

Load & run →

Where are returns eating the profit?

Shows only the bigger channels so the return figure next to gross is worth reading.

Looks at Sales, grouped by Channel, filtered on Gross >= 60000.

Load & run →

How is each month trending?

Net sales month by month, oldest to newest, so a dip is obvious.

Looks at Sales, grouped by Month.

Load & run →

Who has not paid me?

Only money coming in, biggest first — your collection call list for the week.

Looks at Money owed, grouped by Party, filtered on Direction is To collect.

Load & run →

What am I about to be chased for?

Supplier bills already past their due date, worst first.

Looks at Money owed, grouped by Party, filtered on Direction is To pay and Days > 0.

Load & run →

Where is my money sitting in stock?

Top 5 items by value at cost — usually where the cash has quietly gone.

Looks at Stock, grouped by Item.

Load & run →

What do I have to reorder now?

Only items at or below their reorder point. This is a purchase list, not a warning.

Looks at Stock, grouped by Item, filtered on Status is Reorder now.

Load & run →

What are my biggest running costs?

Every cost head added up across the year, biggest first.

Looks at Running costs, grouped by Cost head.

Load & run →

Is the floor getting cheaper or dearer?

Pieces made and wages paid, month by month — divide one by the other to see cost per piece moving.

Looks at Production, grouped by Month.

Load & run →

Report run ✓

Press "Load & run →" and it drops into the builder, already run. From there it is yours to change.

These are starting points, not fixed reports. Load one, change the grouping, add a filter, save it under your own name — and it is now your report. Nothing about a ready-made report is locked.

Medhava · Report Builder — Unified ERP — any industry

10 / 20

Save report

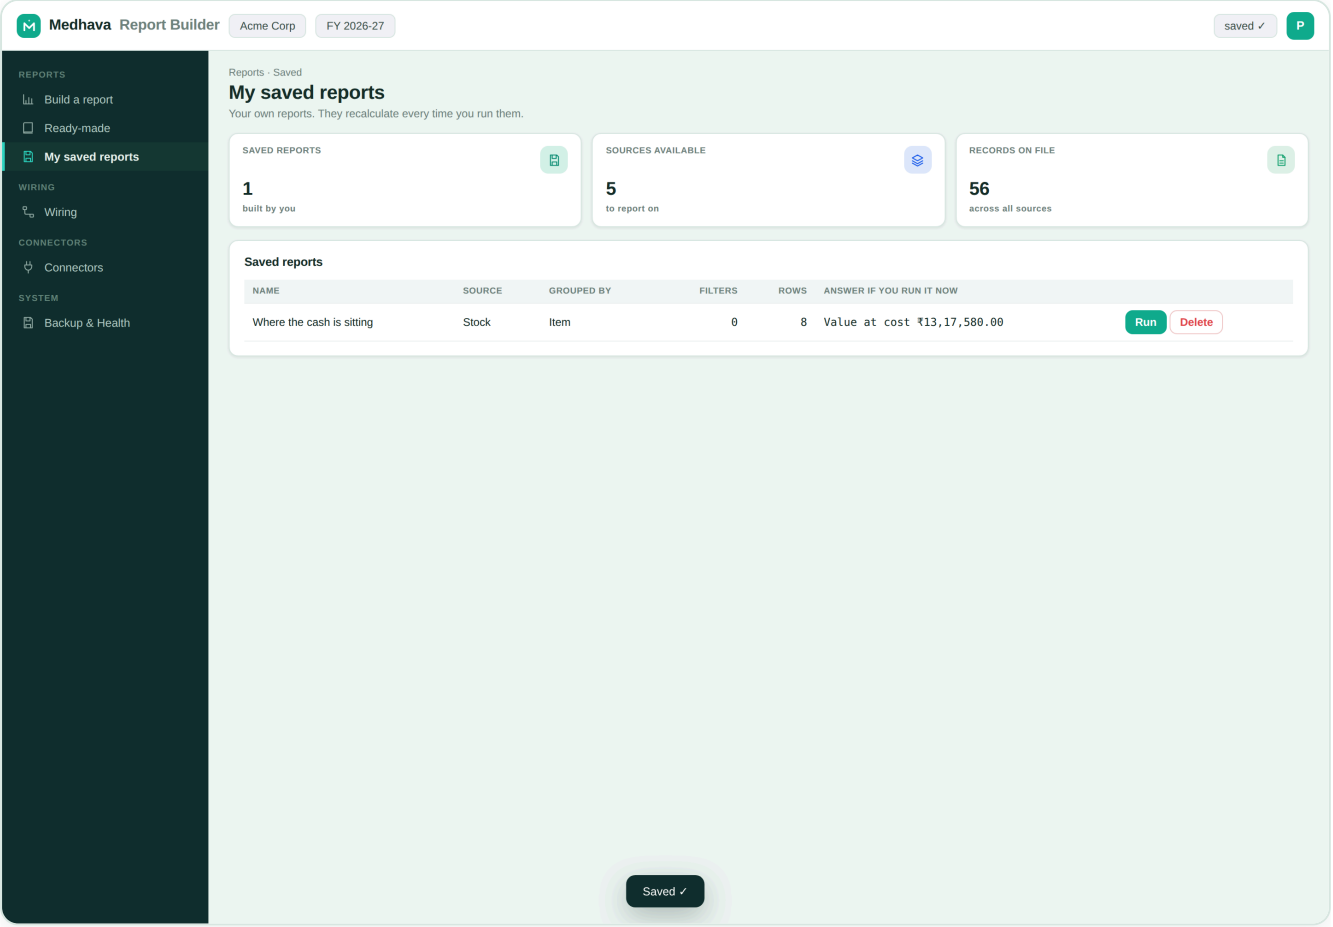

Saved reports remember the source, grouping, filters and sort — not the numbers. Run one next month and it recalculates on the new data.

A ready-made report is just a starting point — every control is still yours to change.

What to change first, once it is loaded

- ▶ Turn "Top 5" into "All rows" if you want the whole picture rather than the headline.
- ▶ Add a filter to narrow it — Status is *Reorder now* turns this from "where is my cash" into "what must I buy".
- ▶ Change the grouping to Status instead of Item, and the same records answer a completely different question.
- ▶ Save it under your own name — you now have a question you never have to rebuild.

Screen · My saved reports

Everything you have saved, with the answer recalculated the moment the screen opens.

The column that makes this screen worth opening: "Answer if you run it now". It is recomputed every time — so this screen doubles as a small dashboard of exactly the questions *you* care about.

- ▶ **Run** loads it back into the builder so you can change it.
- ▶ **Delete** removes it. No undo — but rebuilding takes ten seconds.
- ▶ Saved reports store the source, grouping, filters and sort. **Never the numbers.**

Where every report gets its numbers

The Report Builder stores no figures of its own. It reads the shared Data Core live, every single time you press Run.

Shared Data Core: Item/SKU · Party · Stock · Ledger/Voucher · Order — every module reads and writes these.

The five sources and what feeds them

SOURCE	FED BY	WHAT ONE ROW MEANS
Sales	Sales / Orders module	One row for each channel in each month — gross, returns, net and units
Money owed	Accounts Receivable + Accounts Payable	One row per unpaid customer invoice or supplier bill, with its age in days
Stock	Inventory module + Item master	One row per item — quantity on hand, cost, reorder point and value
Running costs	Accounts / Expense vouchers	One row per cost head per month — rent, salaries, marketing, logistics
Production	Manufacturing module	One row per month — pieces finished and wages booked by the floor

What happens when you press Run

1

The chosen **source** is read fresh from the Data Core — never from a stored copy.

2

Your **filters** drop the rows you did not want.

3

What is left is **grouped** and each measure is added up.

4

The result is **sorted** and trimmed to your Top N — but the Total line still counts every matching row.

5

Saving keeps the **question**, not the answer. Next month the same report shows next month's numbers.

Why the numbers always agree with the dashboard

Both apps read the **same records** and use the **same rules**. A report grouped by channel with no filters adds up to exactly the net sales figure on the CEO Dashboard for the same period.

This is checked automatically — see **Backup & Health**, where the self-tests prove that grouping never changes a total.

Saved ✓

The five sources, what feeds them, and exactly what happens when you press Run.

The Report Builder stores no figures of its own. It holds your saved questions and nothing else. Every number you see was read from the Data Core in the moment the screen was drawn — which is why there is no "last refreshed" timestamp anywhere in this app. There is nothing to refresh.

Exactly what happens when you press Run

- 1 **The source is read fresh** from the Data Core — never from a stored copy, never from a cache. If a record changed a second ago, it is in this report.
- 2 **Your filters drop the rows you did not want.** A record must satisfy every filter, not just one.
- 3 **What is left is grouped** and each measure is added up, rounded to two decimals at the moment of adding.
- 4 **It is sorted, then trimmed** to your Top N — but the Total line still counts every matching row, and says so.
- 5 **Saving keeps the question.** The source, grouping, filters and sort are stored. The numbers are not. Next month the same report shows next month's answer.

Why a report can never disagree with the CEO Dashboard

Both apps read the same records and apply the same rules — the same rounding, the same "returns come off before net". A Sales report grouped by channel with no filters adds up to exactly the net sales figure the Dashboard shows for the same period.

This is checked automatically. Among the 25 self-tests: **"grouped totals equal the ungrouped total"** and **"ungrouped and grouped give the same total"**. If grouping ever changed a total, the app would tell you on startup.

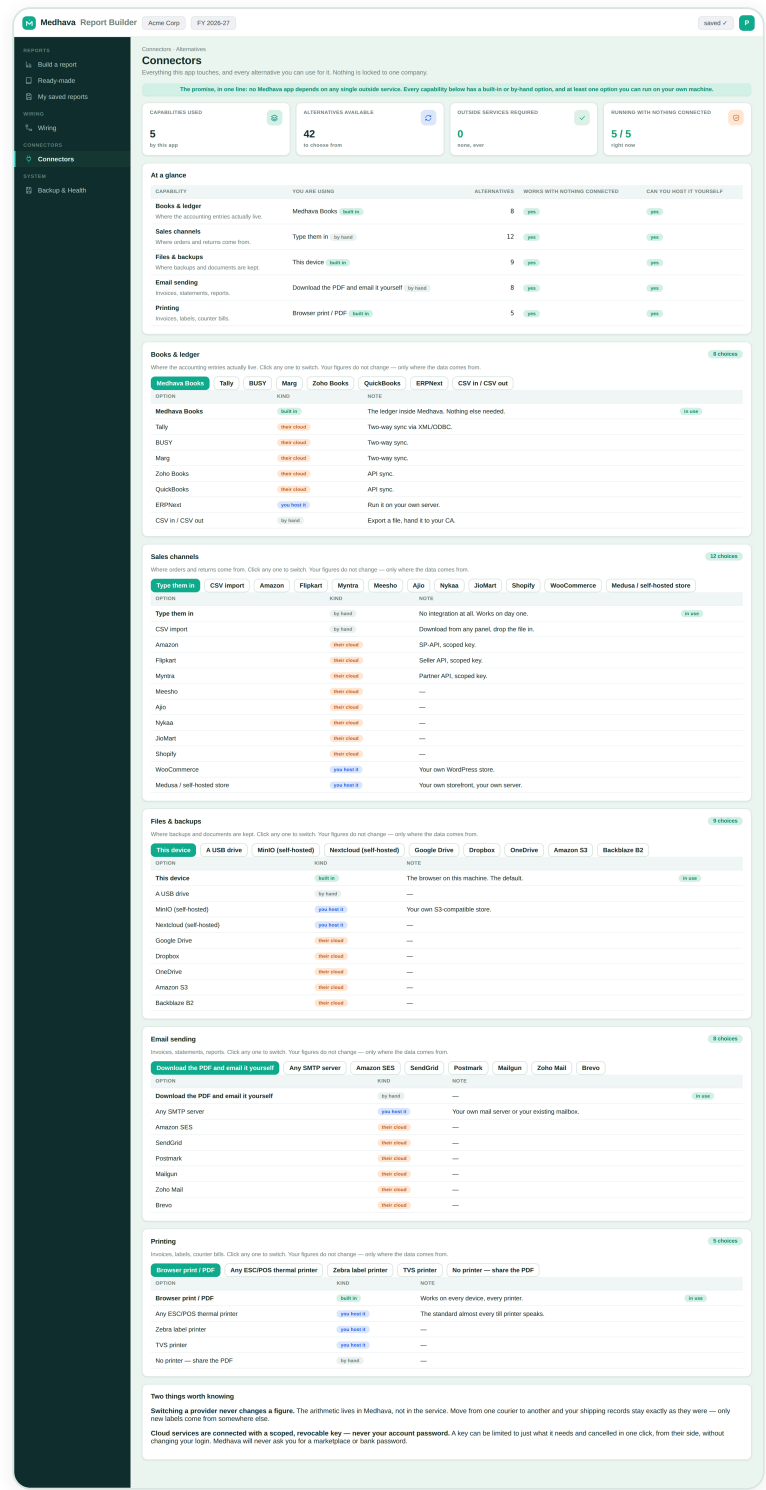

What a saved report actually stores

STORED	NOT STORED
Which source you chose	Any number
What you grouped by	Any row of the answer
Every filter, exactly as typed	The date you last ran it
The sort column and direction	Anything about your records
Your Top-N limit	

This is why a saved report is safe to keep forever. It cannot go stale, because there is nothing in it that could age. It is a question, written down.

Connectors — nothing is locked to one company

This is the promise, and the app checks it on itself every time it opens: **no Medhava app depends on any single outside service.** Not one accounting package, not one marketplace, not one AI company, not one automation tool, not one courier.

"Outside services required: 0" is not a marketing line — it is one of this app's self-tests.

The three rules the app enforces on itself

- 1 No capability has only one choice.** Every one has at least three; most have eight to twelve.
- 2 Every capability has a built-in or by-hand option** — so the app is fully usable with **nothing connected at all**. No account anywhere, no internet, no subscription. That is how it ships, and it is the default it starts on.
- 3 Every capability has an option you can host yourself** — so you are never forced to send your business data to somebody else's cloud, whatever the fashion of the day is.

All three appear as ordinary self-tests on the **Backup & Health** screen, in plain English, alongside the rest — so you can confirm them yourself in five seconds.

Switching a provider never changes a figure. The arithmetic lives in Medhava, not in the service. Move from one courier to another and every past shipping record stays exactly as it was — only new labels come from somewhere else. There is a self-test for exactly this: *"switching a provider changes nothing else in your data"*.

What the four tags on the screen mean

TAG	WHAT IT MEANS FOR YOU
built in	Ships inside Medhava. Needs nothing, costs nothing, works offline.
you host it	You run it on your own machine or server. Your data never leaves your control.
their cloud	Somebody else's service, connected with a scoped, revocable key.
by hand	A person does it, or a CSV goes in and out. Always available.

Why this rule exists at all. Software that can only work with one outside company is not a tool you own — it is a bet on somebody else staying cheap, staying available and staying in business. Every capability here has a way out, including a way that needs nobody.

What this app can be wired to

The Report Builder uses **5** capabilities and offers **42** alternatives across them. Every one is a button on the Connectors screen — click it and you have switched.

CAPABILITY	THE OPTIONS, IN FULL
Books & ledger	Medhava Books (built in) · Tally · BUSY · Marg · Zoho Books · QuickBooks · ERPNext (self-hosted) · CSV to your CA
Sales channels	Type them in · CSV import · Amazon · Flipkart · Myntra · Meesho · Ajio · Nykaa · JioMart · Shopify · WooCommerce · your own store
Files & backups	This device · a USB drive · MinIO or Nextcloud (self-hosted) · Google Drive · Dropbox · OneDrive · Amazon S3 · Backblaze B2
Email sending	Download and send it yourself · any SMTP server · Amazon SES · SendGrid · Postmark · Mailgun · Zoho Mail · Brevo
Printing	Browser print / PDF · any ESC/POS thermal printer · Zebra · TVS · no printer at all

Cloud services use a scoped, revocable key — never your password. A key can be limited to only what it needs and cancelled in one click from the service's own side, without touching your login. **Medhava will never ask you for a marketplace, bank or account password.** If any screen ever does, it is not Medhava.

What if the tool you use is not on the list?

Then it becomes one more button. A provider is a small adapter — read from there, write to there — and the app around it does not change, because the arithmetic never lived in the provider. Adding one does not touch a single figure, a single screen or a single self-test.

WHEN A PROVIDER IS ADDED OR SWAPPED	WHAT HAPPENS
Your existing records	Untouched. Nothing is migrated, because nothing was stored in the provider.
Every figure on every screen	Identical — there is a self-test that proves this.
Your saved work and settings	Untouched.
The self-tests	Same list, same names, still passing.
What you have to relearn	Nothing. The screens do not change.

The practical version of the promise: if a service you use doubles its price, changes its terms, or shuts down, you click a different button. You do not change software, you do not re-enter data, and you do not lose a day.

The 34 self-tests, in full (1 of 2)

These run every time the app opens, **before** anything is shown. Menu → **Backup & Health** to see them live. They are written in plain language on purpose — you should be able to read what was checked.

RESULT	WHAT WAS CHECKED
✓ pass	sales source has one row per channel per month
✓ pass	grouping by channel gives one row per channel
✓ pass	grouped totals equal the ungrouped total
✓ pass	net = gross – returns on every row
✓ pass	sorted biggest first
✓ pass	sorting smallest first reverses the order
✓ pass	Top 3 shows exactly 3 rows
✓ pass	Top 3 still totals ALL matching rows, not just 3
✓ pass	a filter cuts the records down
✓ pass	filtering to one channel leaves one group
✓ pass	a number filter (gross ≥ 1,50,000) works
✓ pass	"contains" matches part of a word
✓ pass	"is not" is the opposite of "is"
✓ pass	money report: "to collect" equals the receivables total
✓ pass	stock report values every item at qty × cost
✓ pass	items at or below reorder are flagged "Reorder now"
✓ pass	running costs by head add up to the same total

The 34 self-tests, in full (2 of 2)

Continued. The last group are the **Connectors** checks — the ones that keep the no-lock-in promise honest.

RESULT	WHAT WAS CHECKED
✓ pass	"do not group" shows every single record
✓ pass	ungrouped and grouped give the same total
✓ pass	CSV has a header, every row, and a total line
✓ pass	CSV wraps anything containing a comma in quotes
✓ pass	every ready-made report runs without error
✓ pass	every ready-made report returns at least one row
✓ pass	a saved report reruns to the same answer
✓ pass	all five sources return rows
✓ pass	every capability this app uses is a known one
✓ pass	no capability offers only one choice
✓ pass	every capability works with nothing connected (built-in or by hand)
✓ pass	every capability has an option you can host yourself
✓ pass	exactly one provider is active per capability
✓ pass	the default provider never needs an outside service
✓ pass	no single company is unavoidable across capabilities
✓ pass	switching a provider changes which one is active
✓ pass	switching a provider changes nothing else in your data

If you ever see a red "fail", stop trusting the numbers on screen. Take a backup, reload the file, and report which line failed. Software that tells you when it is broken is worth more than software that is quietly wrong.

How to run it, and what it will not do

Running it

1. **Windows:** extract the ZIP, then double-click `Report_Builder.html`.
2. **Mac:** unpack the ZIP, double-click the file. Safari opens it.
3. **Android:** Files app → Downloads → tap the file → open with Chrome. Then ⋮ → **Add to Home screen**.
4. **iPhone / iPad:** Files app → tap the file → Safari. Then Share → **Add to Home Screen**.
5. No internet needed. No account, no licence key, no setup wizard.

Keeping your data safe

Your figures and your saved reports live in your own browser on your own device. Take a backup weekly: **Backup & Health** → **Export JSON**. To move to another device, carry the app file and the backup, then **Import JSON**.

What it will not do

- ▶ It does not email reports on a schedule — download the CSV and send it.
- ▶ It does not draw charts beyond the share bars; the CSV opens in Excel for anything more elaborate.
- ▶ It does not sync between your devices on its own.
- ▶ In this single-file form it does not pull live from your other systems; the hosted version of Medhava is what connects those pipes.

Accepted when: the app opens by double-click with no internet · all 34 self-tests show pass · a filter changes the record count · Top 5 still totals every matching row · a saved report reruns and matches · the CSV opens in Excel with the total row intact.
